

Memorandum for Google, Inc.
Mr. Whitt, Esq.

07-15-2010

Thru: FCC – GN Docket No. 09-51, 10-127

From: James Edwin Whedbee, M.Ed.
WQJI780

Re: Reply Comments to Google, Inc.

Permission to use a base station under WQJI780 for 'last mile' backhaul

To the Commission:

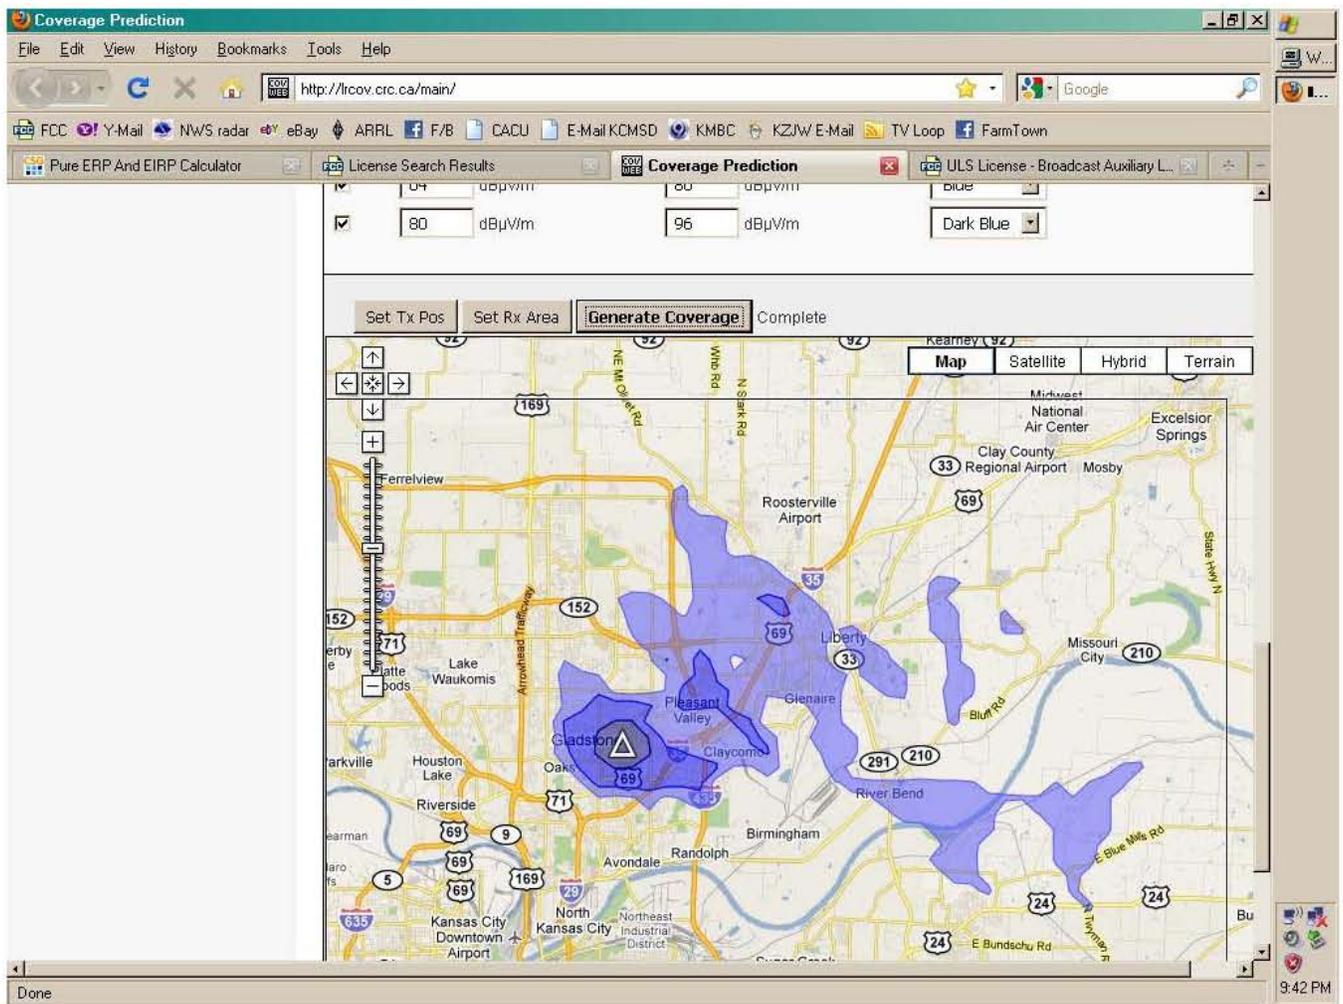

This responds to Google, Inc. and its submission of comments in the above-referenced proceedings disclosing an ex parte contact with one of the FCC's Commissioners. Mr. Whitt may relate to Google, Inc., that this licensee (WQJI780) is perfectly willing to give Google, Inc. permission to employ a base station at the "Gladstone Test Area" with no strings attached as long as Google, Inc. is willing to employ its own equipment and obtain the necessary permissions from the city to install it. I make this offer because unbeknownst to Google, Inc., and apparently the Commission, many of these 'broadband' frequencies are being used as alternative links where duplicate data is sent through another node to ensure continuity of networking (though it isn't a particularly efficient use of the spectrum). Likewise, much of this 'demand' for spectrum is just not so too. In any event, as a show of good faith, if Google wants an inroad into the Kansas City, MO market, my station (WQJI780) has #1 priority in seniority over all other licensees in this community and I'd welcome Google's use of this station should it so desire and brings its own equipment.

Best wishes,

James E. Whedbee, M.Ed.
