

On behalf of the residents of the Village of Riverside, the Riverside Cable Commission, and the Village management, we are petitioning the FCC to Preserve PEG Channels.

Our understanding is that the FCC has opened a case on preserving PEG channels as they have always been provided to thwart attempts by AT&T, Comcast and others to make these channels hard to find (via high channel numbers and multi-level menus), hard to view (poor quality) and hard on the wallet (some people will have to pay to view them).

We want to be clear that all cable providers should recognize that these comments show that keeping PEG channels viable is important to our residents.
