Business Only Broadband (BOB) is the culmination of experience, technology and the recognition of ever growing bandwidth requirements and the need for true diversity from the embedded fiber infrastructure. Our management team, which has over 100 years of combined experience, has been at the forefront of alternative local access from the late 80's to today. BOB's network was designed and engineered specifically to meet the High Speed Internet, Metro Ethernet and Business Continuity network needs for today's business environment.

BOB was formed with the concept of building wireless broadband Ethernet networks that would deliver service from T-1 to gigabit capacity, perform at the level of fiber optic infrastructure and have no common point of failure with the local exchange network.

BOB Network Overview:

- The largest fixed wireless broadband provider in Chicagoland and New York City.
- Highly resilient design with self healing ring architecture.
- Metro Ethernet network powered by Motorola, Cisco and DragonWave technology.
- Layer 2, MPLS and Layer 3 service.
- Redundant Data Centers with connectivity to multiple Tier1 internet transit providers.

Executive Overview

- > [Testimonials](#)

Executive Overview

Business Only Broadband (BOB) is the culmination of experience, technology, the recognition of the ever growing bandwidth requirements of your business and the need for true network diversity. Your company's data and internet network is a key business asset that supports mission critical communications to clients, vendors and employees and the productivity of your business. Our management team, which has over 100 years of combined industry experience, has been at the forefront of alternative local network industry from the late 80's to today. BOB's networks are designed and engineered specifically to meet the Internet, Metro Ethernet and Business Continuity network needs for today's business environment.

BOB's management team were pioneers in the fiber optic network space and were part of the team that deployed the nations first competitive access fiber optic network in the late 1980s as a part of Chicago Fiber Optics which later became Metropolitan Fiber Systems (MFS). Over the next 15 years we played a major role in the deployment of the national and global fiber optic infrastructure. In the early 2000s the BOB management team turned our focus to the wireless broadband space and was the team that deployed the first wireless broadband network in North America. This experience laid the foundation for BOB.

In 2005 BOB was formed with the concept of building wireless broadband Ethernet networks that would deliver service from T-1 to gigabit capacity, perform at the level of fiber optic infrastructure and have no common point of failure with the local exchange network. Over the past four years we have built the premier wireless broadband networks in Chicago and New York to provide your business with the following features and benefits:

Network Feature

Customer Benefit

More bandwidth for less

Your employees will be more productive and the interface to your clients will be faster while you continue to meet your budgetary requirements.

100% Wireless. No common point of failure with landline based fiber or copper networks.

The BOB Co-primary design ensures that your mission critical applications are always available to your customers, vendors and employees.

The largest fixed-wireless broadband networks in the Chicago, New York and New Jersey metro area.

More coverage means more availability and options to connect to your branch offices, vendors, data providers and data centers. Once you're on the BOB network we can connect you to wherever your business needs dictate rapidly allowing you to be more nimble than your competition.

Latest Ethernet, wireless and Cisco technology deployed.

By deploying the latest technology BOB has built the most cost efficient network infrastructure available, these cost benefits are passed on to our customers which ensures your budgetary needs are met.

Scalable bandwidth from T-1 to 1 Gbps. Customers can increase bandwidth to fit their business requirements in days with one call.

The BOB wireless technology can be upgraded remotely within 24 hours notice, this lets you manage your bandwidth on a real time basis to meet your ever changing business needs. In addition it avoids additional costly additional installation charges.

24 hour a day 365 days a year network monitoring and management.

World class service when you need it, your data network never sleeps and BOB will be there whenever you need us.

High Speed Internet

1 Set up high-speed internet.

2 Connect laptop or PC.

3 Start surfing.

Save up to \$130* when you order online today.

Plus, online exclusive - FREE overnight shipping

Just plug in the wireless modem and surf at broadband speeds anywhere in the Clearwire coverage area.

Simple — Plug and play technology

- Easier setup than DSL or cable
- No technicians, no software, no waiting
- No phone lines, cable service, or software are required
- Just plug the modem into a wall outlet, and start surfing
- Check out our [installation video](#)

Portable — Internet that you can take with you

- Go online at home or anywhere in our coverage area
- Clearwire's advanced technology has greater range than Wi-Fi
- Transmits signal through the air — not through wires
- No need for a phone line or cable connection

Fast — Up to 25x faster than dial-up

- Download pictures, music and videos
- Up to 2.0 Mbps download / 256k upload speeds

Reliable — Always on, always secure

- No waiting for connections
- It's our network — we own it, we operate it

Affordable — Only the internet speed is high, not the price

- It's time to move up to Clearwire
- [Sign up today and save](#)

Online Account Management — Manage your account the simple way — online

Just log on. You can update your profile, check billing, and add features and accessories. Plus, you can upgrade your plan, manage your website, set up a network, manage your Clearwire Digital Voice Service and access online chat for help. You'll find managing your Clearwire account online is designed to be super easy.

 **Email** — Keep in touch with Clearwire® email

Clearwire gives you several email accounts that you can personalize and manage online. Check email on the Web from anywhere in the world or use your favorite email program. Your service includes anti-spam protection and Clearwire plans offer from 3 to 8 email addresses depending upon the plan you choose. You can also purchase additional email addresses with any plan.

 **IP Address** — Get support for gaming and remote access

An IP address is a number assigned to your computer that identifies it on the internet. You might need static IP address if you plan to use remote management software like PC Anywhere, Remote Management, or Terminal Server. Some VPN connections also require a static IP address.

 **Hardware Protection Program** — Extended protection for your modem or pc card

Fast, reliable internet service should not be interrupted by equipment issues. The Clearwire Hardware Protection Program (HPP) provides protection and replacement of your HPP-covered Clearwire pc card and/or modem should your Clearwire pc card or modem experience:

- Accidental damage due to handling or power surge
- Defect in material or workmanship, or failure due to normal wear and tear

...a replacement will typically be provided to you within 48 hours.

The Clearwire® ClearPlug™ Ethernet Wall Mount Module makes it possible to set up your Clearwire modem anywhere, wherever the wireless signal is strongest. ClearPlugs use existing electrical wiring to connect the modem and your computer, so you don't have to run unsightly cables through your home or office.

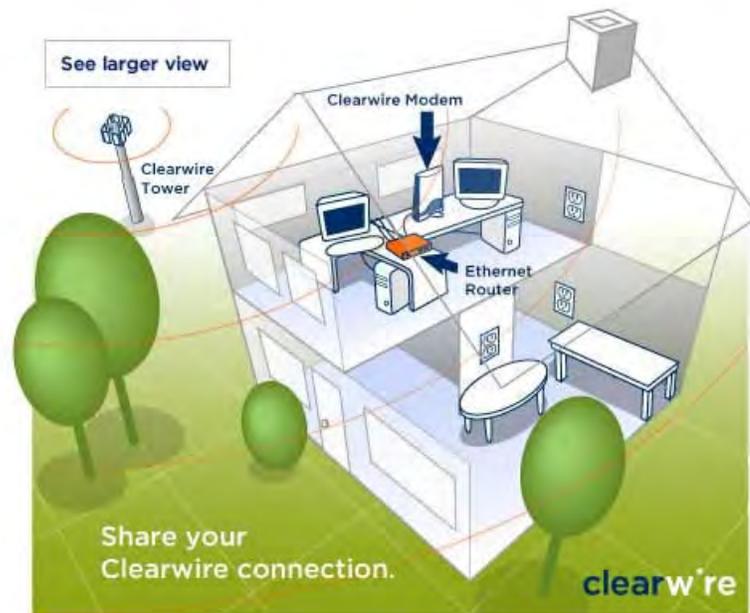

The Clearwire modem is compatible with standard [wireless](#) and [ethernet](#) routers, so you can easily share your Clearwire connection across your local network. Simply connect the modem and your computers to the router, follow the setup instructions from the router manufacturer, and everyone is online.

If you need help setting up your network, contact a Customer Service Representative at 1.888.CLEARWIRE (1.888.253.2794).

CLEAR DEVICES

Portable Wi-Fi hotspot, USB Modems, Laptops & Netbooks and [More](#)

[View Devices](#)

CLEAR is the first network to provide a true seamless internet experience, wherever you go.

CLEAR is fast-as-you-want internet at home.

CLEAR is take-it-with-you internet when you're on the go.

CLEAR is a 4G hot spot spanning your coverage area!

What is 4G?

CLEAR is building the fastest network around—and we keep expanding from city to city. With average speeds of 3 to 6 Mbps and bursts of over 10 Mbps, CLEAR's 4G WiMAX network gives you the speed you need to stream movies, play online games, video chat on the go and take full advantage of the power of the Internet from wherever you are.

What makes 4G different?

All you have to do is experience the speed of 4G for yourself and you'll know. Today's 3G networks were built for making phone calls. But CLEAR's 4G WiMAX network was built just for the internet, wherever you are. That means you have the bandwidth you need to download movies, upload videos, stream games and more—all at ridiculously fast speeds.

What can I do with 4G?

What can't you do? 4G gives you the bandwidth to do all those things that the slow drip of 3G made so painful. Watch live soccer from Europe from the sideline of your son's soccer game in Seattle. Email that ginormous presentation from the road in seconds without having to find a coffee shop to make a connection. Download the video from that conference you couldn't attend in the middle of a trainload of commuters. 4G speed let's you embrace the power of the internet.

What does all this speed cost?

CLEAR is more than our name, it's our approach to pricing as well. We offer combined mobile and home plans, home-only plans, voice plans and mobile plans starting at \$25 a month. There are no tricks and no surprises. You get a wireless connection with 4x the speed of 3G for about the same price as a basic, wired, ball-and-chain connection from your phone or cable company. Our simple CLEAR Advisor can show you which CLEAR service plan is right for you in less than a

"I hook up my laptop, I plug it in, ...and I don't worry about it."

minute.

Where can I use CLEAR?

With CLEAR, you have the connection you need and the freedom to move. Use it at home. Fire it up on the road. No more battling for bandwidth on insecure Wi-Fi hotspots. No more searching for coffee shops, just to find an Internet connection. No more paying for Web access at hotels. CLEAR goes wherever you need it in your city. And our 4G network is arriving in more cities all the time. See our 4G [Coverage Area Map](#)

FAQs

What is 4G WiMAX?

Clear has built a brand new WiMAX network that covers entire cities with super fast mobile internet. With average speeds of 3 to 6 Mbps and bursts over 10 Mbps, WiMAX allows you to stream movies, play online games and video chat on the go.

How do I find out if I have 4G coverage?

You should be able to get Home Internet service anywhere in the Home & On-The-Go coverage area. To be sure, just enter your street address and zip code in the search box.

How accurate is the coverage map?

Our coverage maps can't guarantee WiMAX internet coverage, but rather approximate your anticipated coverage. Certain areas on the map may have limited or no coverage, and various factors (e.g. terrain, foliage, buildings) may affect your actual coverage at a particular location.

What is the difference between Best CLEAR Coverage and CLEAR Coverage?

If your address falls in our Best CLEAR Coverage, CLEAR service should work well in your home and office, and on-the-go virtually anywhere in the CLEAR coverage area. With Best CLEAR coverage, you can take advantage of any of our service plan offerings. If your address falls in CLEAR Coverage, you can use CLEAR out and about in your city, but indoor performance may be highly variable. With CLEAR coverage, you are only eligible for our on-the-go plans.

Coverage Apps

Find if CLEAR is where you are — on-the-go — with Got CLEAR?

[Why can I only get On-The-Go plans with CLEAR Coverage?](#)

If your address falls in CLEAR Coverage on our map, CLEAR service will work best out & about in your city. Service indoors at this address may be highly variable.

▼ [Can I get nationwide coverage?](#)

If you live in the CLEAR coverage area and you want to expand the places you can get coverage, CLEAR offers a 3G/4G service plan and USB modem that gives you CLEAR 4G coverage in the CLEAR coverage areas, and switches to 3G coverage when CLEAR 4G isn't available. [View 3G coverage area map](#)

▼ [What is the difference between 3G and 4G?](#)

4G is 4x faster than 3G so that means blazing fast speeds, on-the-go, anywhere in CLEAR coverage. CLEAR is in select US cities. Adding 3G service to your 4G plan allows you to use the internet, even when you are outside CLEAR coverage. 3G is available as an upgrade on CLEAR on-the-go plans.

Plug into the USB port of your laptop for CLEAR 4G service.

Clear 4G Mobile USB

A high-speed, low profile USB for your laptop.

WiMAX-Ready Laptops

CLEAR 4G WiMAX connection with no external modem.

FAQs

▼ Will it work with a regular laptop?

Regular laptops can connect to CLEAR by using a Clear USB Modem. Just plug the modem into your laptop's standard USB port to connect. When you choose your device, look at the Specifications to ensure it will work with your particular laptop.

▼ How easy is it to set up?

It's a lot like using Wi-Fi on your laptop. If you're using a WiMAX-ready laptop or handheld device, it should connect automatically in CLEAR coverage areas. If you're using a USB modem, just plug it into your laptop and the CLEAR connection manager will automatically look for a CLEAR signal.

▼ Can I use CLEAR service in other cities?

Absolutely. You can use your CLEAR service in any city where there is a CLEAR network. We're rolling out in cities across the nation, so your coverage options are increasing all the time. See our interactive coverage map at www.clear.com/coverage for announcements and coverage areas.

▼ Will it work with other devices?

Yes, with the right Clear devices. Clear USB Modems can be paired with the Clear Spot to create a portable Wi-Fi hotspot for up to eight Wi-Fi devices (including Apple iPhone, BlackBerry® devices, Apple iPod Touch, Nintendo DSi, laptops and more).

FAQs

▼ Can I use CLEAR service in other cities?

Absolutely. You can use your CLEAR service in any city where there is a CLEAR network. We're rolling out in cities across the nation, so your coverage options are increasing all the time. See our interactive coverage map at www.clear.com/coverage for announcements and coverage areas.

▼ How easy is it to set up?

Very easy. Just plug in your Clear Modem, connect it to either a computer or your home router with the Ethernet cable, and follow the simple installation instructions on your screen. No cable guy required.

▼ How secure is the network?

Unlike Wi-Fi, CLEAR uses a licensed 2.5 GHz frequency and OFDM transmission protocol. The combination of licensed frequencies and OFDM technology provides a very secure connection.

▼ How will I get my devices?

All Clear devices are shipped via UPS next day business. You should receive the equipment the day after you place your order as long as the order is received before 3:00 P.M. Eastern time.

Description

CLEAR's Home Modems are easy to install and give your home computer or home office 4G speeds without the need for a complicated installed modem. Just plug-and-play and you're ready to get connected.

Good for

- Home use for personal computer, network, or home office
- Versatility - modems can be portable to other locations within the network
- People who don't want to deal with the hassle of an "installation guy"

Benefits

- Quick installation - no cable guy necessary!
- Easily connect to a home computer or router
- Reliable 4G coverage for your home connectivity needs

Wireless Internet Plans & Pricing

Introducing Xfinity™ Internet 2go

- FREE 4G/3G Mobile Broadband Device
- Fastest available wireless Internet speeds
- Nationwide Coverage
- Just \$55 a month

Fast Wireless Internet Speeds. Low Monthly Cost

Now Comcast Business Class Internet customers can get a great deal on our Nationwide Preferred (4G/3G) wireless broadband service for just \$55 per month and you'll get the best available speeds at the best price.

4G/3G Nationwide Preferred

Internet 2go Nationwide Preferred (4G/3G): For the fastest wireless speeds outside the 4G coverage area! This service is ideal for your business if you to intend to travel between 4G and 3G coverage areas, providing continued service outside the optimal 4G network.

- 4G/3G dual mode services provide the same blazing-fast wireless Internet speeds within the 4G network, and 3G speeds outside the network
- Nationwide wireless coverage with 3G service

Covad Wireless Services

T1-class wireless broadband services for business

Covad Wireless services offer businesses T1-class wireless broadband that delivers fast, symmetrical downstream and upstream speeds. By delivering Internet access through an industry-leading wireless infrastructure, Covad Wireless services provide businesses a powerful alternative to standard T1 services.

- Small-to-medium business connectivity—Covad Wireless services provide small-to-medium companies with business-class broadband in an affordable, flexible range of offerings from 768 Kbps up to 6 Mbps—that's up to four times the speed of a conventional landline T1!
- Enterprise-class bandwidth—For larger enterprise customers, and those with significant bandwidth requirements, Covad Wireless services offer plans from 10 Mbps up to 45 Mbps symmetrical throughput—backed by a carrier-class Service Level Agreement (SLA).
- Get up and running fast—Many Covad Wireless services can be installed and operational in three to seven days.
- Room to grow—Businesses can start off with 768 Kbps and can upgrade to faster levels of performance as needed, all without having to purchase additional equipment or implement local configuration changes.

About Covad Wireless

NextWeb, Inc., (d/b/a Covad Wireless) is the largest fixed wireless Internet service provider (WISP) for business operating in California, Nevada and Illinois. The company utilizes licensed and unlicensed wireless technology to bypass the local telco infrastructure to deliver cost-effective, T1-class broadband service that can be installed in days, rather than weeks.

History

Covad Wireless was founded as NextWeb, Inc. in 1999, and started operations with its first customer in 2000.

On February 21, 2006, NextWeb and Covad Communications Group, Inc. (ticker AMEX: DVW; web: www.covad.com), a leading national provider of integrated voice and data communications, announced they had finalized an acquisition in which Covad Wireless became a wholly-owned subsidiary of Covad.

Markets Served

Covad Wireless provides service to over 3,500 corporate accounts in the largest metropolitan markets in California, including the San Francisco Bay area, the greater Los Angeles area, and Orange County, as well as Las Vegas, Nevada and the Chicago area. The company's service area encompasses over 220 cities across more than 3,000 square miles and covers more than 50,000 small and medium-sized enterprises (SMEs) in population centers that include more than 25 million households.

Covad Wireless T1-class business Internet: Super-T

Internet Access for Small and Medium-sized Businesses

Covad Wireless offers a flexible, scalable and cost effective business-quality broadband service. When your business demands reliable bandwidth, Covad Wireless delivers the goods. And Covad Wireless will have your service ready within 3 to 7 business days.

Service Overview

Covad Wireless's Super-T Business Internet Access is the perfect choice for mission critical business applications and companies of any size. Our Covad Wireless Super-T service provides upload and download speeds between 768 Kbps and 6 Mbps - that's up to four times the speed of a conventional land line T1! The Covad Wireless Super-T service is fully symmetrical, providing the same upload and download speed for maximum productivity.

Covad Wireless Super-T Features

- Symmetrical speeds for business applications
- Dedicated bandwidth & premium SLA
- Installation typically in 3 to 7 business days
- No special equipment required
- Scalable with your needs - from 768 Kbps up to 6 Mbps (the speed of 4 bonded T1's or a fractional DS3)
- Contracts as short as 6 months

Reduces Frustration

Covad Wireless operates its own network. We don't wait for the phone company to run wires or resolve problems. Covad Wireless's Super-T service can be installed on your timeframe in as little as 3 business days without frustration.

Saves Money

Covad Wireless's Super-T service is cost effective and doesn't require special equipment, eliminating expensive hardware costs. As your business grows, you can upgrade your Covad

We install Super-T super-fast!

Covad Wireless usually gets Super-T customers installed within only 3 – 7 business days. Compare that to standard T1 or DSL installation timeframes!

No Frustrating Delays

Covad Wireless operates its own network. We are not dependent on the local phone company to run wires or resolve problems. That's why Covad Wireless Super-T service can be installed on your timeframe in as little as 3 business days without frustration. Because our technicians are local and installation is simple, they can respond quickly to meet your timeframes. You get T1-class Internet access with symmetric speed options up to 6 Mbps.

Simple Installation

Our technician visits your building, installs a small radio on your rooftop and brings a cable into your office with a Fast Ethernet jack. The Fast Ethernet port connects directly to your LAN, or PC. And if you decide later to increase your Super-T service speed, it just takes a phone call. No additional installation required.

Covad Wireless DS3-class Business Internet Access: HiCap

Business Internet Access for Enterprises and High Bandwidth Applications

Covad Wireless offers the most flexible, scalable and cost effective enterprise level Internet access solutions. When your business demands high capacity, mission-critical bandwidth, the Covad Wireless HiCap solution delivers unlike any conventional DS3 or fiber service. Covad Wireless's HiCap can be installed quickly and provides outstanding value.

Service Overview

Covad Wireless's HiCap solutions are the ideal choice for high bandwidth, mission critical Internet access applications. This enterprise-class connection is delivered using carrier-class licensed microwave technology that links a customer's location directly to Covad Wireless's network and the Internet, eliminating the need for telco infrastructure while providing a high bandwidth, low latency, reliable service.

Covad Wireless's HiCap solutions are available in speeds ranging from 10 Mbps up to 45 Mbps. All HiCap solutions deliver a convenient Fast-Ethernet interface to the customer, eliminating the need for expensive DS3 cards and routers.

Covad Wireless HiCap Features

- Tiered bandwidth available at 10 Mbps, 15, 20, 30, or 45 Mbps
- Professionally engineered and installed licensed microwave equipment
- Convenient Fast-Ethernet customer interface
- 99.99% up-time targets with strong Service-Level Agreement support
- Fast installation in, typically, 30 to 45 days or less
- 24 x 7 Monitoring & Support

The Covad Wireless HiCap solution is delivered using Ethernet-based technology for maximum scalability, reliability, and cost-efficiency.

Need DS3, T3, or Fiber Backup?

For Enterprises with existing DS3 or fiber access, Covad Wireless's HiCap solution enhances your business continuity and disaster preparedness objectives by providing a path- and network-diverse route to the Internet.

Why Covad Wireless?

Covad Wireless is the nation's largest fixed wireless ISP for business and is wholly owned by Covad Communications Group, Inc. a leading nationwide provider of integrated voice and data solutions. Thousands of businesses have selected Covad Wireless because of the benefits of our service and the unparalleled support we provide.

HiCAP

ENTERPRISE INTERNET ACCESS

High-Capacity Internet Access for Maximum Performance

When your business demands high-capacity, mission-critical bandwidth, Covad Wireless HiCap solutions deliver.

HIGHLIGHTS

- **High Bandwidth**—Symmetric speeds from 10 to 45 Mbps
- **T3/DS3 Performance**—The affordable alternative to a fractional DS3 or T3 line
- **Fast Install**—Up and running in as little as 14 business days
- **Convenient**—LAN-ready Fast Ethernet handoff with public, static IP addresses
- **Reliable**—99.99% uptime targets backed by full industry-standard service level agreements (SLAs)
- **Expert Support**—24x365 network monitoring and technical support

HIGH BANDWIDTH INTERNET ACCESS. Covad Wireless HiCap service delivers high bandwidth Internet access in speeds ranging from 10 to 45 Mbps. Covad Wireless HiCap is ideal for companies that:

- Use bandwidth-intensive applications
- Transmit large volumes of data, text, images, or video
- Run their own web, email, database, or application servers
- Host online applications
- Conduct or rely on videoconferences or webcasts
- Produce or edit music or video content
- Use remote online data backup services
- Create or transmit high-end designs, 3D modeling, or animation
- Push the limits of their existing multi-megabit Internet access service

ENTERPRISE-CLASS CONNECTIVITY. Covad Wireless HiCap service delivers flexible, scalable, and cost-effective enterprise-class connectivity. It's delivered using licensed microwave technology that links your business directly to Covad Wireless's network and the Internet. This eliminates dependence on traditional telco infrastructure while providing a high-bandwidth, low-latency, reliable service.

QUICK INSTALL. Covad Wireless HiCap service can be installed in as little as 14 business days for 10, 15, and 20 Mbps service and as little as 30 business days for 30–45 Mbps service. This is often much faster than laying down fiber cable or installing a T3 / DS3.

COST EFFECTIVE. Because Covad Wireless HiCap service does not rely on an expensive network of landline cables, our cost structure is lower than that of many large telecom providers. We share the benefits of our lower cost structure with our customers by offering very competitive pricing that allows you to boost your bottom line.

CONVENIENT CONNECTION. Our HiCap service includes a convenient Fast Ethernet interface that's ready to connect to your network, eliminating the need for additional expensive T3 / DS3 cards and routers.

REDUNDANT CONNECTION FOR T3 OR FIBER. For enterprises with existing T3 / DS3 or fiber access, Covad Wireless HiCap service can provide an essential alternate path to the Internet. Many of today's businesses suffer immediate losses in revenue and productivity if their Internet connections go down, since they rely heavily on web-based applications such as CRM, document management, ERP, VoIP, SaaS, and video conferencing.

Covad Wireless Business Continuity Solutions

Don't Risk Internet Downtime

Network downtime diminishes productivity and eats profits. A survey from Infonetics indicates that 68% of businesses suffer between \$1,000 and \$10,000 per hour of lost productivity due to network outages.* For some companies, it's much higher.

Many companies try to protect against downtime by installing two T1s or DSL lines—only to have both lines go down at the same time because they share the same phone company conduits and wiring centers. A redundant Internet solution from Covad Wireless reduces this type of risk.

Two Solutions for Business Continuity

Covad Wireless offers two solutions for businesses seeking high availability and redundancy for your business Internet access needs. Both options give your business increased protection against disruptions due to man-made or natural disasters.

- Full Redundancy from Covad—Get a Covad Wireless Super-T connection backed by a standard Covad T1 or DSL line.
- Backup to your Existing T1—Add a Covad Wireless Super-T as a backup to your existing T1 service

Diversify with Covad for Maximum Availability

Covad combines the strengths of our wireless and wireline solutions to provide increased levels of reliability for your business. Covad helps provide business continuity with a T1-class wireless connection backed by a T1 or DSL line:

- Covad Wireless Super-T. The ideal high-speed primary Internet connection for companies with mission-critical business applications. It's fast, flexible, and provides T1-class performance and reliability. Covad Wireless Super-T service is based on our fixed wireless technology and is independent of phone company lines and infrastructure.
- Covad Backup Connection. Our Covad Wireless Super-T connection is backed by your choice of a dedicated Covad Backup T1 or Backup DSL line. The primary service

automatically fails over to the redundant backup line to keep your business connected in the event of a service disruption.

Already Have a T1 but Need a Backup?

If you already have a T1 line from another provider, Covad Wireless Super-T service can provide the ideal solution for business continuity and disaster recovery. A Covad Wireless Super-T is independent from the phone company's network infrastructure and provides full path and network diversity that is not affected by scheduled or emergency outages on your existing T1 line.

With a properly configured dual-WAN firewall (available separately from many network integrators and resellers), adding Covad Wireless Super-T service to your existing standard T1 may also provide automatic failover, bandwidth aggregation, load balancing, and other features.

For more information on both of these business continuity solutions, please see our [datasheet](#).

* The Costs of Enterprise Downtime, North America 2004, Infonetix Research

BUSINESS CONTINUITY REDUNDANT INTERNET ACCESS

HIGHLIGHTS

- Essential element of your business continuity plan
- Fully redundant, path-diverse connections for high availability
- Single-provider, managed solution
- Automatic failover to backup connection
- Flexible speeds up to 6 Mbps for primary and backup lines
- Scalable bandwidth—easily upgraded as needs change

Don't Risk Internet Downtime

Network downtime diminishes productivity and eats profits. A survey from Infonetics indicates that 68% of businesses suffer between \$1,000 and \$10,000 per hour of lost productivity due to network outages.* For some companies, it's much higher.

Many companies try to protect against downtime by installing two T1s or DSL lines—only to have both lines go down at the same time because they share the same phone company conduits and wiring centers. A redundant Internet solution from Covad Wireless reduces this type of risk.

DIVERSE CONNECTIONS FOR MAXIMUM AVAILABILITY. Covad combines the strengths of our wireless and wireline solutions to provide increased levels of reliability for your business. This unique approach ensures that if your primary Internet connection is disrupted, your service automatically switches over to a backup connection—keeping you online and in business.

Covad helps provide business continuity with a T1-class wireless connection backed by a T1 or DSL line.

- **Covad Wireless Super-T.** The ideal high-speed primary Internet connection for companies with mission-critical business applications. It's fast, flexible, and provides T1-class performance and reliability. Covad Wireless Super-T service is based on our fixed wireless technology and is independent of phone company lines and infrastructure.
- **Covad Backup Connection.** Our Covad Wireless Super-T connection is backed by your choice of a Covad Backup T1 or Backup DSL line. The primary service automatically fails over to the redundant backup line to keep your business connected in the event of a service disruption.

Customers have found that our business continuity solutions deliver increased levels of uptime and reliability compared to a single-connection service.

* The Costs of Enterprise Downtime, North America 2004, Infonetics Research.

BUSINESS CONTINUITY SERVICE OPTIONS. Start by choosing the Covad Wireless Super-T speed for your primary Internet connection. Then choose either a Backup T1 or Backup DSL line, depending on your business requirements.

FEATURE	SUPER-T WITH BACKUP T1 OPTION	SUPER-T WITH BACKUP DSL OPTION

Temporary Internet Service for Conferences, Events, and Projects

When your company or group needs temporary Internet service, get connected with Covad Wireless Event Service. Covad Wireless can deliver temporary high-speed Internet access for hours, weeks, or months. Covad Wireless Event Service provides the high bandwidth you need and can typically be installed very quickly—even in the most unusual locations.

Broadband for Events and Projects

Covad Wireless Event Service is extremely flexible and provides fast, reliable Internet connectivity for meetings, conferences, and short-term projects including:

- Company or customer events
- Sporting events
- Press conferences
- Trade shows
- Film festivals, concerts or on-location film shoots

Choice of Bandwidth

Our standard event service delivers performance options from 2 Mbps to 6 Mbps. For larger events or other high-bandwidth needs, we can provide speeds from 10 Mbps to 40 Mbps—comparable to a full DS3 line.

Indoors, Outdoors, Anywhere

In addition to providing Internet access in hotels, convention centers, and conference centers, Covad Wireless can also serve less conventional locations, including parking lots, tents, film sets, and amphitheaters. We have even provided Internet access on the beach for a surfing competition.

Fast Installation

Our professional technicians can typically install your Internet connection in as little as three to seven business days. Covad Wireless provides you with a single Fast Ethernet port that's ready to connect to your network. After we install the service, you can connect it to your gateway router, firewall, LAN switch, or Wi-Fi access point. After your event or project is

complete, our technicians will return to de-install and remove the equipment.

Simple Billing

Covad Wireless Event Service is billed as a one-time fee that covers all Internet access costs for up to one month. This includes initial planning, installation, and teardown.

24x365 Support

In addition to 24x365 network monitoring, we have dedicated technical support staff to ensure that we meet or exceed our customers' expectations.

Overview

Using Broadband Wireless Access for XO VoIP, Ethernet Solutions, MPLS IP-VPN, Private Line and DIA services, businesses in many metro areas across the country and organizations with campus environments can get easy-to-install, high-speed connections that also help meet requirements for physically redundant facilities. In this way, Broadband Wireless Access facilitates Continuity of Operations and Disaster Preparedness planning with a reliable, redundant and resilient communications path.

As the nation's largest holder of Local Multipoint Distribution System (LMDS) spectrum with licenses in 80 metropolitan markets across the United States, XO Communications uses this wireless technology to extend the reach of the XO 19,000-mile nationwide fiber network. From wireless hubs deployed on the XO fiber network, XO Communications can connect customer locations directly to our network using high-speed, point-to-point wireless links to deliver a number of services and for network redundancy and business continuity solutions.

Broadband Wireless access helps fill the gap between fiber- and copper-based facilities, with carrier-grade reliability and the capacity to accommodate fluctuating network traffic. With Broadband Wireless Access, you can move more data, faster.

XO[®] BROADBAND WIRELESS ACCESS SOLUTIONS

Using Broadband Wireless Access, businesses in many metro areas across the country and organizations with campus environments can get easy-to-install, high-speed connections that also help meet requirements for physically redundant facilities. In this way, Broadband Wireless Access facilitates Continuity of Operations and Disaster Preparedness planning with a reliable, redundant and resilient communications path.

Bridging the Gap

XO provides Broadband Wireless Access for XO Ethernet, Private Line and DIA services*—in speeds ranging from 10 Mbps to 1 Gbps. Broadband Wireless Access helps fill the gap between fiber- and copper-based facilities, with carrier-grade reliability and the capacity to accommodate fluctuating network traffic.

Move Data Faster

With Broadband Wireless Access, you can move more data faster. These solutions increase business productivity and provide you with:

- Better support for web applications that demand higher bandwidth, and dedicated bandwidth capable of supporting peak data demands
- Scalable bandwidth capacity
- Seamless support for migrating from Time Division Multiplexing (TDM) to Internet Protocol (IP) infrastructure

Network Reach

The XO carrier-grade Broadband Wireless Access greatly extends the availability of high-speed Ethernet with:

- Licensed spectrum that covers 75 of the largest markets in the continental United States
- Average of nearly 1 GHz of spectrum per market
- Per-path mileages up to 13 miles, depending on market

Reliability

XO uses standard IEEE 802.3 10BaseT and 100BaseT interface support, which can serve both traditional voice and IP services off a common network platform. XO Broadband Wireless Access provides:

- Carrier-grade Service Level Agreements (SLAs), including 100% service level availability
- Network monitoring and support services 24 hours per day, 7 days a week
- Top performance, connectivity and throughput from the XO Tier 1, fully peered, nationwide IP network

* Subject to availability

Security

Our licensed wireless spectrum reduces the potential for signal interference from unlicensed spectrum users, and supports both primary and redundant connections.

XO Broadband Wireless Access delivers dedicated, reliable, robust, physically redundant communication paths to help organizations with campus environments—such as educational institutions, first responders and hospitals—to comply with their Continuity of Operations requirements. What's more, XO can provide guaranteed throughput for wireless backhaul in public safety-related voice, data and surveillance networks.

- Encryption devices can be installed at either end of the radio link
- Advanced Encryption Standard (AES) can be applied internally to the radios
- Can support transport of real-time, high-definition video streams for surveillance networks and data

Value

Broadband Wireless Access can lower operating costs because there is no need for additional circuits or new Customer Premise Equipment (CPE). Furthermore, Broadband Wireless Access is easy and quick to install and upgrade as your needs change—all at more cost-effective rates than traditional "last -mile" offerings.
