

Please vote in favor of net neutrality. Private corporations should not have the ability to determine who can access content on the Internet. I value the ability to access any and all information online, and to choose to pay for content based on my own judgments. Allowing ISPs and other corporations to prioritize certain internet traffic and charge for broadband access will mean less development in important and need infrastructure updated, and also lead to less innovation from American citizens who will not be able to pay to create or load content.
