

I want the FCC to know my position on whether advanced parental control technology should be made available for filtering offensive content in TV programming and movies; whether viewed on TV, over the Internet, cable, satellite, DVD Players, Blu-Ray Players, gaming consoles, or other video devices...

Please give families this essential control! Children must be protected! There are too many current avenues of media available these days, and this would offer parents more hope of raising children with values and standards.

Thank you!

Bernice Bowes
