

I would like to ask you to please do not grant the CTIA permission to remove more local zoning authority. There is mounting evidence that cell phone radiation is harmful to people's health and even governments in other countries (Canada) are issuing warnings asking people to limit children's exposure to cell phones. I have a particular interest in this issue as I am very sensitive to cell phone radiation. If I am within 2 feet of a cell phone, I feel disoriented, and my nervous system feels very agitated. I avoid them, I do not use them, I do not have one. We will look back upon the spread of wireless technology the way we now look back on the use of thalidomide for pregnant women and say..."that was a mistake". Please do not create the possibility for this radiation to spread in intensity and range, until it has been made more safe.

Thank you,

Sandra
