

To FCC employees,

The internet has, and hopefully will continue, to revolutionize the way we interact, enjoy media, and gather information. The key to its success is that the internet has always been an open playing field where new ideas and new information can be conveyed and accessed by ANYBODY. Everyone competes on the internet, from Google and Yahoo to two guys with blogs writing in their basements. As the FCC you are an employee of the taxpayer, not a power broker for corporations. DO NOT give away your power to regulate the internet and preserve net-neutrality. In fact, the Supreme Court of the United States of America is on my side on this issue, seeing as how they have confirmed on a number of cases that you as the FCC have the power to regulate the internet. Putting corporate short term profits over long term entrepreneurial development is a foolish choice. Google Inc., the worlds most successful internet company, would never have been able to grow as it has if the IP provider!

s were able to hold a "pay-tier" gun to their head and demand they pay more for their content to reach their users. Where will we be able to find information that contradicts the corporate media if corporations can slow down traffic? Where will the next Obama and Paul campaigns begin if their websites are slowed down? How can a small business expect to compete with a big one if the IP provider provides better service to one and not the other? Electricity flows the same rate over wires no matter how much you consume, depending on whether it is AC or DC. Water flows through pipes the same speed does it not? Why should information flow at different rates for different people? Do what is right. Protect net neutrality now or the next Google will arise in another country that does.

Sincerely,

Daniel Adler
