

I do not want Charter, Comcast or their ilk controlling what I can access on the internet. They already have monopolies in their respective areas, and we citizens are forced to use their services if we want access to the internet at whatever charge they impose. They already have too much control of access. These monopolies are granted by the citizens through the government. I do not want the government to turn over control of internet content or access to these monopolies.

If control of content or access is turned over to these monopolies, they will simply use it as a means of further gouging the citizens with additional access and content fees. Currently, they have a license to overcharge for their services, please do not give them a license to steal based on access and content.

These providers have been granted a legal racket by the government. Do your job and regulate this industry. Do not give them carte blanche to stifle the internet and to overcharge citizens through the control of

access and content. And do not allow them to prevent me as a citizen from accessing whatever information I wish to see on the internet.
