

My name is Dorine Wright. I possess a MS in rehabilitation Counseling. I am contacting because it is imperative that those of us that are visually impaired have the same access to cell phones as all individuals. We at present have extreme difficulty obtaining employment given our impairment. We as citizens of this great nation deserve the right to access all technologies that others do. It further handicaps us to be limited to devices that are unaffordable, or have an added expense. How can we ever compete in a market where we are left behind. Due to their enormous injustice we are often left without cell phone service as an option. Which when traveling in a world in the dark is essential as air for safety.
