Dear Chairman Genachowski:

First, congratulations on your confirmation as Chairman of the Federal Communications Commission. Few of your predecessors have led the Commission at a more dynamic and challenging time in our history. The Commission has before it a wide range of issues, from the development of a national broadband plan to spectrum policy to reforming the FCC itself. One of the more prominent issues is network neutrality.

As you know, I have been a champion of network neutrality and am writing to express my support for the Commission's efforts to begin the process of examining this issue through a notice of proposed rulemaking. Handled correctly, the rulemaking process should ensure that all Americans are able to access lawful content of their choice as well as use any application, service, or device as long as it doesn't harm the network. It will also provide peace of mind to users and developers by prohibiting unreasonable and anticompetitive discrimination that would adversely affect Internet users' experience or choice. These fundamental pillars, openness and freedom, have been the bedrock of the Internet's amazing growth, global acceptance, and the infinite benefits that have been reaped by Internet users and should be preserved.

At the same time, there is a significant interdependency between broadband and Internet content and applications that must allow for the appropriate level of flexibility for network operators to effectively manage their networks in order to ensure quality of service to all customers. This is essential since networks are becoming more complex due to the convergence of voice, video, and data traffic—from emails to live streaming high-definition video. In addition, content is growing larger and more dynamic—there has been an explosion of user-generated content, which was not anticipated when these commercial broadband networks were designed more than a decade ago—*approximately 60 percent of the content on the Internet is user-generated and at least five of the top ten most popular websites are forums for user-generated content.*

We must also ensure that overly prescriptive network neutrality regulations do not infringe on our effort to provide affordable, high-speed broadband to every American. It is estimated that about 9 million American households lack access to broadband, and millions more

lack adequate broadband speeds necessary to leverage the full benefit the Internet has to offer. These households, typically in inner city and rural areas, have the most to gain from broadband through greater access to job opportunities, education and training, e-commerce, and e-government.

Notably, the US ranks globally 15th in broadband adoption, 14th in broadband pricing, and 28th in broadband speeds—not very impressive for the country that invented the Internet. These issues will certainly be addressed in the Commission’s national broadband plan, but excessive network neutrality regulation could bring uncertainty.

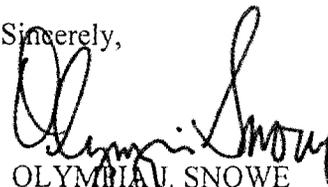

An ancillary issue that should be further examined by the FCC in the future is when Internet services emulate traditional telecommunications services. Differences in regulation could present an unfair competitive advantage and infringe on the Commission’s long-held technology-neutral approach. More importantly, it could disadvantage some consumers over others by reducing access to popular and valuable services. One of the amazing benefits of the Internet is that it erodes geographic barriers so innovation should permeate ubiquitously regardless of an Internet user’s location.

The Internet’s vast impact on this nation is profoundly indelible and undeniable. There are approximately 230 million Internet users and more than 70 million of them are broadband subscribers. Yet, we haven’t even scratched the surface on how immense the impact will eventually be. A well-reasoned network neutrality policy is an essential component in protecting the fundamental tenets of openness and freedom in order to achieve that boundless benefit.

One of the constant themes I heard throughout the Commission’s Broadband Workshops was government must not prohibit appropriate experimentation. It is imperative that we encourage innovation to occur at *all* segments of the Internet supply chain for that is the vital catalyst to the Internet’s continued health and growth.

I look forward to being kept apprised of the FCC’s activity on this matter and am sure the Commission will perform the essential due diligence in collecting the necessary information to develop sound policy. I am also willing to work with the FCC and my colleagues here in Congress to ensure that the Commission has the resources and authority to properly and effectively address this issue.

Sincerely,

OLYMPIA J. SNOWE
United States Senator

Commissioner Meredith Attwell Baker

OFFICE OF
THE CHAIRMAN

FEDERAL COMMUNICATIONS COMMISSION
WASHINGTON

March 3, 2010

The Honorable Olympia J. Snowe
United States Senate
154 Russell Senate Office Building
Washington, D.C. 20510

Dear Senator Snowe:

I write to update you on the progress of our ongoing rulemaking to preserve the open Internet. Thank you for your letter expressing your thoughts about the Commission's launch of a participatory public process to develop commonsense rules of the road to preserve an open Internet. We share a common purpose in ensuring that the Internet remains an enduring engine for innovation, investment, economic growth, and the free flow of information. To this important end, you have my pledge to continue working with you and your staff in an ongoing, constructive dialogue with respect to this crucial infrastructure.

The Commission released its *Notice of Proposed Rulemaking (NPRM)* on preserving the open Internet on October 22, 2009. The *NPRM* launched a multi-month process, with the goals of safeguarding the free and open Internet, providing greater predictability for the marketplace, and fostering continued innovation and investment. The task of securing an open Internet deserves an open process. Accordingly, Commission staff are conducting a fact-based, transparent, and participatory process to develop rules based on a record that includes engineering and economic examinations.

The Commission has convened a group of technical advisory experts for ongoing input, and held a workshop in December on broadband network management. Over the last three months, the Commission also has held staff-level workshops on investment and innovation, on consumers and transparency, and on free speech and civic participation. Our process now is well underway, and we are encouraged by signs of growing common ground among the many stakeholders we have heard from.

I look forward to continuing a constructive dialogue with you on these issues. Please do not hesitate to contact me if I can be of further assistance.

Sincerely,

A handwritten signature in black ink, appearing to read "Julius Genachowski". The signature is stylized with a large, sweeping initial "J" and a long horizontal stroke extending to the right.
