

Please do not kill my Sirius Listening, regular radio in full of static, and interruptions. When a storm comes in reg radio is lost to static. In a emergency like 911, I was able to tell fellow NYC workers what was going on at the time, stopping panic and miss info. Sat Radio needs to be protected from any interruption from bleed through, this is a matter of life & death in another 911 attempt. Thank you in advance Save the USA. Stan Pavlak
