

have you seen this picture?

http://upload.wikimedia.org/wikipedia/commons/d/d2/Internet_map_1024.jpg

A map of the internet might seem a useful tool? Knowing all that pathways from this ip to that ip extending all knowledge to you instantaneously. With crossing routes navigable by broadband speed nothing is outside your potential.

That image you see only represents only 30% of the Class C networks in 2005. I could only imagine the complexity and beauty of a map of the complete internet. It would look like a brain; pulsing nerves spreading data throughout the whole world! The end of net neutrality means the end of this most magnificent invention by cutting away the parts of the brain that don't satisfy Cooperate America.

-RuntimeErrorBoy

Don't worry we will only kill the parts of the brain that will hurt you. Uh, or us.
