

The attempt by our government and certain factions associated with the government to stifle free speech is appalling. They are attempting to do this through net neutrality. There are arguments in support of this that are childish and untrue. There are many things on the internet with which I don't agree or even like, but the people and companies that put them on the internet have every right to use the internet to promote their ideas and products.

The net neutrality act is an attempt by people who claim to love free speech to stifle any voices of dissent. It is against the very principles on which this country was founded. Net neutrality is also against the first amendment. Freedom of speech is for all voices, not just a few.

Net neutrality is an act of a repressive regime and comes from countries like North Korea and China where dissenting voices are not allowed. This is America. We allow ALL voices to be heard. And all computers, tv's, and radios allow the individual to decide what voices they will listen to in free speech. Get rid of net neutrality and promote freedom.
