Federal Communications Commission
Office of the Secretary

Dear Diane:

I am enclosing comments recently received from one of my constituents, Tim Clay. Tim is concerned about UHF gear.

I'd appreciate it if you would contact Him directly and provide what information you can. It would also be very helpful if you could copy my office on any reply that you send. Thanks for your assistance.

Sincerely,

Lamar

I have heard that the federal government is going to be taking over the 700mhz and above frequency bands in February of 2009 for homeland security use. I had a few questions regarding this.

1. Is this true?

2. If this is true will small devices like UHF microphones that operate above 700mhz be against federal law to use?

3. Is the government putting a policy in place to protect consumers, organizations and businesses that have devices that operate in this range? (i.e. manufacturers that made the items must, for a fee, offer to convert the items to under the 700mhz range so that perfectly good equipment doesn't go to waste.)

I am a media director at a church in Collierville, TN this will directly impact my church as well as thousands of churches and other organizations all across the country that use a wide variety of UHF gear. Some type of consumer protection is necessary.
