

I urge the FCC to stop the continued growth of IBOC commercial broadcasting on AM. I have no real feelings one way or another where FM is concerned, but IBOC has already prevented me from listening to many AM broadcasts that I used to enjoy. IBOC broadcasts require too much bandwidth and encroach upon other signals. I have come to regard them as another source of radio frequency interference. I would also add that those listeners who crave the high fidelity audio yielded by IBOC AM, there are plenty of other sources for it. There is no need to wipe out the AM radio spectrum with IBOC hash when these listeners can turn to digital FM, satellite or internet alternatives.

Please STOP IBOC broadcasts on AM!!!
