

Nothing has changed since the last time regarding B.P.L. There are technologies available today to provide "broadband" services to the rural areas of the nation. Please get on the bandwagon and start investigating the viability of fiber optic distribution. It's a proven technology, free of the interference issues that have been the source of opposition, and it's E.M.P. ( electromagnetic pulse ) hardened. Follow science rather than the lobbyists.

Sincerely

John Mattesini
