Jamie A. Barnett (Rear Admiral Retired)
Chief, Public Safety and Homeland Security Bureau
Federal Communications Commission
445 12th Street, SW
Washington DC 20554

Cc: Michael J. Wilhelm, Deputy Chief, Policy Division
Jeannie A. Benfaida

Reference: Region 4 (Arkansas) 800 NPSPAC Rebanding Plan Amendment, PR Docket No. 93-3 and WT Docket No. 02-55

Dear sirs and ma'am,

You will find attached the Region 4 (Arkansas) 800 NPSPAC Rebanding Plan Amendments for your consideration. There are no substantial changes from the previously approved plan, except of course the Rebanding.

As you may be aware, Carl Jacobs, who is the chair for the 800 MHz RPC and the APCO Frequency Advisor for Arkansas, has been ill for a considerable time. Unfortunately, Carl has stepped down from most, if not all, of his duties.

We hope this plan meets with your approval. I apologize for the delay in submitting the plan. Do not hesitate to call on me with any questions.

Sincerely,

J.M. Rowe Vice-Chair
501-767-9492

2009 Revision A Notes:

This document was revised to adjust the frequency information and demographic data as a part of the 800 MHz re-configuration in 2009. The format of the document has been modernized, and sections numbered for easy reference. When new data has been added to bring references up to date, the original information has been replaced with current data where noted.

The 800 MHz committee chair persons in 2009 are.

Region 4 revised 800 MHz Plan

1.0 PROGRAM SCOPE

1.1 Introduction

In December 1983, the United States Congress directed the Federal Communications Commission (FCC) to establish a plan to ensure that the communications needs of state and local public safety authorities would be met. By Notice of Inquiry, over 300 comments were evaluated by the FCC staff. This resulted in the recognition of public safety agency needs and the subsequent allocation of an additional 6 megahertz of spectrum for public safety use nationwide. The FCC also recognized the necessity of developing a National Plan to promote interoperability among public safety providers and to ensure an efficient use of the newly allocated spectrum.

Recognizing the importance of public safety participation in the development of the National Plan, the FCC established the National Public Safety Planning Advisory Committee (NPSPAC) with open membership. NPSPAC provided the opportunity for the public safety community and other interested members of the public to participate in an overall spectrum management approach by recommending policy guidelines, technical standards, and procedures to satisfy public safety needs for the foreseeable future. After consideration of NPSPAC's Final Report and comments filed in Docket No. 87-112, a Report and Order was released by the FCC in December 1987 which established a structure for the National Plan that consists of guidelines for the development of regional plans.

The National Plan reflects the FCC's regulatory objective of maximizing spectrum efficiency and ensuring sufficient flexibility to accommodate specific communications requirements in different areas of the United States. The National Plan will serve as an umbrella under which regional plans can be developed and implemented. The National Plan provides guidelines for the development of regional plans, with as much regional autonomy as possible, to ensure that the needs of all eligibles are considered in the planning process.

1.2 Purpose

Public safety spectrum users within the boundaries of Region 4 recognize that spectrum is a highly valued and limited resource which necessitates an orderly and efficient development of its use. Within Region 4, there are numerous governmental entities (both metropolitan and rural) which require new and/or additional communications capabilities in order to maintain a satisfactory level of public safety services for their citizens.

This Regional Plan was developed with the objective of assuring that unassigned frequencies would be distributed in an equitable fashion to those public safety and special emergency radio service 'eligibles' with the highest demonstrated need and that the frequencies would be assigned and used in the most efficient manner possible.

The purpose of this regional plan is to define, under the umbrella of the National Plan, specific users and their spectrum requirements, regional interoperability requirements, technical and frequency reuse requirements, and other requirements that may be applicable to Region 4 and adjacent regions. This plan provides flexibility to accommodate a wide variety of specific communications requirements which are needed for this region's public safety and special emergency service providers.

1.3 Regional Profile

1.3.1 Geography

The 75 county area included in this Plan is shown in the map below. Region 4 typifies geographical diversity from its rich farmland in the southeast to fairly hilly semi-mountainous terrain in the northwest.

Much of the Region's area is extensive from the standpoint of public safety officer coverage. There are times when only a few officers may be responsible for covering an area greater than several hundred square miles. Appendix 1 "Region 4 - Square Miles and Population By County," gives the square mile area for each county in the region. The total number of square miles in Region 4 is 52,078.

1.3.2 Population, - Current and Projected

The 75 county region has experienced steady, if not dramatic growth during the late 1970's and early 1980's. However, as noted in Appendix 2, "Region 4 - Projected Population and Employment," and Appendix 3, "Region 4 - Population Projections of Arkansas Counties, 1990, 1995 and 2000," the Region will continue to exhibit growth through the year 2000. 32 of 75 counties are projected to experience double digit percentage increases in population. The implications of this growth are that Region 4 will experience added service requirements requiring improved radio communications capabilities.

1.3.3 Housing and Labor Market Trends

The average household size declined from 3.05 in 1970 to 2.62 in 1986, and accompanying the smaller households has been a shift towards multifamily housing.

In 1970, 86 percent of all households resided in single family dwellings. By 1980, that proportion dropped to 79 percent, and is predicted to drop to 71 percent by 2000. This continued trend toward a higher percent of multifamily dwellers and the accompanying high densities of population will impact future police, fire, and emergency medical planning and services.

As a result of rapidly increasing labor force participation among women, population growth will not occur as rapidly as job growth. One implication of the two-earner household is the increased potential for unstable family structures and resultant social consequences. For example, many children will be unsupervised and possibly more prone to commit criminal and mischievous acts. Also, more property is left unprotected because both adults may be away from home.

1.3.4 Emergency Medical Services

Appendix 4, "Region 4 - Emergency Medical Services Information," depicts Emergency Medical Services manpower and selected capabilities in Region 4. It is anticipated that the number of EMS personnel will increase approximately 21 percent during the period 1989-1995. Given this increase, the number of EMS services personnel will be 4828. This increase in personnel will result in a corresponding increase in the need for vehicles, supplies, and communications equipment to handle increased communications traffic.

1.3.5 Law Enforcement Capabilities

Appendix 5, "Region 4 - Number of Full-Time Law Enforcement Employees," reflects the number of sworn and civilian employees in selected jurisdictions as of 1987. The number of law enforcement officers is expected to increase approximately 4 percent during the period 1987 through 1989, resulting in a sworn manpower complement exceeding 3,500 by the beginning of the next decade. The need for additional radio equipment and communications capabilities in the region is obvious and existing systems are often less than adequate to assure reliable, prompt, and accurate communications. Local agencies are willing to examine technological advances in an attempt to remedy existing problems, but there will still be a need

for additional frequencies if citizens are to be effectively served and officers protected.

1.3.6 Index Crime

Not unlike other parts of the county, communities in Region 4 continue to experience an increase in criminal activity and a resulting increase in calls for services. As shown in Appendix 6, "Region 4 Uniform Crime Reporting" the number of Index Crimes reported in the 75 county region has increased from 84,952 in 1983 to 100,986 in 1987 - an increase of 16 percent. The rate per 100,000 population has increased 17.3 percent, from 3,622.8 in 1985 to 4274.9 in 1987. The number of arrests for Index offenses has increased from 17,963 in 1984 to 19,546 in 1987, or a 9.3 percent increase. This is also statewide data for the reported period.

1.3.7 Fire Service Capabilities

Fire service in Region 4 is characterized by a mix of full-time professional officers with a large number of professional volunteer personnel. Appendix 7, "Region 4 - Fire Service Organizations By County and Jurisdiction," reflects the number of organized fire departments available to respond to emergency calls for fire service. Not unlike the law enforcement community, many of the fire departments in Arkansas cannot expand their communications capabilities to meet increasing demands for service. The opportunity to receive additional frequencies will help identify existing impacted frequencies and result in a more effective fire service operation.

1.4 Planning Committee Formation

The development of the public Safety Radio Communications Plan for Region 4 has followed the requirements of the FCC's Report and Order as issued in the matter of General Docket 87-112.

Representatives of the Arkansas public safety community and state and local government personnel began the cooperative regional planning process for Region 4. In accordance with the FCC's Report and Order 87-112, the Associated public Safety Communications Officers Inc. (APCO) recommended to the Commission the appointment of a "Convener" for Arkansas Region 4. Ronnie Rand, Manager, Little Rock Office of Emergency Services, was APCO's appointee. The Commission has defined the limits of Region 4 as a 75 county area which coincides with the state borders of Arkansas (please see page 3). On February 10, 1988, the Region 4 convener issued a public Notice that an initial Region 4 public Safety Planning meeting would be held April 14, 1988, at the Robinson Convention Center (please see Appendix 8). This initial regional planning meeting officially established the Region 4 Planning Committee with Ronnie Rand elected Chairman by the quorum (see minutes of the initial meeting, Appendix 9). All official actions of the Region 4 Planning Committee are attached as Appendix 10.

2.0 AUTHORITY

2.1 Regional Planning Committee

Authority for the Regional Planning Committee to carry out its assigned tasks is derived from the Federal Communications Commission, Report and Order, Docket 87-112. Participants in the formation of the Regional Planning Committee represent interested parties from both the public Safety and Special Emergency Radio Services. A total of 80 individuals have participated in the plan development process. Appendix 10 contains the names, organization affiliations, and mailing addresses of all participants in the Regional Planning Committee formation.

2.2 Plan Review

After compiling all written inputs to the Regional Plan, the Regional Planning Committee reviewed the completed draft in detail. Using the page by page review and explanation procedure by which NPSPAC approved its final report, the Regional Planning Committee approved the draft plan. The draft was then submitted to the appointed conveners and/or planning committee chairmen of the six adjacent regions for their review.

2.3 Conflicts

It is not the intent of this plan to conflict with any current or future rule or regulation of the National Plan as may be applicable by Report and Order of the Federal Communications Commission. In such cases where conflicts may exist, Federal Communications commission rules and regulations shall prevail. Elements of this Plan not expressly prohibited by the FCC become applicable to this region upon the Plan's approval by the Commission. Should future determinations by the Commission void any individual element of this plan, all other elements will remain applicable.

This Plan is not intended to interfere with the work of organizations appointed by the Commission to provide frequency coordination recommendations to the Commission for eligibles covered by the Plan. Instead, it provides a structure by which spectrum conservation and efficiency can be maintained. Resolution of any arising conflict is left to the judgment of the Commission.

2.4 Regional Review Committee

Upon approval of this Plan by the Commission, a Regional Review Committee will be established for the review of new applications, for conducting an annual system implementation, for making action recommendations to the Commission, for the resolution of inter-regional problems, for recommending modifications and amendments to the Plan, and for exercising general oversight of the Plan.

To ensure organizational integrity, the Regional Review Committee shall be attached to and serve under the sponsorship of the four subregions comprising Region 4. At a minimum, each

subregion will be represented by one (1) member, appointed by the regional planning committee chairman, which shall be the chairman of that subregion. Most Committee members will be employees of an official entity responsible, under Arkansas statute, for the preservation of life and property as a matter of public safety.

The Regional Planning Committee Chairman shall serve as chairman of this Committee. At the direction of the Regional Review Committee, the chairman shall forward Regional Plan Modifications and amendments to the Commission for its action. The APCO frequency advisor responsible for Region 4 will serve as an ex-officio, non-voting member of the Committee.

The Regional Review Committee shall establish its rules and operating procedures as it deems necessary. Upon request by any party or upon resignation of the chairman, a public notice will be made in a newspaper of general circulation calling for a meeting of all interested parties to elect a new chairman.

3.0 OPERATIONAL REQUIREMENTS

3.1 Regional Interoperability (Common Channels)

In accordance with the national band plan for 763 – 775 & 793 – 805 MHz, interoperability among federal, state, and local governments during both routine and disaster operations will take place primarily on the five common channels as identified in the National Plan. Additionally, through the use of SW-160 or equivalent agreements, a licensee may permit federal use of a non-federal communications system. Such use, other than the five common channels, is to be in full compliance with the Commission's requirements for government use of non-government frequencies (Title 47 CFR, Sec. 2.103).

Licensees are allowed to count as additional loading, a factor of two percent for federal interoperability agreements.

No channels other than the five national common channels are needed to meet this region's interoperability requirement. The implementation of the common channels designated by the National Plan will be separated into two categories of users: primary and secondary.

Primary Users: (five or more channels)

As a minimum, all primary users shall operate a receiver for continuous monitoring of the national calling channel and a separate mobile relay base station equipped to operate on all five national common channels. All primary users shall maintain a radio watch on the calling channel for the purpose of monitoring the channel and rendering assistance. All common channel equipment shall be equipped to provide an on-street coverage capability of the same size and quality for which the station license was granted. All licensees are encouraged to operate additional base stations on any or all of the four remaining common channels.

Secondary Users: (four or less channels)

All secondary users shall, as a minimum, operate a base station for continuous monitoring of the national calling channel. All secondary users shall maintain a radio watch for the purpose of monitoring and rendering assistance on the calling channel. A secondary user whose area is encompassed by a primary user may apply for a waiver from the Regional Review Committee for full time monitoring of the national calling channel. The secondary user will be required to have a station on the national calling channel.

3.2 Channel Use

Plain language will be used on all five common channels at all times, and the use of unfamiliar terms, phrases or codes will be kept to a minimum, unless deemed necessary for security purposes.

The use of these channels for intra-system normal dispatch and routine agency operations is strictly prohibited. Normally, the five common channels are to be used only for activities requiring communications between agencies not sharing any other compatible communication system. Under emergency situations, one or more tactical channels may be assigned by the controlling agency at the time of the incident.

Users of these channels include federal, state and local disaster management agencies, police, fire, and providers of basic and advanced life support services.

Other eligibles, such as school buses, volunteer emergency corps, Red Cross, Radio Amateur Civil Emergency Service (RACES), Amateur Radio Emergency Service (ARES), Salvation Army, etc., under the National Plan may also participate on a secondary basis in support of the preservation of life and property during an emergency. These eligibles may be called upon by the controlling agency when specifically enrolled in a documented emergency plan of a recognized emergency management agency.

The use of automatic or operator-assisted connection of these common channels to the switched telephone network is prohibited.

3.3 Calling Channels

The calling channel shall be used to contact other users in the region for the purpose of requesting incident related information and assistance. This channel shall not be used as an ongoing working channel. Once contact is made, an agreed upon tactical channel is recommended for continued communications.

3.4 Tactical Channels (ITAC1 – ITAC4)

These channels are reserved for use by those agencies in need of conducting inter agency communications. Incidents requiring multi-agency participation will be coordinated over these channels by the agency controlling the incident. Individual tactical channels may be designated for use by various services or disciplines on an incident basis by the controlling agency.

In the event of multiple incidents requiring the use of these channels, channels shall be designated by mutual agreement between controlling agencies. In no case shall control of these channels remain with any single agency beyond the termination of a declared emergency.

3.5 Coded Squelch

All analog mobile and portable radios operating in the 763 – 775 & 793 – 805 MHz band shall be equipped to operate on the five common channels using CTCSS tone squelch of 156.7 Hz.

All analog mobile relay base stations operating on these common channels shall be equipped to operate using CTCSS tone squelch of 156.7 Hz. They shall be equipped to operate as a mobile relay station on demand, but shall normally operate in the repeat disable mode.

4.0 APPLICATION PROCEDURES

Any request for frequencies to be used for public safety operations (as described in part 90 of the FCC rules and regulations) must be submitted through the FCC authorized coordinator, APCO AFC, Inc.

If adequate spectrum is available, the Regional APCO Frequency Advisor shall review the application to determine its compliance with the regional plan as indicated below.

If there is inadequate spectrum or he anticipates a shortage, the established evaluation procedure shall be instituted. This procedure, "Evaluation Criteria," is outlined in Appendix 13. If approved by the Regional APCO Frequency Advisor, the request for frequencies will be returned to the applicant to be forwarded to the Associated public Safety Communications Officers (APCO) for frequency coordination.

If not approved by the Regional APCO Frequency Advisor, the request will be returned to the applicant for revision and correction before being resubmitted for further consideration. The request shall contain information to justify the frequencies requested and shall demonstrate compliance with the regional plan. As a minimum, this request shall consist of the following:

1. Appropriate Coordination and Licensing Application Forms
2. System Design Information
3. Funding Statement
4. Proposed Implementation Schedule
5. Existing Frequency Statement

The requesting jurisdiction may appeal a negative decision of the Regional APCO Frequency Advisor to the APCO AFC, Inc. Director. If the petitioner is still dissatisfied, he may appeal to the FCC.

Any jurisdiction utilizing an 700/800 MHz trunked radio system licensed before FCC approval of this plan may petition for expansion of an existing system utilizing this spectrum allocation if no other frequencies are available. Such approved expansion would exempt the user from requirements of this plan. The Regional APCO Frequency Advisor will apprise the Director of APCO AFC, Inc.

5.0 EVALUATION PROCEDURES

The Regional APCO Frequency Advisor will review and evaluate each request based on the sufficiency of the information contained in the five sections listed earlier. The information required in each section includes the following:

5.1 System Design

A brief statement of the intended use of the requested frequencies and how they will be integrated into the existing emergency and nonemergency operations will be required. The efficiency of 700/800 MHz frequencies depends greatly upon the design and programming of the system itself. To assist all public safety users in making all systems operate in an efficient manner is the reason this area is being included for review. Specific criteria regarding system parameters are defined in the section, "Technical Design Requirements."

5.2 Funding Statement

The applicant's commitment to implement the system must be ensured to maintain the efficient utilization of these 700/800 MHz frequencies. The funding statement, which will be a resolution from the applicant's governing body, will include the method by which the system will be funded; for example, by Certificates of Obligation or local bond funds.

5.3 Implementation Schedule

The applicant will be requested to furnish a schedule detailing the time period required to implement the proposed communication system, from funding through turn-on and final acceptance. Existing Frequency Statement The applicant should provide an explanation of how existing frequencies will either be used by the applicant or released to other jurisdictions for their use. Time frames for the release of frequencies for reassignment should be included in the implementation schedule submitted with the request.

6.0 TECHNICAL DESIGN REQUIREMENTS

6.1 Coverage Limitation

Antenna Height and Power System coverage or service area is limited to geographical boundaries in order to maintain maximum frequency reuse within the region. Agencies requesting new or additional channels will have their proposed system design evaluated by the Regional Review Committee. Any agency requesting a transmitter location not centrally located within its jurisdiction must include in their request adequate justification for such placement. If a non-centrally located transmitter may result in significant encroachment on surrounding jurisdictions, a directional antenna must be chosen which will minimize this encroachment.

Agencies with service areas outside their political boundaries may request extended system coverage. Such requests for extended coverage must be accompanied by written justification.

Extended coverage systems will not be authorized unless approved by the Regional Review Committee. Favorable consideration will be given to those extended coverage systems which are made available for use by eligibles other than the licensee.

6.2 Definition of Service Area

"System Coverage" or "Service Area" is defined as the boundary where received signal strength falls to 41 dBu. dBu is a measure with one microvolt as a reference.

The value of 41 (~1) dBu was selected by combining receiver sensitivity for 20 dB quieting (-6 dBu or 0.5uV) with a factor of 10 dB for foliage attenuation, 20 dB margin for Rayleigh fading (98 percent probability), and portable body loss of 16 dB.

6.3 Calculation of Service Area

Three factors must be known to determine service area:

- (1) the strength of the received signal, or "received signal strength,"
- (2) antenna height above average terrain (HAAT) , and
- (3) the effective radiated power (ERP).

Received signal strength has been defined, leaving two factors that can be modified to achieve the desired coverage. Tabulated data from Carey propagation curves in Appendix 12 will be used to give the distances to the 41 dBu boundary based on HAAT and ERP. This distance is considered the radius of coverage from the transmitting site. A step-by-step procedure is provided in Appendix 14.

It will be permissible for agencies requesting system authorization to determine the distance to the 41 dBu boundary on a radial-by-radial basis, with a minimum of eight equally spaced radials at 45 degree intervals, beginning at true north, and plot the service area boundary based on these points. This plot may be submitted with the request for frequencies to show that service

areas outside the agencies' political jurisdictions are being kept to a minimum.

In any case, a minimum antenna height of 100 feet above ground elevation will be necessary to provide clearance with roof lines and treetops. Any agency with its transmitter centrally located will be allowed a minimum service area radius of eight (8) miles - regardless of the size of its jurisdiction - as long as interference protection for existing co-channel and adjacent channel systems is sufficient.

6.4 Responsibility for Calculations

It will be the responsibility of the requesting agency to calculate the proposed service area and to validate the accuracy of the calculation.

It is the requesting agency's responsibility to provide accurate system parameters and procure "height above average terrain" radials as specified in 90.309(a) (4) of the Commission's rules.

6.5 Proposed Service Area Exhibit

An agency shall provide, along with its request for frequencies, an exhibit showing the calculated service area and the agency's jurisdictional boundaries. The boundaries must be drawn to scale on a 1:250,000 USGS map with a title block including the name of the requesting agency, height above average terrain, effective radiated power, latitude, longitude, ground elevation of the transmitting site, and the distance to the service area boundary in miles, as calculated. An example is included in Appendix 15 of this Plan.

6.6 Control Station (limit on Effective Radiated Power)

Control stations will be limited to an effective radiated power of no more than 6 dB above that of a mobile unit associated with the system. A list of control station locations, including latitude, longitude, effective radiated power, and height of antenna above ground level shall be provided with the request for frequencies.

6.7 Frequency Reuse

Careful adherence to the system technical design requirements of this Plan will allow for maximum co-channel usage within this region. Because of the close proximity of adjacent channel frequencies, adjacent channel considerations must be planned similar to that of co-channel design.

An agency requesting frequencies that have been previously licensed within this region or an adjacent region must show that their proposed system will operate on an interference-free basis with any existing co-channel system. Requesting agencies must demonstrate that the proposed system will provide an existing to proposed signal margin of at least 35 dB at the service area boundary of the existing system.

The signal strength of the proposed system is to be calculated by the same method as outlined in

"Calculation of Service Area," elsewhere in this Plan. After the distance from the proposed transmitter site to the existing service area contour is determined, the received signal strength of the proposed system can be found in the look-up tables using antenna height, effective radiated power, and distance. If it is determined that the margin of protection is insufficient, the proposed system must be modified to meet the protection criteria. A step-by-step procedure for performing the series of interference calculations is included in Appendix 16.

6.8 Adjacent Channel Design

Proposed systems must also be designed for interference-free operation with adjacent channel licensees. The method of determination is identical to that of co-channel design as detailed in "Co-channel Design," elsewhere in this Plan, with the exception of the existing to proposed signal margin criteria.

In the case of adjacent channel systems, this margin will be reduced to 15 dB. All other calculations will remain the same. It should be noted that the FCC has adopted technical standards for transmitters which will reduce adjacent channel interference and permit closer geographical adjacent channel use; however, the Commission has not adopted improved receiver technical standards. It is the position of the Commission that receivers do not cause interference, nor do they threaten effective operation of the public safety network, as would substandard transmitters. Because of the demand for limited spectrum, it is the intent of this Plan to provide efficient spectrum utilization within current technological capabilities. Agencies are encouraged to carefully consider the receiver selectivity specifications of any equipment to be purchased for use in the 763 – 775 & 793 – 805 band.

6.9 Absolute Mileage Separation

In any case where the service areas of adjacent or co-channel systems are separated by at least 50 miles, the interference studies as set forth in this Plan are unnecessary because of free space and terrain losses.

6.10 Trunking Requirement

As referenced in the national element, trunking is mandated for any new system with more than four channels in the 800 Mhz band when located at a single transmitting site. Requests for exceptions will be considered by the Regional Review Committee for mobile data use, encryption, and telemetry stations. Other requests for waiver of the trunking requirement will be considered after presentation of evidence by the requesting agency. Approval to waive the trunking requirement will be based on the individual merits of the presentation;

7.0 SYSTEM LOADING REQUIREMENT

7.1 Single Frequency Systems

An agency requesting a single frequency to replace a frequency currently in use that will be turned back for reassignment will not be required to meet loading requirements in order to obtain the new frequency. However, if the single frequency is not loaded to more than 50 units within three years after the license is granted, the frequency will be available for assignment to other agencies on a shared basis in the event that other frequencies meeting the criteria for assignment are exhausted. Shared use of a frequency is not interference free.

Users of single frequency systems may be required to provide the Regional Review Committee "confirmation of loading" for mobiles and portables as a method of validating system loading. This exception shall apply to agencies which have only one system and a single frequency. Agencies requesting additional frequencies or having multiple systems shall comply with the loading standards as outlined below or provide a "Traffic Loading Study" that meets the criteria as outlined below.

7.2 Loading Tables

Number of Channels	Emergency Channels Units/Channel	Non-Emergency Channels Units/Channel
1 – 5	70	80
6 – 10	75	90
11-15	80	105
16-20	85	120

Agencies requesting additional frequencies must show loading of 100 percent or greater on their existing system. Should a demand for frequencies exist after assignable frequencies become exhausted, any system having frequencies assigned under this Plan four or more years previously and not loaded to at least 70 percent will lose operating authority on a sufficient number of frequencies to bring the system into compliance with the 70 percent loading standard. Frequencies lost in this manner will be reallocated to other agencies to help satisfy the demand for additional frequencies.

7.3 Traffic Loading Study

Justification for adding frequencies, or retaining existing frequencies, can be provided by a traffic loading study in lieu of loading by number of transmitters per channel. It will be the responsibility of the requesting agency to provide a verifiable study showing sufficient airtime usage to merit additional frequencies. A showing of airtime usage, excluding telephone interconnect air time, during the peak busy hour greater than 7-percent per channel on three

consecutive days will be required to satisfy loading criteria.

7.4 Slow Growth

All systems in the 763 – 775 & 793 – 805 MHz bands under this plan will be slow growth in accordance with Section 90.629 of the Commission's rules.

8.0 SYSTEM ENGINEERING REQUIREMENTS

8.1 System Engineering Exhibit

All requests to the Regional APCO Frequency Advisor for additional frequencies must include sufficient data to be able to determine proposed system operating parameters.

The system engineering exhibit must show:

1. Transmit Output Power
2. Type of Cavities (duplexers and combiners) and Associated Losses
3. Type of Transmission Line and Associated Loss (including jumpers)
4. Antenna Model and Gain
5. Ground Elevation Above Mean Sea Level
6. Antenna Centerline AGL
7. Height Above Average Terrain of Antenna Centerline
8. Effective Radiated Power as Determined by Items 1 through 4

8.2 Average Elevation Exhibit

An additional exhibit showing the average elevation of the terrain of each of the eight main radials will be required. If an outside source is used for the calculation of average terrain, a copy of this report can be substituted for the average elevation exhibit.

9.0 CELLULAR TELEPHONE USE

The use of a car radio telephone via interconnect through an 800 MHz trunked radio system or other two-way radio communications system will normally require a significant amount of air time. Therefore, the use of a defeatable interconnect for radio telephone use could be allowed for systems implemented under this Regional Plan. The use of cellular telephones for automatic interconnect to the Public Switched Telephone Network is recommended. Utilization of cellular telephone networks will not impact radio systems implemented under this Plan.

10.0 GIVE-BACK FREQUENCIES

All agencies participating in the use of the new 800 MHz spectrum shall prepare and submit a plan for the abandonment of their currently licensed frequencies in the lower bands. These released frequencies shall be returned to the radio service from which it was assigned. These frequencies shall then be available for reassignment/coordination criteria in effect for that particular service by the regular FCC authorized coordinator for that service.

Frequencies which are to be abandoned by an agency shall not be handed down to another agency within the respective jurisdiction. Though this may seem a convenient method to re-use existing radio equipment, the reassignment must be handled through the normal process. It is recommended that any jurisdiction wishing "to hand down" frequencies to another agency submit the proper coordination and application forms with the document of release. This will put the applicant in a better posture for reassignment of the frequency in question. It should be noted that even this procedure is followed, there is no guarantee that a particular frequency will be assigned to the returning jurisdiction.

The time frame allowed for phasing into 800 MHz and out of the lower currently licensed bands will be considered on a case by case basis by the review committee. Generally, one year will be considered acceptable in most cases, with two years as a maximum. Any agency requiring more than two years shall provide documents stating the reasons for the delay, and give the estimated time of completion.

11.0 ADJACENT REGIONS COORDINATION

Coordination with adjacent regions shall be an on-going process until all regions plans have been finalized. At present, the adjacent regions with which coordination has been conducted are:

- Oklahoma (region 34)
- Texas (region 40)
- Louisiana (region 18)
- Mississippi (region 23)
- Kansas (region 16)
- Tennessee (region 39)
- Missouri (region 24)

See Appendix 19.

As the use of five international common channels is not considered a day-to-day function, the "hard" coordination for the use of these is not considered to be necessary or advisable. The use of these channels will always be on a non-interference basis, with on-the-air coordination at the time of use when required. Any user found to be operating in any manner other than this shall be considered to be operating improperly and subject to the existing FCC rules for willful interference with the Communications of other users.

12.0 INITIAL FREQUENCY ASSIGNMENT METHODOLOGY

Frequencies have been initially assigned on a county-by-county basis using APCO/CET program. The number of frequencies allocated to each county has been correlated to population with a minimum of 5 channels per county and an additional channel for each 25,000 population above 50,000.

Geographic coordinates of the center point of each of the seventy-five (75) counties were determined along with a radius, in miles, of a circle encompassing the majority of the area of the county, but extending less than three miles past the county boundary.

A computer model based on the Okumura Propagation Model combined the above information with a desired received signal strength of 4 dBu to generate a distribution of the most desirable frequencies by county.

After initial frequency requests are met, the frequency coordinator will assign frequencies, giving priority to the initial assignment but having the latitude to choose frequencies other than those specified by this initial distribution.

13.0 USE OF LONG-RANGE COMMUNICATIONS

In a major emergency, where public safety entities might need long-range communications in and out of a disaster area, alternate radio communications plan are to be addressed by primary agencies within Region 4.

These agencies shall include the appropriate interface to the five national channels as a minimum. Such long distance radio communications might be amateur radio operations, satellite communications and/or long-range emergency preparedness communications systems.

Any or all of these systems should be incorporated in the communications plans of those primary agencies. These agencies could then communicate outside the disaster area for themselves and the smaller agencies which might need assistance.

Incidents addressed in the National Public Safety Planning Advisory committee's Plan such as earthquakes, hurricanes, floods, widespread forest fires or nuclear reactor problems could be a cause for such long-range communications needs.

APPENDICES

1 Region 4 - Square Miles and Population By County

Revision note:

The populations listed here are census data valid in 2002. The data included with the original 800 MHz plan has been replaced.

ARKANSAS GAZETTE Wednesday, February 10, 1988

Public Notice

Having been duly certified to the Federal Communications Commission (FCC) by the Associated Public-Safety Communications Officers, Inc. (APCO) as the Convener of an initial meeting of representatives of parties eligible for radio licensing in the FCC's Public Safety and Special Emergency Radio Services to establish a Regional Planning Committee in the State of Arkansas, I hereby give Public Notice that such an initial meeting will be held on April 14, 1988 at room 102, Robinson Center, Little Rock, Arkansas, beginning at 1:00 P.M. This Region is one of 48 established by the FCC, throughout the United States.

The responsibility of the Regional Planning Committee will be to develop a Plan for use of frequencies in the 821 - 824 and 866 - 869 megahertz bands allocated by the FCC for use by such licensees. Parties interested in participating in the regional planning process should contact me or plan to attend the initial meeting.

This public Notice is in accordance with the FCC's Report and Order in Gen. Docket No. 87-112, adopted by the FCC on November 24, 1987.

The Report and Order was based in large part on the Final Report of the National Public Safety Planning Advisory Committee, which was submitted to the FCC on September 9, 1987.

Copies of both the Report and Order and the Final Report are available from the FCC's duplication contractor, International Transcription Services, Inc., Suite 140, 2100 M Street, N.W., Washington D.C. 20037. Phone (202) 857-3800.

Ronnie Rand, Convener
Regional, National Plan

Dated: February 1, 1988

732013

2-10-1T

January 12, 1988

Dear xxx,

The Federal Communications Commission has required the preparation and has accepted a "National Communications Plan." A part of the requirement by the FCC is the preparation of "Regional Communications Plans" for 48 designated regions in the United States. Arkansas is considered a region.

The Associated Public-Safety Communications Officers, Inc. (APCO) has been designated by the FCC to oversee preparation of the regional plans for the FCC. I have been instructed by APCO to convene a meeting of public officials and state and local communications users. From this meeting we will select a committee to prepare the regional plan for submission.

This plan will dictate how we utilize the available frequency spectrum for many years to come. These decisions will have direct impact on the availability and allowed utilization for state, local and law enforcement radio channels.

It is most definitely in the best interest of your governmental entity to attend the meeting or send a designated representative familiar with radio communications. You have the choice of participating in the decision-making process, or living with the decisions that will be made for you. Your participation is solicited. If you are not a member of APCO, you are encouraged to join or have at least one and preferably several members of your governmental entity who are involved in planning, operation or maintenance of communications systems join the organization, so you may have a continuing flow of information regarding this most valuable resource.

Besides being the major organization behind the 9-1-1 national emergency number (and a vital source of information), you can obtain a state and local government or law enforcement radio channel through no other source than the APCO frequency coordinator. The Arkansas Chapter of

APCO is hosting the National Conference August 8-11, 1988, which is the largest communications show in the world, as well as workshops in communications systems, dispatcher training, and technician certification.

We will meet April 14, 1988, from 10:00 A.M. to 12:00 Noon for a chapter meeting, and from 1:00 P.M. to 4:00 P.M. for convening of the meeting on the Regional Plan in Room 102, Robinson Center, Little Rock. We look forward to your participation.

Sincerely,

Signature captured from original PDF document.

Ronnie Rand, President
Arkansas Chapter
Convener, Regional Plan

9 Meeting Minutes

MINUTES OF THE CONVENING MEETING FOR REGION 4 PUBLIC SAFETY PLANNING COMMITTEE

The convening meeting for Region 4 Public Safety Planning Committee was held on April 14, 1988, at the Robinson Convention Center, Room 101, Little Rock, Arkansas. The meeting was called to order at 10 A.M. by Convener Ronnie Rand.

All persons were asked to introduce themselves and note their agency or governmental affiliation. A roster was passed for signature and information. Attendance roster is attached.

As the first order of business, Convener Rand explained the National Public Safety Plan, responsibilities of the Region 4 Public Safety Planning Committee, and briefed the audience on the requirements for release of the additional 6 MHz of spectrum in the 800 MHz range as allocated by the Federal Communications Commission (FCC).

Convener Rand announced that elections would be held and the floor was opened for nominations. Charles Pruitt, Arkansas Crime Information Center, nominated Ronnie Rand for Chairman and a second was heard. Mel Scott, Arkansas State Health Department, made a motion that the nomination cease. There was a second, and Ronnie Rand was elected Chairman by acclamation.

Chairman Rand stated that he would like to have a Vice-Chairman and Secretary elected. Ron Gatewood, Little Rock Office of Emergency services, nominated Robert Marshall, Director of Communications for Arkansas State Police as Vice-Chairman. The motion was seconded.

Mel Scott, Arkansas State Health Department, made a motion that the nomination cease. A second was heard and Robert Marshall was elected Vice-Chairman by acclamation.

Lee Black, North Little Rock Office of Emergency Services, nominated Joe Sexson of Metropolitan Emergency Medical Service (MEMS) as Secretary. The nomination was seconded. Robert Marshall moved that the nomination cease, a second was heard, and Joe Sexson was elected Secretary by acclamation.

Chairman Rand informed the assembly that the committee's actions would be conducted in accordance to Robert's Rules of Order.

Region 4 was divided into four subregions as follows:

- Subregion A - Northwest Urban Corridor
- Subregion B - Mississippi Abatement and Gulf Coastal Plain
- Subregion C - Central Urban
- Subregion D - Arkansas Valley and Ozark/Ouachita Mountains

The assembly was broken down by the counties that constituted their subregion and were requested to select from their subregion a subregion chairman.

It was announced that a draft document would be mailed to members and there would be at least one meeting held for each subregion.

Chairman Rand or Vice-Chairman Marshall would attend those meetings. After input from all subregions, a subsequent draft would be prepared and discussed during a meeting of the whole in approximately April 1989. If all issues were resolved, the plan would be approved by the Region 4 Public Safety Planning Committee and submitted to the FCC for review and action.

Chairman Rand stated that membership of the Region 4 Public Safety Planning Committee would remain open for some time.

There being no further business, the meeting was adjourned at 11:45 A.M.

13 Evaluation Criteria

The criteria incorporates a filing concept which provides for the evaluation of all applications for available spectrum. The evaluation is a sequence of events that will be followed in the assignment of the 763 – 775 & 793 – 805 MHz spectrum within Region 4.

In order to provide for maximum frequency reuse, the allocation has been placed in county frequency pools as a starting point. An initial closing date of November 1, 1988, has been established for all survey-identified applicants to submit applications in accordance with this Regional Plan.

In order to make frequency assignments objectively, the Regional Review Committee will evaluate these initial applications in accordance with the criteria established by this section of the plan, awarding a score for each application. That score will be the total of the points awarded in the five categories outlined below.

Frequency assignments will be made for these applications using the appropriate county frequency pool.

If valid applications exceed the available spectrum, frequencies will be awarded- to those applicants with the highest descending score order. Applications received after the November 1 initial closing date will be evaluated by the Regional Review Committee in similar fashion each month.

Frequency assignments will be made first by utilizing individual county frequency pools as the spectrum resource. As these pools are depleted, frequencies will be assigned utilizing protection criteria as defined in this Plan, until all frequencies offering minimum protection are depleted.

EVALUATION SCORING CATEGORIES

1. Service (maximum score, 35 points).

Each of the eligible services has a predetermined point value (see value rating, page). An applicant for a system for multiple services will be scored on the basis of the sum of the maximum points for each service reduced by the percentage that each service represents of the total system. For example, a system application for use by 50 percent police, 25 percent local government (utility operations), and 25 percent highway (street maintenance) would be scored as follows:

Police - 35 points maximum value times 50 percent system use equals score of 17.5 points.

Local Government (utility operations) - 30 points maximum value. times 25 percent system use equals a score of 7.5 points.

Highway (street maintenance) - 30 points maximum value times 25 percent

system use equals a score of 7.5 points.

Total points awarded for this system is the sum of 17.5, 7.5, 7.5, for a total of 32.5 points.

2. Intersystem Communications (maximum score, 10 points).

The application is scored on the degree of interoperability that is demonstrated, with a range of points from 0 to 10. No points are awarded for use of the mandated designated interoperability channels. These points are awarded for applicant's ability to communicate with different levels of government and other services during times of emergency.

3. Cooperative Systems (maximum score, 25 points).

Those applicants that have demonstrated that they are part of a cooperative, multi-organization system will be scored on a range of 0 to 25 points depending upon the extent of the cooperation.

4. System Implementation Factors (maximum score, 10 points).

This category scores the applicant from 0 to 10 points on the degree of budgetary commitment. If funding has been provided by a line item budget or equivalent in a sufficient amount for immediate implementation, a score of 10 points will be awarded.

5. Give-back Frequencies (maximum score, 20 points).

This category is divided into two factors, each with a point value of 0 to 10 points.

- a. The greater the number of give-back frequencies, the greater the number of points that will be awarded up to a maximum of 10.
- b. The greater the need for the give-back frequencies by other agencies, the greater the number of points that will be awarded up to a maximum of 10. For example, a statewide police frequency, as a give-back, would not be awarded as many points as would a needed VHF frequency usable by a local police or fire department.

Points are totaled for each application and the applications are prioritized by the Regional Review Committee according to the total score. As frequencies are assigned, the appropriate county frequency pool is updated to reflect the frequencies assigned.

Systems implementation is monitored by the Regional Review Committee which determines the progress being made. If progress is found lacking, the licensee is informed of the consequences of the lack of progress. If continued monitoring indicates that sufficient progress is not taking place, the licensee is notified of pending action of the Regional Review Committee to recommend to the FCC that the license be withdrawn. Should the license be withdrawn, these frequencies will be returned to the

county frequency pool.

APPEAL PROCESS

Throughout the frequency allocation process, applicants are given opportunities to appeal decisions which have caused rejection of their application.

The appeal process has two levels; the Regional Review Committee and the Federal Communications Commission (FCC).

An applicant who decides to appeal a rejection should file the appeal with the Regional Review Committee within 30 days from notification of rejection. If the applicant is not satisfied with the Regional Review Committee's final decision based on the appeal, the applicant may file an appeal with the FCC by letter to the Secretary. The FCC's decision will be final and binding upon all parties.

14 Procedure for Determining Service Area Contour

1. Convert effective radiated power from watts to dBk using the formula:
$$P(\text{dBk}) = (10 \times \log P(\text{Watts})) - 30 \quad (\text{B-1})$$
2. SUBTRACT this NEGATIVE number (in other words, convert it to positive and add) from 41 dBu.
3. In the look-up tables, determine the two height columns that correspond most closely with your H.A.A.T.

(For example, if your H.A.A.T. is 300 feet, use the 200 and 500 columns.)
4. Interpolate between listings under the two columns to determine where the figure arrived at in Step 2 falls.
5. Read the mileage at the extreme left-hand column of the row.

EXAMPLE

To determine the service area of a UHF base station with an ERP of 125 watts and an antenna height above average terrain of 400 feet:

$$P(\text{dBk}) = 10 \times \log (125) - 30$$

$$P(\text{dBk}) = 21 - 30$$

$$P(\text{dBk}) = -9$$

Subtracting:

$$F(\text{dBu}) = 41 - (-9)$$

$$F(\text{dBu}) = 50$$

From the look-up table, 50 falls between 45.6 and 52.9 as 400 is interpolated between 200 and 500. Corresponding mileage is 12.

15 Co-Channel Interference Procedure

1. Determine distance from the proposed station to the existing station.
2. If not previously known, determine service area boundary of existing station.
(Method is detailed in Appendix 14)
3. Find distance from proposed station to closest point of service area boundary of the existing station.
(Subtract #2 from #1)
4. Based on mileage from 3 (above), ERP and HAAT of the proposed station, consult look-up tables from dBu level at the service area boundary of the existing station.
5. Subtract this dBu level from 41.
If the result is greater than 25, the proposed system will conform with the interference parameters. If the result is less than 25, the proposed system must be redesigned by lowering power, antenna height, or both until the 25 dB protection ratio is met.

NOTE: If the terrain between the two systems would provide additional protection that would not be evident from using the normalized HAAT's, it will be permissible to calculate the HAAT of both existing and proposed systems along the radial line directly connecting the two stations. The resulting service area boundary of the existing station and the dBu level of the proposed station at that point would then be used to calculate the protection ratio.

EXAMPLE

	Station A (proposed)	Station X (existing)
ERP:	100W (-10dBk)	200w (-7dBk)
HAAT:	500 feet, AMSL	200 feet, AMSL

Distance from A to X:	46 miles	
service Area Boundary:	13 miles	11 miles

46 miles - 11 miles = 35 miles, distance from proposed to service area boundary of existing station.

From look-up tables, dBu level at 35 miles from a station with an

ERP of 100 watts and HAAT of 500 feet is :

$$25.5 - 10 = 15.5 \text{ dBu}$$

Subtracting this amount from the defined 41 dBu level at the service area boundary of the existing station gives 25.5 dB of protection, 0.5 dB more than the minimum we require.

16 Region 4 – Initial Frequency Assignments by Channel

Post-Reconfiguration equivalent frequencies have been added to this chart

CHANNEL NUMBER	Pre-Reconfiguration BASE FREQUENCY	Post-Reconfiguration BASE FREQUENCY	COUNTY FREQUENCY POOLS

ARKANSAS PUBLIC SAFETY COMMUNICATIONS
REGIONAL PLANNING COMMITTEE..FCC REGION 4
720 West Markham Street
Little Rock, Arkansas 72201
(501) 371-4540

«DATA FREQ.DOC»
July 3, 1990

Dear «SALUTE»:

Enclosed are the frequency assignments for Region 4 (Arkansas). Please advise of any conflicts you may have with frequency assignments in your region.

Please notify me in writing within 30 days of your concurrence or nonconcurrence.

If we do not hear from you by August 5, 1990, we shall assume concurrence by your region.

Very truly yours,

Ronnie Rand
Region 4 Chairman

Recipient list:

Mr. William Vincent
Region 18 Chairman
P.O. Box 31014
Lafayette, LA 70593

Mr. Charles Bowles
Region 40 Chairman
3310 Matador Lane
Garland, TX 75042

Mr. Vic Myles
Region 24 Chairman
Kansas City Fire Dept.
414 East 2nd street
Kansas City, Missouri 64108

Mr. David Wolfe
Region 39 Chairman
TEMA
3041 Sideo Drive
Nashville TN 37204

Mr. Gary Adams
Region 34 Chairman
Captain of Turnpikes
P.O. Box 11415
Oklahoma City, OK 73136

Mr. Mike Lucy
Region 23 Chairman
Hattiesburg-Forest-Lamar
P.O. Box 1645
Hattiesburg, MS 39403
