

Cell phone boosters are a necessary product to ensure public safety. There are simply too many areas that do not have adequate cellular coverage.

In 2006, my parents were traveling through a remote part of Utah and came upon an accident where a vehicle rolled off the side of the road. They were the second vehicle to come upon the accident and the driver of the first vehicle on the scene was attempting to call for help but did not have cell service. Luckily my parents had a cell phone booster in their vehicle and were able to make a call and get help on the way.

As long as boosters are produced in a way that does not cause harm to the cellular network, they should definitely be made available to the public so that people can make calls in areas that typically do not have coverage.

Sincerely,

Laine Matthews
