

I admit most but not all of my neighbors are of the older/ elderly generation, but more and more families with children are moving in and building new homes. There is a need for broadband here for educational purposes. I am a college student at the Tennessee technology center at Hohenwald and I need an internet access that is fast for my Computer Operations Technology course of study. I understand that the rural broadband initiative will be by cellphone data plans but in my local community we cannot even send a text message by cellphone. I have spoken to a ATT/ BellSouth repairman and he stated that the ATT/BellSouth company will use the stimulus funding to upgrade the infrastructure in the metropolitan areas and avoid the rural areas such as mine. Please assist me and the families in my area to achieve our endeavors for a better education.

Thank you;

Robert L. Naramore Jr.
