

Before the FCC decided to pursue Net Neutrality protections, Fox News Channel's Glenn Beck warned his audience that the government was "trying to take over the media." Beck later said that Net Neutrality would "wildly affect your life and free speech" by forcing a "Marxist utopia" on the Internet. I read the cyber security act and as a electronics engineer and a software programmer I don't agree with an international or foreign institution censoring our internet. I trust the free market to decide on any or no censorship of the free internet. Parents and home PC users with the right education can censor their own computers from home.

Tell Jay Rockefeller if he doesn't like the free internet in America then move to China. NIST is not the answer just another tax... broken government full of oligarchs think they know whats best for me or any american is plain foolish and tyrannical.

Too many monopolies, secret societies, lies, cover ups... just keep pushing it???
