

Dear FCC,

As a person who works in Public Safety communications and fully understand what limited bandwidth is available to them. I am supporting Mr Moncure of RadioSoft comments. There is so much congestion for public safety users, that includes Fire, Police, EMS and Highways. These UHF 470-512 MHz channels are needed. My local town needs several more UHF channels and currently are unable to get an allocation in the current Public Safety spectrum. Adding Hartford, CT or adding fifteen miles to the proposed 80 miles will help this situation immensely. Other Towns and cities will be left out if the proposed 80 mile limit is passed. There will 30 miles of area that needs these frequencies and TV will not be able to use this spectrum.

Please approve a plan that will included Hartford CT as an urbanized area, and for Public Safety use only.

George Carbonell

East Hartford, CT
