

Constant in Auburn, N California interruption blacking out of our tv. When we had analog we only had problems with inversion once a year for 2 or 3 minutes. We got analog & digital & some inversion dtv but could switch back to analog. Now we have problems with a black tv screen at least twice a day in a.m. & p.m. Sometimes for as much as an hour & miss wheel & jeopardy etc. Then we miss a.m. news. We often start to watch a program and get 1st 10 mintes & last 15. We are SICK of this. We do NOT feel we should have to pay for a subscription to Dish to get our local stations 3, 10, 13 & sometimes 6 & UHF. We get bay stations most of time when we can Not get local. We have an outdoor high antenna. We've lived here since 1973 & never had these problems getting local channels. Our viewing of television since dtv is Nothing but frustration. Is this what you intended? Please increase the power & what ever else you can do to fix our problem as soon as possible before we just quit watching the bloody tv. Sincerely Lynn
