

The waiver submitted by the Georgia Broadband Alliance lists the City of LaGrange as a potential site. We at the City of LaGrange plan to build our own system in conjunction with a regional plan that consists of seven cities and counties. Even though we only have a regional plan at this time, we are seeking to work with any county or city in the state so that we can establish a state wide plan in the future. This system will be government owned and operated to provide the best solution for public safety operating within our network coverage.
