

We want to see TVGuardian Technology made available to us as consumers. To our knowledge this is the only option we have to protect the freedoms program producers need to have and yet provide us with the choices we need. We want to see TVGuardian Technology improved and made more widely available by on cable and satellite boxes, computer software, cell phones, ipods, DVD Players, etc. We have viewed programs and found that when closed-captioning is used to filter the programs it is not accurate enough for the TVGuardian Technology to be useful. It is my projection that unless action is taken to assure that TVGuardian Technology is built into these programs and equipment, it may become obsolete. We have recently replaced 3 televisions with new HDTV units and our TVGuardian stand alone units will not work with them. TVGuardian must be a requirement to be built into cable and satellite boxes and/or HDTV equipment, computers, cell phones, ipods, etc. There are too many programs that we could be enjoying, learning from and using that we simply do not watch because of the lack of the development of this technology. While I believe this feature should have been an FCC Requirement for some time now at no cost to the consumer, I personally would be willing to pay a few dollars each month for the TVGuardian feature in our cable boxes. This technology is available now and if making it an FCC regulation is the only way these companies will offer it, it must be done.
