

A rate change that consists of larger companies receiving a much lower per minute rate than smaller companies is absolutely ridiculous! You are punishing larger companies for their volume of business! This is the United States of America where capitalism reigns!

Your proposed decision is just another way that our current administration is proposing that we "spread the wealth" in order to give "equality" (interpreted as favoritism and preference) to some rather than all.

Unless I am misunderstanding this new proposal, I am against it 100%. I am asking that you reconsider your proposal and base your decisions on complete equality for every provider and company involved, regardless of volume, rather than having a decision based on current size of private business.
