

We operate a WISP in rural Utah serving the rural communities surrounding Ogden, Layton and Salt Lake City.

We feel that the "Licensed-Lite" proposal for the TV White Spaces use will further enhance the way rural America receives their Internet and mobile data services.

This proposed use can reach customers that were once unreachable because of economics and geography.

It will foster new jobs, small business growth and reinvestment into the rural areas of America.

It is priceless to install broadband services in rural homes across our region where they have only been able to get dial-up service, but very discouraging to tell others that we cannot get them service because of their location.

We are optimistic that this new "Licensed-Lite" TV White Spaces proposal has the potential to fill in the gaps and strengthen the wireless broadband products our company currently uses to feed rural Utah areas with broadband services.

PLEASE vote in favor of the Licensed-Lite proposal.

Regards,

Douglas Clark
