### Spectrum Aggregation Chart: Notes

1. The spectrum screen is based on the standards that the Commission set forth in the *Verizon/ALLTEL Order* and *Sprint/Clearwire Order*: 95 MHz, plus an additional 30 MHz where AWS-1 is currently available, and an additional 20 MHz where BRS is currently available.
2. To determine whether AWS-1 is currently available, data were obtained from the NTIA website ([http://www.ntia.doc.gov/osmhome/reports/specrelo/pdf\\_20081209/data\\_20081209.htm](http://www.ntia.doc.gov/osmhome/reports/specrelo/pdf_20081209/data_20081209.htm)), and all non-confidential fixed locations where the months to relocation were not deleted and greater than zero were then mapped. It was then determined in which counties a transmitter or receiver was located or was crossed by a microwave path.
3. To determine whether BRS is currently available, a review was conducted of the transition initiation plans and completion notices filed in WT Docket No. 06-136.
4. The spectrum totals for AT&T and the divestiture spectrum include AWS-1 only in those counties in which AWS-1 is currently available and thus included in the spectrum screen.
