

The Commission has the knowledge, experience and the overall where-with-all to have the existing two satellite delivered direct digital audio radio broadcasters (SDARS) consider other pro-public radio facilities other than themselves. Please do not allow any of the SDAR companies to simply wave off other existing public and private terrestrial based analog and digital modulated AM and FM signals by quietly not offering those receiver choices in their "receivers". Digital FM and soon to be digital AM signals will re-energize the existing radio world as we know it. More programming, more services should be accessible via this very simple and inexpensive addition to the SDAR's "radios" where at the push of the button, fee-less digital radio can be had. Such a positive decision of this type would promote and foster a stronger and more open-frame diverse radio climate for our country.
