

I want to go on record as being opposed to increasing the maximum bandwidth for digital and RTTY to six times the current limit; from 500 Hertz to 3 kHz.

This action would essentially destroy the CW operations of the Amateur Service. Please do not do this, or anything similar, to the code operators here in the U.S.

If you believe Morse code is 'a thing of the past,' just tune in on the code portions of the HF bands during CW contesting periods.

Thank you for considering my comment.
