

Hello, I have 5 TVs in my home and a projector for my home theater. I have language filters all all 6 of the above (3 TV Guardian boxes, an 3 ProtecTV boxes). They have proved to be valuable, irreplaceable and very accurate for our TV viewing. On some shows, a few 4 letter words are missed, but most are captured. My wife and I had reduced our household to rated G movies, which were all kiddie movies and cartoons. Since we purchased our language filters off of ebay, we have been able to watch all of the latest movies with our kids (like Transformers, Spider Man, Fantastic 4, etc). The language filters have liberated our household since we are adamant about not allowing all the foul language from the TV in our home. We also own a daycare, had have 2 filter devices on the 2 TVs at the daycare. We have not gone to HDTV because our filters do not work on HDTV. Also, some of the movie makers (mainly Universal) do not use standard captioning, thus we are not able to watch their movies. We would love to have language filters made available for all TVs, via the TV itself or our cable provider. We are willing to pay for this service as it is that valuable to us as a family. Also, if some standard is imposed for close captioning, the filters would work for all programming and movies. Please help make this happen. Thank you, The Suiter Family.
