

I rely on the Internet as a public platform for private, confidential, free speech, and for equal opportunity, economic growth and new innovation. Without vital Net Neutrality protections, companies like Verizon, Google, and Comcast, which have a special interests, commercial incentive(s) designed to limit this type of free-flowing Web intercourse, and they can decide whether I will have a private voice online. These companies should not have the power to determine your fate or my fate on this common carrier - Internet. We paid for it, not them!

The FCC must have the power to protect my rights and all individual consumer access to this most important communications medium as well as InterNet II - in these times.

We demand that the FCC and all Publsi Service Commissions stand firm with me and keep the Internet in the hands of all the people for all of the people - who MUST use it every day. Please reclassify broadband as a "telecommunications service" and keep the Internet open and free from all special interests and wouldbe corporate gatekeepers.

Additionally, please block Comcast from their stated merger and acquisition - efforts.

As the acknowledge principal author of technical tariff response that led to the Carterfone Decision against AT&T, Bell Labs and all the Bell Operatrng Companies in favor of the people, I advise this issue is extremely serious, devious in it's disguise(s), and a threat to USA and World Security. It is actually terrorist in it's ability to control and analyze every person who uses the Internet.

This is R.M Electronics International, Inc. and I am Dr Ron Manclaw, CEO and Senior Principal Engineer.
