I strongly recommend you to continue to help VRS because it really helps us to communicate with hearing people and technicians and business better than TTY. Most hearing people have no patience to wait and listen because most deaf type about 30 words per minutes while hearing people speak about 150 or more words per minutes. I worked at Government Printing Office in which I had experiences with VP relay relating to my job as IT Specialist. I used it a lot and improved my production at 300 percent. Remember I am not the only person who needed this VP relay and there are millions of people who need it too. I support the Petition to Initiate a Notice and Comment Rulemaking Proceeding filed by the National Association of the Deaf.

Thanks  
Byron Zimmerman
