

Dear FCC:

I am requesting that you deny CTIA's Petition for Declaratory Ruling and stop catering to the cell phone and wireless industries at the expense of local taxpayers. I oppose the CTIA Petition that asks the FCC to approve further limitations on local governments in deciding of new antenna sites. I am also against another instance where the actions of a minimally regulated industry will be allowed to lower property values without my input as a local and federal voter and taxpayer. Also very important, cable and wired alternatives are safer than wireless for the National Broadband Plan for Our Future. Fiber optic is the best internet solution for economic development and for safety, because it doesn't contribute radiofrequency to the environment. Also, please keep wireless off our electric grid from Broadband over Powerlines, and implement wired solutions for SmartGrid and Smart Meter Applications. Please consider my comments.

Sincerely,  
Lina Silimkhan
