

Hello!

My name is Mike. I'm a software engineer, working at a hedge fund.

Net neutrality is the single most important issue I know. Why? Because no "greater" issue can be addressed without the free speech necessary to do so. Please, then, continue to work on establishing actual net neutrality regulation!

Thank you kindly,  
Michael

Exemptions out of technical necessity? Of course! As an engineer, I know that technical limitations are inevitable. But the \*completely unqualified\* exemption of broadband from net neutrality requirements is by definition the \*complete antithesis\* of net neutrality.

Any so-called "compromise" that allows Internet providers to build toll lanes online - for NON-TECHNICAL reasons - is not a compromise; it is a forfeit, full-stop.

Technical exemptions: a necessary evil. All-encompassing exemptions: a GRATUITOUS evil. And wireless is no different from wired in this regard. Wired is the now. Wireless is the future. So they both matter.

I know the agency can stand with the public and protect consumer access to the most important communications medium of our time. I know the FCC can regain its resolve to protect Net Neutrality on wired and wireless networks.

As government regulators, you are entitled to protect your government's people. I respect that power and I dearly hope you use it!

Please reclassify broadband as a "telecommunications service" and keep the Internet open and free of corporate gatekeepers.
