

"Comment on the inclusion of terrestrial broadcast, including IBOC, into satellite receivers." My position on this is that the FCC should not take a position concerning this matter. Requiring receiver manufactures to include Satellite, AM, FM, IBOC, wi-fi, bluetooth or any combination would result in drastically increased prices for receivers at a time when consumers will be unwilling to pay the increased prices. The result could be the "final nail" in terrestrial broadcastings "coffin". Mandates simply do not work(as we have seen with the DTV transition).The appropriate solution to this problem is to let the marketplace decide. It may take longer to resolve the problem, but as a wise man once said" If you don't know what to do, don't do anything".
