M2 PRESSWIRE-JULY 19, 2007-News Flash: AT&T Announces Expansion of Wireless Coverage in Tennessee
©1994-2007 M2 COMMUNICATIONS LTD

Market Gainer is quickly emerging as the one stop shop for international small-cap investors looking to stay a step ahead of the markets. Activity on the NYSE market has brought this company to the attention of our research team. AT&T Inc. (NYSE: T), is responding to the attention of investors. Our goal is to create a community of international investors who consistently and effectively capitalize on the enormous gains the small-cap Canadian and American exchanges offer.

July 19 - AT&T (NYSE: T), the nation's largest wireless carrier, has announced an investment of more than \$13 million in Tennessee's wireless network in 2007. This brings AT&T's three-year investment in Tennessee to more than \$400 million.

AT&T has delivered dramatic changes in Tennessee through the introduction of a blazing-fast 3G network; the synergies that come from being part of AT&T, the world's largest communications company; and the company's continuing efforts to expand and enhance its network operations.

"We are accelerating the changes that our customers see and experience in Tennessee, and that's as exciting for the company as it is for customers and employees," said Jim Thorpe, AT&T's vice president/general manager for wireless operations in Tennessee and Kentucky.

"Our goal is to ensure that AT&T customers have the very best wireless experience possible – which includes unmatched coverage and quality of service," Thorpe said. "We have been working hard for many years to enhance service for our customers and to provide the best value calling plans and cutting-edge wireless devices."

Network enhancements planned for 2007 in Tennessee include:

-- Four cell sites in and around Clarksville and Fort Campbell Army base. These sites will provide needed coverage

News Flash: AT&T Announces Expansion of Wireless Coverage in Tennessee M2 Presswire July 19, 2007

across the residential area and the Operations areas of Fort Campbell and in nearby Clarksville.

-- A new site in the Sunny Brook community in Sullivan County in Tennessee will improve coverage in and near the community, as well as greatly improving coverage along U.S. Highway 11E.

-- A new site near Monteagle will improve coverage along Interstate 24.

-- A new site in Chattanooga will improve coverage in and around Hamilton Place Mall, as well as the surrounding retail areas. Coverage along Igou Gap and Gunbarrel Road will also be improved.

An important addition to AT&T's wireless network was the launching of broadband 3G service in 2006. This third-generation service now gives Nashville, Knoxville and Memphis customers access to DSL-type speeds for their laptops, with the ability to access the Internet and work with e-mail from anywhere within the 3G network. Handset customers have access to the latest entertainment, news and weather programming through AT&T Viden and AT&T Music.

"The versatility of our network is unsurpassed," Thorpe said. "Since our network is based on the GSM standard, if a customer leaves our 3G service footprint, they will automatically convert to our EDGE network -- the largest high speed data network in the country. With other services, a customer could lose their access until they re-enter a comparable network." AT&T customers also can browse the Web and perform other data functions in more than 130 countries and can make a phone call in more than 190 countries and territories.

AT&T diligently monitors the quality and coverage of its network. In addition to third-party vendors who assess the company's network performance, AT&T network engineers constantly monitor the network and drive approximately 450,000 miles of highway across Tennessee, Kentucky and southern Indiana each year to ensure the network is operating at peak efficiency. That's equivalent to more than 17 trips around the world.

Thorpe said consumers received an immediate boost as a result of AT&T's growth through the new AT&T Unity(SM) plans. Subscribers to this plan have the ability to call all AT&T landline and wireless customers at no additional charge, for a free calling community of more than 100 million people.

AT&T's wireless stores also have been offering products, such as high speed Internet, since 2006. Thorpe said the addition of AT&T products to wireless stores is only a small part of the benefit that comes from AT&T's growth. Here in Tennessee, there are 48 AT&T company-owned stores.

"Through our ability to combine wireless and wireline networks, AT&T is accelerating the convergence of new voice, data and video services that will lead the industry's shift to next-generation, Internet Protocol-based technologies," Thorpe said. "IP is the new foundation of our business and enables us to give consumers and businesses what they are demanding -- 24/7 access to any content or application on any device, wired or wireless."

The rebranded 1,800 AT&T-owned stores signal more than a change of company name, it reflects the new direction of AT&T. The iPhone, an AT&T exclusive product, combines three amazing products -- a mobile phone, a widescreen iPod and a breakthrough Internet device. The iPhone combines both communications and entertainment and represents the future of mobile phones.

"The bottom line is that AT&T is the premier wireless company in the country," Thorpe said. "We're off to a great start already, and the future promises to be very exciting for Tennessee."

LOAD-DATE: July 19, 2007

AT&T Expanding Wireless, Broadband Coverage in Tennessee; Investing \$62 Million in Network Upgrades in 2008

Company Deploying 43 New Cell Sites in Tennessee This Year; Investments in Wired and Wireless Networks Tops \$3 Billion Over the Past 10 Years

Nashville, Tennessee, February 19, 2008

AT&T Inc. (NYSE:T) announced today an investment of more than \$62 million in the Tennessee network to expand wireless coverage

AT&T will add 43 new cell sites in the state this year and roll out its higher speed wireless network by the end of 2008. There are more than 1,500 cell sites currently operated in the state. The new cell sites are part of AT&T's \$62 million statewide wireless investment for 2008.

In the past 10 years, AT&T has spent more than \$3 billion on its wireless and wired networks in Tennessee.

"High-quality coverage and the ability to communicate wherever you are and however you want — those are our goals," said Jim Thorpe, vice president and general manager for AT&T's wireless operations for Tennessee and Kentucky. "Customers rely on us for exceptional service, and this investment is a testament that being the best communications and entertainment company for our customers is paramount."

AT&T has delivered dramatic changes in Tennessee through the introduction of its third-generation (3G) wireless broadband network. This year, AT&T will expand its wireless 3G network in the U.S. to more than 80 additional cities, including Bristol and Chattanooga. This planned expansion will bring AT&T 3G wireless services to nearly 350 leading U.S. markets by the end of 2008, including all of the top 100 U.S. cities.

AT&T's 3G wireless network makes it possible for customers to use their 3G handsets to quickly access feature-rich wireless content, including videos, games, pictures and the latest music, entertainment, news and weather, through MEdia Net, the company's mobile Internet portal. AT&T 3G customers also can take advantage of Video Share, a first-of-its-kind technology in the U.S. that allows users to share live video during a wireless call. Additionally, the AT&T 3G network offers AT&T LaptopConnect mobile customers fast speeds for their laptops, with the ability to send and receive large files and access the Internet, their company's intranet or corporate e-mail from anywhere within the 3G network.

"We're committed to our investments in the state of Tennessee," said Gregg Morton, president of AT&T Tennessee. "Our \$3 billion investment in the network over the past 10 years will have a positive impact at both the state and community levels, in addition to the benefits that our customers will receive."

In 2008, new sites and other network enhancements will be deployed to expand wireless coverage for consumers and businesses including:

Ingram, which covers the southern area of West Memphis from Highway 70 south to Wynaoke, Ark. Bartlett and Arlington, off Highway 70 and Germantown Road in western Tennessee. Clarksville and the Fort Campbell Army Base.

Bristol, in the Tri Cities area, which covers Johnson City Mall and Volunteer Parkway near Highway 11E. This provides improved coverage for the NASCAR races at Bristol Motor Speedway and neighboring subdivisions in the area.

Bechtgrove and Sholder Ridge. New sites will improve coverage in these communities and along Interstate 24. Manchester and Felham. The sites will provide greater coverage in these communities, along I-24 and the Arnold Engineering Development Center/Arnold Air Force Base.

Areas near Hunter Road between Oaktown and Harrison in northwestern Hamilton County. Coverage also includes Cluckamauga Lake, Harrison Bay State Park and additional coverage in northern Georgia, near the intersection of Poplar Springs and Trid roads.

AT&T diligently monitors the quality and coverage of its wireless network. In addition to third-party vendors that assess the company's network performance, AT&T engineers constantly monitor the network and drive approximately 450,000 miles annually across Tennessee, North Carolina and Southern Indiana to ensure that the network is operating at peak efficiency. That's equivalent to driving about 17 times around the world.

AT&T's network is powered by the Global System for Mobile Communications (GSM) technology, the most open and widely used network platform in the world. AT&T plans to complete the nation's first High Speed Uplink Packet Access (HSUPA)-enabled network by the middle of the year. HSUPA substantially increases upload speeds on the 3G network, allowing AT&T's HSUPA-enabled laptop users to take pictures and upload files and take full advantage of the latest interactive Internet and business applications.
