

The use and public enjoyment of SAT radio is being impinged and interrupted by the interference caused by nearby devices which operate in the adjacent band of SAT radio and should be remediated. Additionally, the 10 year delay in fast tracking Sirius XM repeater licensing (IB Dkt. No. 95-91) is not in the public's advantage and is pressure by the terrestrial radio faction.

Please consider these favorably post haste.

Sincerely,

David Ison
