Fixed Wireless

Overview

Features

Resources

PAETEC's Fixed Wireless offers you an alternative last-mile and metro-area data and voice transport solution that can complement or replace a portion of your existing physical network infrastructure. A Fixed Wireless solution allows you to:

- Protect your network from serious outages
- Maximize your network's operational efficiencies by sharing your communications load across multiple transport paths
- Often generate cost savings when compared to other local access and diversity options

Fixed Wireless can be either a standalone point-to-point solution, or bundled with other PAETEC services as part of a business continuity solution. In the latter case, PAETEC will provision secure, reliable transport links that will provide your network with physical layer diversity including:

- Circuit / "last-mile"
- Building point-of-entry
- Switch / ILEC (Incumbent Local Exchange Carrier) wire serving center

Product Name:

Fixed Wireless

Product Availability:

Fixed Wireless solutions are available to customers in all PAETEC markets.

Ideal Customer Profile:

This solution is a perfect fit for customers requiring multi-megabit to Gigabit access speeds. In particular, customers who have the need for physical layer diversity in their organization's network infrastructure.

CPE Requirements:

- Radio, antenna, and mounting hardware located on rooftop of building
- Network interface unit located in network room
- Cabling (fiber or coax) between rooftop and network room

FIXED WIRELESS | In Brief

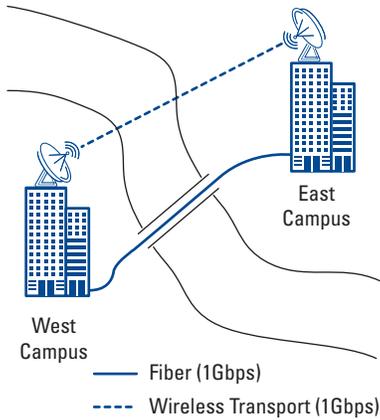

Solution Description:

PAETEC's Fixed Wireless offers you an alternative last-mile and metro-area solution to complement or replace your existing physical infrastructure. Fixed wireless access can be either a standalone point-to-point solution, or bundled with other PAETEC services as part of a business continuity solution. In the latter case, PAETEC will provision secure, reliable transport links that can provide your network with the following types of physical layer diversity:

- Circuit / "last-mile" diversity
- Building point-of-entry diversity
- Switch / ILEC wire serving center diversity

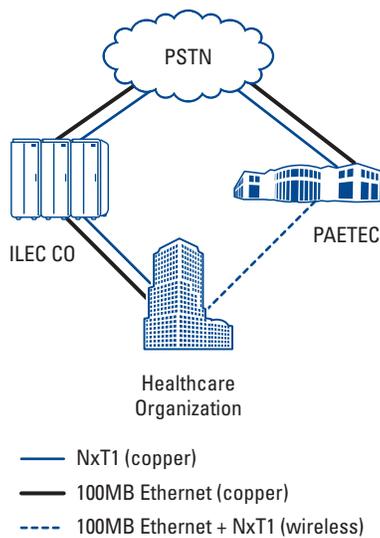

Product Capabilities:

- Transport bandwidths of 20Mbps to 1Gbps
- Support of voice, data or combined voice / data traffic
- Circuit availability of 99.999% (or better) in all weather conditions
- Secure, interference-free operation over FCC-licensed frequency bands

Application One – Private Line Diversity

In their main NJ location, a small college operates a campus on each side of the Jersey River – these campuses are 1.5 miles apart. Each campus contains classrooms, administrative buildings, and residence halls. All of the college’s Internet services are delivered to the Tech Center on the East Campus, so the college provisions a point-to-point fiber circuit to provide the West Campus with data service. The fiber runs across the river via the local bridge. When there is construction on the bridge, the college experiences frequent outages on the point-to-point circuit. The college asked PAETEC to engineer and install a wireless transport circuit that directly links the East and West Campuses. After using PAETEC’s Equipment for Services (EFS) program to finance the equipment purchase, the college now owns an additional 1Gbps of bandwidth between campuses that will not be affected by any local construction projects.

Application Two – Access Line Diversity

A healthcare management organization offering comprehensive hospital services within a major metropolitan area in Florida recently received voice services from the ILEC over sixteen DS-1 access lines, along with data services delivered over two 100MB Ethernet connections. All of the services were provisioned through the nearby ILEC central office (CO). The organization’s CIO recognized that if the CO were ever damaged in a hurricane, all of their communications services could be at risk. After a field survey confirmed line-of-sight, PAETEC recommended that they reallocate eight DS-1 voice circuits and 100MB of Ethernet service over a wireless transport circuit provisioned between the organization’s headquarters and the PAETEC switch. With the activation of the wireless circuit, the healthcare organization was able to balance their voice and data network traffic between the ILEC and PAETEC circuits, and has yet to experience a simultaneous outage.

BUSINESS CONTINUITY SOLUTIONS

personalizing business communications

WHY PAETEC BUSINESS CONTINUITY SOLUTIONS?

You can never be sure when the next disaster will affect your business, but you can be sure that you are prepared for when it does. Business Continuity Solutions from PAETEC offer effective tools for your business continuity plan, providing you with disaster preparedness, network diversity, and application recovery options to ensure that your business is ready for whatever lies ahead.

PAETEC's Business Continuity expertise provides a comprehensive blend of services and solutions that can be tailored to create a personalized business continuity plan that fits the specific needs of your business. For example, a company could see its phone lines flooded by a high volume of incoming calls. Without effective planning, these excessive calls may simply be met with a busy signal, resulting in unhappy customers and potentially lost revenue, but with Business Continuity Solutions from PAETEC you can ensure that every call gets through.

By offering a comprehensive and personalized blend of services, PAETEC is able to provide dedicated solutions that are expertly planned, designed and implemented to fully address the challenges that businesses face today.

Productivity and Efficiency – Stay up and running even in the event of a disaster.

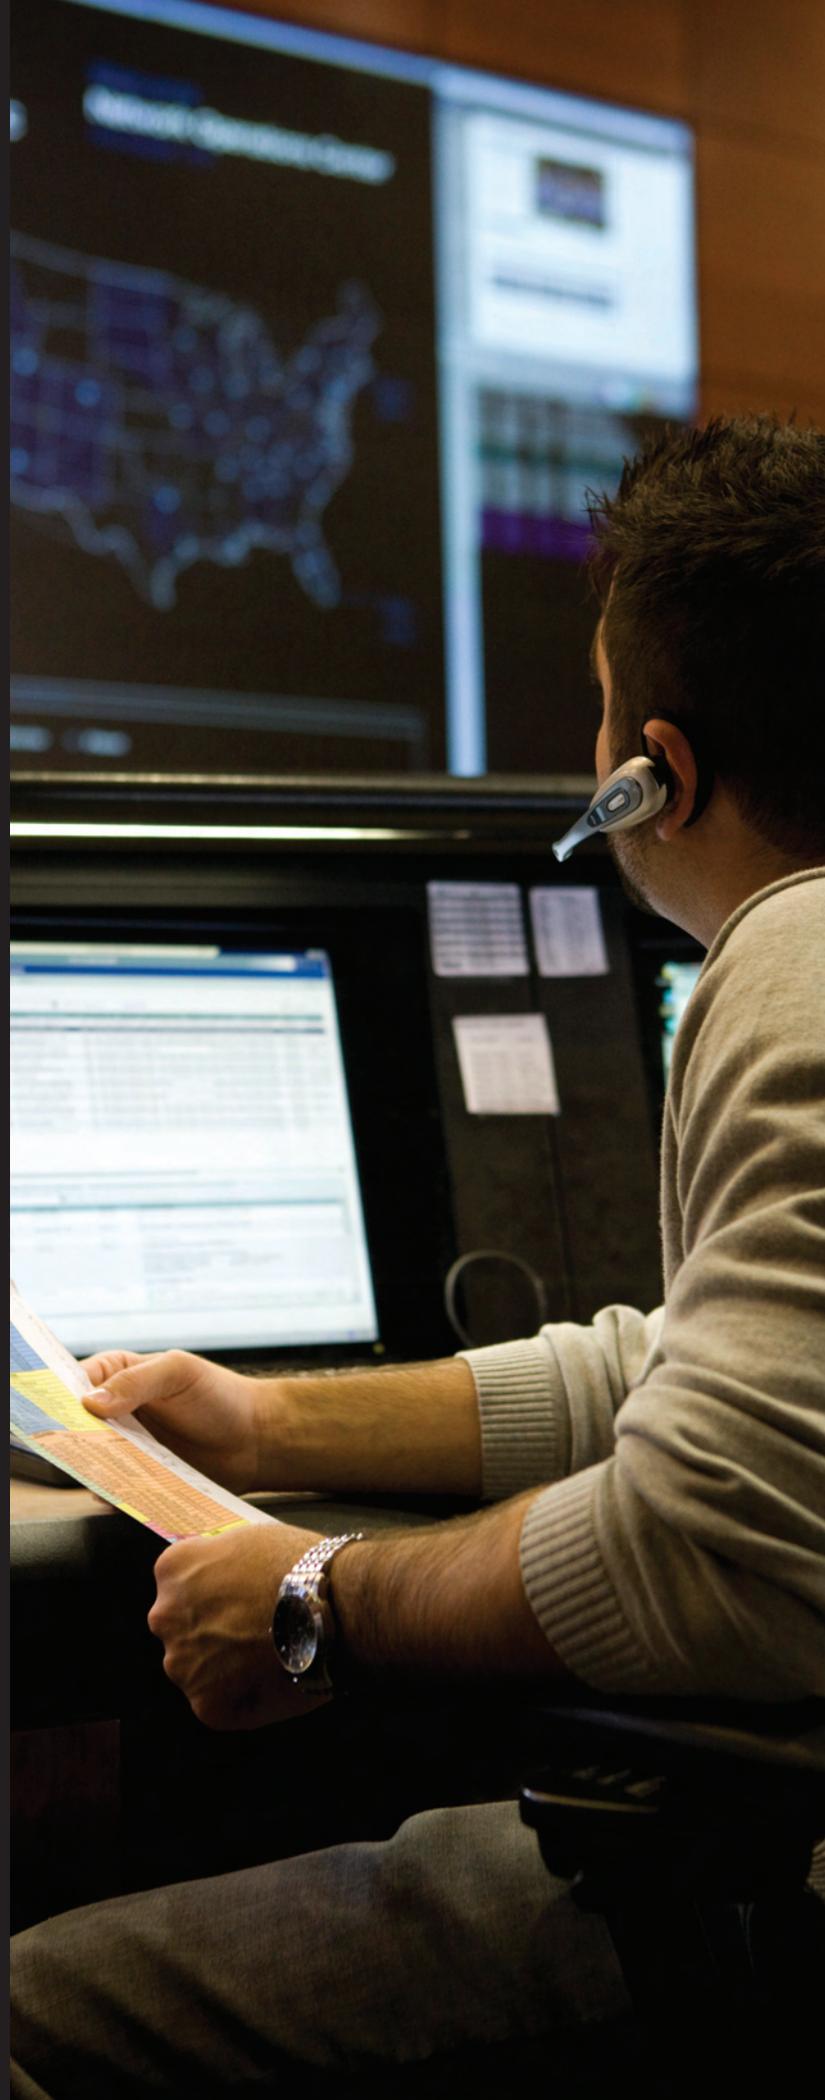

Network Diversity – Complement your existing infrastructure to create a more robust network.

Security – Protect your business critical and sensitive information.

Peace of Mind – Let PAETEC manage your business continuity plan so you can focus on managing your business.

Cost-efficiency – Have a personalized solution created for your company's specific needs.

Regulatory compliance – Ensure your business adheres to all government and industry rules and regulations for record retention, disaster recovery for critical data, and more

NETWORK SECURITY AND DIVERSITY

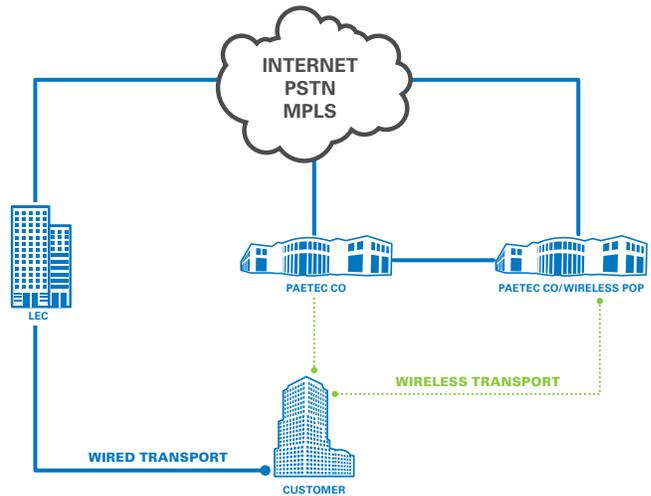

MPLS VPN – An IP-based network with inherent security and redundancy which offers an affordable way to build an enterprise network that delivers the performance, security, and reliability of a private-line network.

Fixed Wireless – A high-speed last-mile and metro-area alternative to your existing physical infrastructure that provides an alternate path to wire-line networks. These secure, reliable transport links can provide your network with the following types of physical layer diversity that eliminate single points of failure:

- Circuit / “last-mile” route
- Building point-of-entry “POE”
- Switch / ILEC wire serving center “LSO”

Network Diversity Engineering – Geographically diverse circuits routed to different PAETEC switches. PAETEC’s Network Diversity Engineering complements your disaster recovery plan by significantly reducing the chance of a complete service outage. Using diverse paths to our network, Network Diversity Engineering offers Point-of-Presence and Central Office diversity to provide redundancy for your network traffic.

ELIMINATE INFRASTRUCTURE POINTS-OF-FAILURE

Private Line – Secure site-to-site dedicated connectivity which makes for a cost effective reliable alternative.

Dynamic IP – PAETEC’s Dynamic IP service provides the ability to fully integrate voice, Internet, and VPN services on a single IP connection.

NETWORK AVAILABILITY AND REDUNDANCY

Direct Trunk Overflow (DTO) – A redundant path for calls to be received in which inbound traffic is re-routed to a pre-designated site or number. With DTO, in the case of an emergency or disaster at one location, all calls can quickly and easily be routed to a different location.

Toll-Free Routing Consultation – Incoming calls with flexible routing features that enable you to manage traffic based on your needs.

Enhanced Toll-Free – Toll-free calls routed on-demand to different locations. Routes calls in real-time to other facilities based on agent availability.

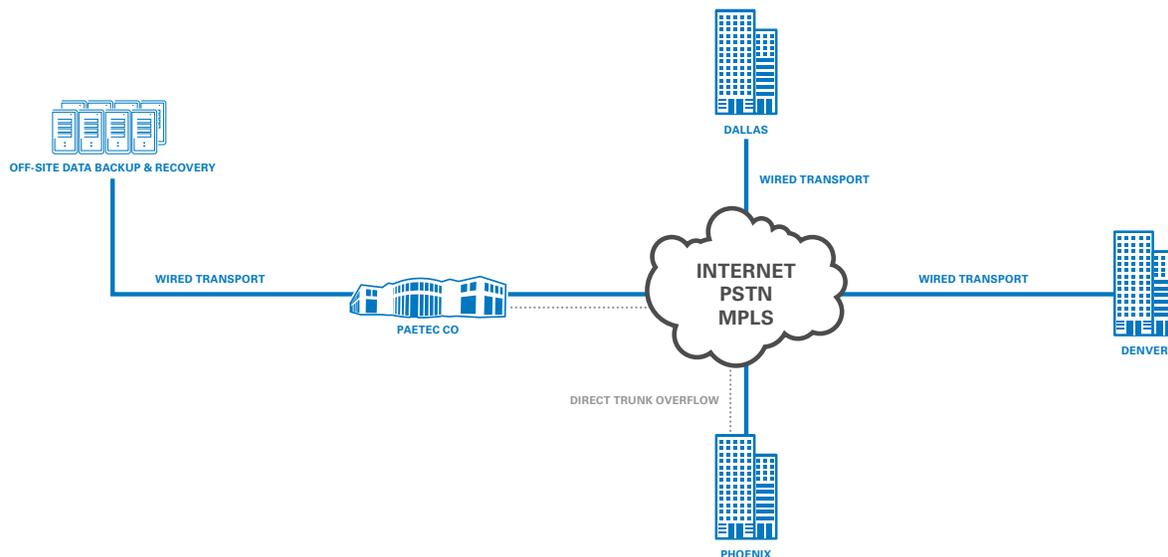

DATA SECURITY AND INTEGRITY

Data Backup & Recovery – Offsite magnetic disk storage for your critical data:

- Has professional tools and options to let you confidently back up and restore your servers to a secure, offsite location
- Data backups are encrypted and compressed across the PAETEC IP backbone protecting your data and saving you valuable bandwidth and time
- Allows authorized, secure, point-and-click data recovery for any file or database

Dedicated Host Server – PAETEC-managed server within data center facilities:

- A robust selection of servers with monitoring and management options for a complete third-party solution
- Dedicated Hosted Server applications include Shared Web Hosting, Applications Hosting, and off-site Data Backup and Recovery

Wireless WAN

BlackBerry Mobile Voice System

Custom Network Solutions

Integrated Office

Managed Solutions

Unified Communications

Extend your premise-based Avaya, Cisco, or Tango Networks supported PBX to your mobile phones with Sprint Mobile Integration, so your employees become more mobile and reachable with one phone number and one voice mail, maximizing your mobility investment.

Key Features

- Reduces trunks with intelligent signaling/routing.
- Class of Service (CoS) is extended to your mobile phones.
- Mobile calls are tracked and logged on your existing TDB or IP PBX.
- Abbreviated Dialing - use the same 4,5,6, and 8-digit dialing.
- Sequential ring.
- Single Voicemail with notification on both phones.
- Group and Personal Call Controls.
- Service Management.

Key Benefits

Increased employee productivity:

- Provide employees with a single number where they can be reached-- in or out of the office.
- Receive all voicemail messages in one mailbox.
- Use the same familiar dialing and features between desk phones on Sprint Wireless phones.

Increased Call Management:

- Ensure appropriate wireless use with call restrictions.
- Simplify corporate governance with call auditing capabilities.
- Enable implementation of billing and call codes from the wireless handset capabilities.

Increased Cost Efficiencies:

- Reduce costs through reduction in desktops for mobile employees.
- Eliminate costly local trunks.

Improved Customer Service:

- Assure that customers and prospects reach your team on first attempt.
- Resolve issues and capitalize on opportunities without phone tag.

Unified Communications

Whether you're operating inside of a building or across a campus, Sprint Custom Network Solutions (CNS) will give you and your employees the freedom to utilize any combination of cellular, land-mobile radio, paging, RFID and WiFi wireless protocols in a more efficient, cost-effective manner.

We'll design, deploy, maintain and support the wireless workplace networks to make it happen. You'll enjoy the power, productivity and efficiency of Sprint voice and data communications wherever business takes you.

Key Features

- **Land Mobile Radio (LMR) Solutions** - offer augmentation of current system, interoperability with existing two-way radios and an emergency response team for public safety.
- **Wireless LAN Infrastructure** - allows dual iDEN/CDMA and WLAN deployments, full access to 802.11 protocols and provides full broadband data access.
- **Emergency Response Team (ERT)** - works side-by-side with public safety agencies and enterprise customers to coordinate communications during emergencies and other large-scale events.
- **Fixed Mobile Convergence Solutions** - allow for complete and seamless wireless voice integration to enterprise PBX.
- **Premium Call Center & Trouble Shooting Support** - provides dedicated, 24/7 CNS customer support, individually assigned care representatives and rapid response outage resolution.
- **Network Monitoring/Outage Notification** - provides a 10-day notice and 1-day reminder for advanced maintenance, emergency maintenance and unplanned outage notifications, and for network uptime/downtime response.

Time Warner Cable

Maximize the power of your 4G enabled device

Increase your mobility and productivity with 4G speed from Time Warner Cable

Call to Sign Up
1-888-662-4577

[Overview](#)
[4G Benefits](#)
[Road Runner Mobile](#)
[Business Class Mobile](#)

Get your Business edge with Time Warner Cable

To succeed in today's competitive business environment, you must have an edge. And a super-fast Internet connection while you're away from the office could make all the difference. On the 4g network, Business Class Mobile delivers the speed you need to stay ahead of the competition so you can download large files, deliver presentations, and video conference from your laptop - all while on the go.

Greater Productivity - Do more, in more places, with access to a Mobile network that can enable employees to be productive while on the go.

Cost Savings - Easily connect to the Internet to access e-mail and business applications wirelessly using 4G coverage in town and other 4G cities.

Faster Wireless Speeds - Quickly send and receive large files with up to 6Mbps download and up to 1Mbps upload speeds on the 4G network.

A plan to keep you connected, and productive

As well as having the technology to help you succeed, Time Warner Cable also offers month-to-month plans for 4G embedded laptops that meet your budget and objectives.

4G Premium Plan

- 4G speeds in town and other 4G cities
- Unlimited data allowance
- Month to month service plans
- \$40 with Time Warner Cable data service
- \$45 without Time Warner Cable data service

Our Mobile Coverage

We have you covered. With so many cities where you can access the 4G Mobile network, you're free to hop around the country. Here are those cities:

Dallas	Honolulu
San Antonio	Maui
Austin	Atlanta
Corpus Christi	Las Vegas
Wichita Falls	Chicago
Wavo	Philadelphia
Killeen	Baltimore
Charlotte	Salem
Raleigh	Boise
Greensboro	Bellingham
Portland	

Even more cities will become available in the near future:

Washington DC	Boston
New York	Seattle/Tacoma
Houston	Cleveland
Kansas City	Cincinnati
Rochester	Columbus
Syracuse	

Some restrictions and a \$35 dollar activation fee may apply. Subject to credit approval. Road Runner Mobile service is not available in all areas. Coverage not available in all areas. 4G service only available in certain metro areas. Prices are subject to change and exclude applicable taxes and fees. Service requires the use of a compatible wireless device; all services may not be compatible with Macintosh computers. 4G network speeds are up to 6 Mbps for downloads, and up to 1 Mbps for uploads. Actual throughput speeds may vary based upon individual circumstances or conditions.

Innovation

Innovating for the speed of life

At T-Mobile, investing in the future of our network is key to delivering innovative business solutions. Over the last three years, T-Mobile has invested over \$12 billion in our U.S. network alone. Our network will cover 200 million people by the end of 2010.

Take advantage of our blazing-fast network to search the web, download files, and share media on the go. Plus, we offer the latest in technology platforms and handsets to meet your business needs, including solutions from BlackBerry®, Windows® Phone, Android™, Symbian®, and Good Technology.

Innovations that are faster than fast

Experience 4G-like speeds on our new HSPA+ network.* HSPA+ helps deliver an extremely fast mobile web experience and is already a world standard operating in 24 countries around the world. Building a faster network for the way you work and live is just one of our many industry-leading innovations, including:

- First major US carrier to adopt the new, faster world-standard HSPA+ technology
- First carrier to offer Wi-Fi Calling to help organizations dramatically lower international calling costs
- First to develop and deploy embedded SIM cards to the US market

[Learn more about T-Mobile's blazing-fast network >](#)

*Based on 4G network speeds currently available to mobile device users in the US; HSPA+ available in limited markets.

T-Mobile Value Global Solutions Innovation Move to T-Mobile Government Machine-to-Machine

Machine-to-Machine

Accelerating the M2M opportunity

T-Mobile is a recognized leader in M2M communications (machine-to-machine) and we're forging new ground every day by supporting customers with innovative solutions that connect to and monitor business and personal assets. When it comes to global M2M data coverage, our network and international roaming partners put us in the driver's seat. And we're driving the development of new industry standards to create custom SIM form factors for facilitating faster data connections for new and innovative mobile technologies that save time, money, and lives.

Partner with the M2M solutions leader

At T-Mobile, we dedicate ourselves to being the best and easiest mobile operator to do business with to achieve your M2M goals. Benefit from a streamlined partner certification process and a flexible approach to activation, including:

- Partner-focused business model
- Self-serve billing platform
- Flexible, aggressive embedded wireless rate plans
- Robust 3G/EDGE/GPRS wireless network
- Embedded SIM support
- Dedicated sales and engineering support
- Automated real-time activation

For more information on M2M communication solutions or to drive innovation as one of our M2M partners, [contact us](#).

T-Mobile Value | [Global Solutions](#) | [Innovation](#) | [Move to T-Mobile](#) | [Government](#) | [Machine-to-Machine](#)

[Overview](#) | [Wi-Fi Calling for Business](#) | [Wi-Fi Calling with MobileOffice](#) | [T-Mobile myOffice](#)

Overview

See the value of T-Mobile
T-Mobile business solutions help keep your business and your people connected around the globe. Our innovative spirit drives us to deliver new ways to reduce wireless costs while improving productivity. As a pioneer in Wi-Fi calling, we're helping businesses achieve significant savings for both domestic and international calling. Our HSPA+ network delivers 4G-like speeds*. And we've extended innovation to our unlimited business calling plans, like Even More for Business™, a money-saving option to meet your calling needs. Learn more about our value advantages.

- [Wi-Fi calling](#)

- [Devices](#)
- [Business calling plans](#)
- [Coverage](#)

*Based on 4G network speeds currently available to mobile device users in the US; HSPA+ available in limited markets.

Wi-Fi calling pioneers

T-Mobile was the first major U.S provider to offer Wi-Fi calling. This unique business solution helps you save money on both domestic and international calling. With a T-Mobile Wi-Fi calling-enabled phone and a Wi-Fi network, you can save money by using less calling plan minutes. You could also save while traveling internationally because calls made over Wi-Fi are rated as originating in the US, regardless of where the caller is located. Wi-Fi calling can also provide coverage in difficult-to-serve areas no mobile provider reaches.

T-Mobile offers three Wi-Fi calling solutions and a broad selection of Wi-Fi calling-enabled devices to meet your global business needs:

- [Wi-Fi Calling for Business™](#)
- [Wi-Fi Calling with MobileOffice™](#)
- [T-Mobile® myOffice™](#)

Connect Your Business To The Cloud

In today's highly competitive environment, businesses are looking to cloud computing to reduce capital and operational costs.

Cloud computing enables businesses to deliver hosted services like CRM, HR, or accounting applications over the Internet with greater efficiencies. Users can access reliable, on-demand services in a flexible and affordable manner. These services are broadly divided into three categories: Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS) and Software-as-a-Service (SaaS). Benefits include open standards, scalable systems and service oriented architecture.

However, these benefits are not without challenges. With increased IT capabilities, IT Professionals are faced with ensuring that existing infrastructure supports these IT workloads. To meet these new complexities, reliable access to the cloud is more critical than ever.

Towerstream delivers the high speed, reliable bandwidth needed to bring your business to the clouds. Towerstream is the only redundant last mile solution that offers a 3-5 install, faster speeds, at a low price.

Using 4G technology, Towerstream offers:

- Dedicated bandwidth that cannot be over subscribed
- 99.99% guaranteed uptime
- Scalable bandwidth with just a phone call
- Lower latency and lower loss

What we do ● ● ●

Towerstream delivers [reliable, high-speed](#) Internet access seamlessly and securely at a lower cost than traditional providers

Towerstream owns its entire network and does not rely on the phone company to deliver a [fast install](#) to businesses in 11 major metropolitan markets.

Bandwidth options range from T-1 to 1.5Gbps, and support VoIP, [cloud computing](#), bandwidth on demand, wireless redundancy, VPNs, disaster recovery, bundled data and video services.

Using 4G technology, Towerstream delivers a wide variety of features including:

- **Speed and Scalability:** With bandwidth options ranging anywhere between 0.512Mbps and 1.5Gbps Towerstream can create the customized broadband solution to meet your business's needs.
- **Guaranteed 99.99% Reliability:** Towerstream delivers a very reliable last mile solution. We are the first wireless broadband provider to offer the "Five 9's" Guarantee to our customers.
- **Fast and Simple Installation:** By completely bypassing the local phone company and using multiple broadcast sites in several major cities, service is often installed in 3-5 business days or less

Internet Backup / Disaster Recovery • • •

Does your company have a plan for disaster recovery?

Did you know companies lose on average \$84,000 for every hour of downtime? Towerstream provides an alternative entry point to the Internet, ensuring true redundancy in an unexpected disaster.

If your business cannot afford to have downtime due to loss of Internet connectivity then a redundant service with Towerstream is the answer. Towerstream service is delivered via wireless bypassing the local phone company which creating a solution that is both redundant and extremely reliable. For a fraction of what down-time can cost you, Towerstream provides a guaranteed connection starting at only \$256/month*.

Towerstream is weather-resistant, backhoe-proof and provides a truly different way to connect to the Internet.

Symmetrical Bandwidth

Towerstream Internet connections are always symmetrical (bi-directional/duplex) with guaranteed bandwidth speeds, providing equal capacity for both uploads and downloads.

Simply stated, we guarantee that you will get the same powerful connection in both directions. Upload speed is particularly important to companies that use their connections for hosting, VOIP, video streaming, transferring data and more.

Many other companies' connections cap uploads at a much slower rate than downloads. At Towerstream, we hold strong that reliable performance should be available in each direction.

*For all the details on current promotions, please call (866) 848-5848 to talk to one of our knowledgeable representatives. *Prices based on a two year agreement.*

Speed

WE OWN THE LAST MILE

With Towerstream, your business is only one or two hops from the Internet. Your data travels at the speed of light, without any turns in transit along copper wires. In fact, we guarantee less than a 50ms delay on the last mile.

Run a trace-route on your network – let us compare it to how a Towerstream trace would work. We'll have better performance on the way to your destination, and you'll get faster downloads and uploads as a result.

Dedicated Facility

All of Towerstream's Internet connections are delivered directly from area base stations to the customer's building. By completely bypassing the local phone or cable company, there is no legacy outside infrastructure that your service must connect through before reaching the Internet. This gives Towerstream a huge advantage over the competition; there are far fewer failure points where the connection can be delayed or lost. Customers enjoy better reliability and better speeds with Towerstream.

Dedicated Bandwidth

Towerstream only provides businesses dedicated bandwidth connections – meaning the customer can use 100% of their connection 24/7/365.

DSL and Cable offer broadband connections that are “shared” Internet services between many users. The primary difference between these connections and Towerstream is something called “oversubscription.” If all DSL or Cable customers want to download a video simultaneously, the Internet connection is delayed resulting in customers not receiving the full amount of bandwidth that they signed up for.

Towerstream's network is engineered so customer's contracted bandwidth is always available. Unlike DSL and Cable, Towerstream's bandwidth is dedicated and symmetrical; meaning you have the same high quality performance for inbound and outbound traffic without exception.

Put the power of broadband into your business

Now there's a true business-grade Internet access service that can keep pace with your growing business—no matter where you do business. HughesNet Business Internet plans provide highly reliable, high-speed, always-on

connections that give you instant access to the critical business information you need—when you need it.

You have a business to run, not a network, and you need broadband Internet access for all your branch locations across the US, regardless of where they are located. Hughes understands. In fact, Hughes has been delivering managed network solutions to Fortune 500 companies for almost two decades. From this enterprise experience, Hughes has developed a robust suite of new Internet access plans specifically tailored to business.

With its advanced satellite technology, the HughesNet service delivers a secure, reliable broadband connection

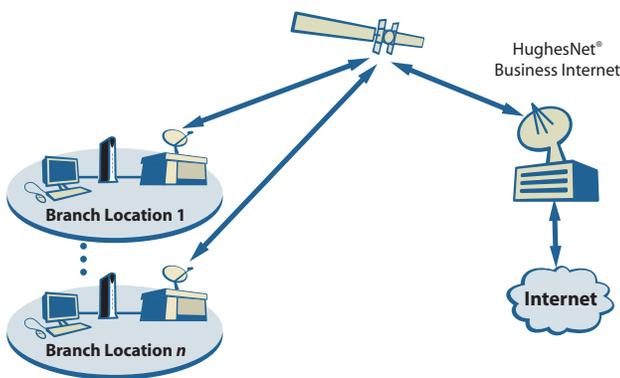

around the clock—so you can make the most of your business day. And since HughesNet delivers high-speed Internet over satellite—not over your telephone line—you can work online and have your phone or fax line available.

Satellite Broadband Internet Access for Business

- Get broadband anywhere—even where DSL and cable cannot reach and T1 lines are too expensive
- Connect at speeds up to 5 Mbps
- Instantly upgrade your plan as your business grows
- Competitive pricing and flexible billing plans
- Enterprise-grade equipment, installation, and customer care

HughesNet utilizes two-way satellite technology to link your business to the Internet. A certified HughesNet installer will connect your computer to the satellite modem and link it to the satellite dish (antenna) that's typically mounted on the roof of your commercial establishment. The satellite dish sends and receives information (for example; email, point-of-sale, Web pages, files) over the Internet and delivers it to your computer almost instantly!

Built for growing businesses like yours, there are seven HughesNet Business Internet plans to choose from, depending upon your business needs, with download speeds up to 5 Mbps. Whether a single location, or if you need to connect multiple branch locations—Hughes has a solution.

HughesNet®

HughesNet encompasses all broadband solutions and managed services from HUGHES, for large enterprises, governments, small businesses, and consumers bridging the best of satellite and terrestrial technologies. HughesNet solutions and services are marketed directly by Hughes and its authorized resellers and distributors throughout North America, Europe, India, and Brazil. In all

other regions of the world, Hughes products and services are available from a growing family of value-added providers and resellers. Hughes satellite products are based on global standards approved by the TIA, ETSI, and ITU standards organizations, including IPoS/DVB-S2, RSM-A, and GMR-1.

¹ Stated speeds not guaranteed. Actual upload speed will likely be lower than speed indicated during peak hours. Download speeds may be temporarily slowed in cases when system usage exceeds the download threshold for an extended period of time. See the HughesNet Fair Access Policy for more information at legal.hughesnet.com.

² Commercial installation is standard and is subject to possible additional installation charges. Enterprise installation is available for an additional \$200.00. Please see the HughesNet Professional Installation datasheet for details.

The HughesNet Business Solution Suite

In addition to primary broadband Internet access, Hughes has additional business solutions designed to meet the growing needs of your business, including broadband backup access to ensure your business stays online even during a landline failure, and a virtual private network (VPN) solution to provide secure networking between your locations.

With HughesNet, small business can now have business-grade broadband Internet access no matter where they are

located at speeds comparable to DSL, cable, and T1. As long as you have a view of the southern sky, you have broadband!

Find out why Hughes has deployed over a quarter of a million enterprise installations and how these businesses are enjoying the benefits of HughesNet. Put the power of broadband in your business.

For more information, contact Hughes at 1-877-337-3880 or visit business.hughesnet.com.

Frequently Asked Questions

Business Internet with VPN

Extend your small business network to even the most remote locations.

If your business has multiple locations, you face the challenge of trying to connect all your sites with broadband access that's both affordable and secure.

[▼ read more](#)

You may have gaps in your coverage—locations where DSL and cable Internet aren't available, and T1 is too expensive. Now, there's a solution for your small business network that can bridge the communications gap, reaching all your sites nationwide, no matter where they are, so your business is fully connected.

HughesNet® Business Internet with VPN is delivered using a standard HughesNet service plan in concert with a Hughes-certified VPN appliance. There's no need to replace the network in which you've already invested.

HughesNet Business Internet with VPN

- works seamlessly with your existing infrastructure
- creating secure access over the Internet
- giving you an easy way to extend your network to those hard-to-reach remote locations.

It gives you all the security, performance, and affordability you need to give your business the edge.

Secure, Cost-Effective, Nationwide Branch Networking

Your network is essential to your business. You need secure, high-speed broadband access to each of your branches regardless of location. When DSL and cable are not available or T1 lines are too expensive, Hughes has a solution.

Introducing HughesNet Business Internet with VPN (Virtual Private Network)—a secure, cost-effective branch networking solution available nationwide via broadband satellite.

HughesNet Business Internet with VPN gives you secure point-to-point VPN connections without the performance degradation that can occur when operating a VPN over a traditional broadband satellite connection. This simple-to-use, plug-and-play solution also uses industry-standard encryption to deliver secure connections no matter where your business is located.

HughesNet Business Internet with VPN delivers:

- **Security**—protects your data end-to-end
- **High speed**—business plan speeds as fast as 3 Mbps
- **Nationwide coverage**—even to locations not served by terrestrial broadband
- **Enterprise grade**—professional installation and 24x7 customer care support

HughesNet delivers the highest performance possible over a satellite broadband connection using a low-cost HughesNet-certified VPN appliance. Enjoy the security an industry-standard VPN solution provides over satellite, wherever your business is located—even where DSL and cable cannot reach.

How Does HughesNet Business Internet with VPN Work?

Using broadband satellite technology, HughesNet Business Internet with VPN gives you a superfast, always-on Internet connection secured via state-of-the-art VPN technology. Whether you need reliable broadband access for Internet access, Web-based intranet, point-of-sale (POS) or back-office applications, HughesNet Business Internet with VPN delivers your applications efficiently and securely.

The HughesNet Business Internet with VPN solution is delivered using a standard HughesNet Business Internet plan in concert with a HughesNet-certified VPN appliance. The HughesNet-certified VPN appliance is specifically designed to secure the Internet connection while providing the best performance possible over a broadband satellite connection. Unlike other solutions, HughesNet Business Internet with VPN maintains the speeds of the broadband satellite connection. Now you can enjoy the highest speeds HughesNet broadband access can offer—securely.

Adhering to industry-standard encryption, HughesNet Business Internet with VPN doesn't require you to replace your existing VPN networking infrastructure and investment. The solution works seamlessly with your existing VPN solution so that now you can easily extend your secure network to those hard-to-reach remote locations.

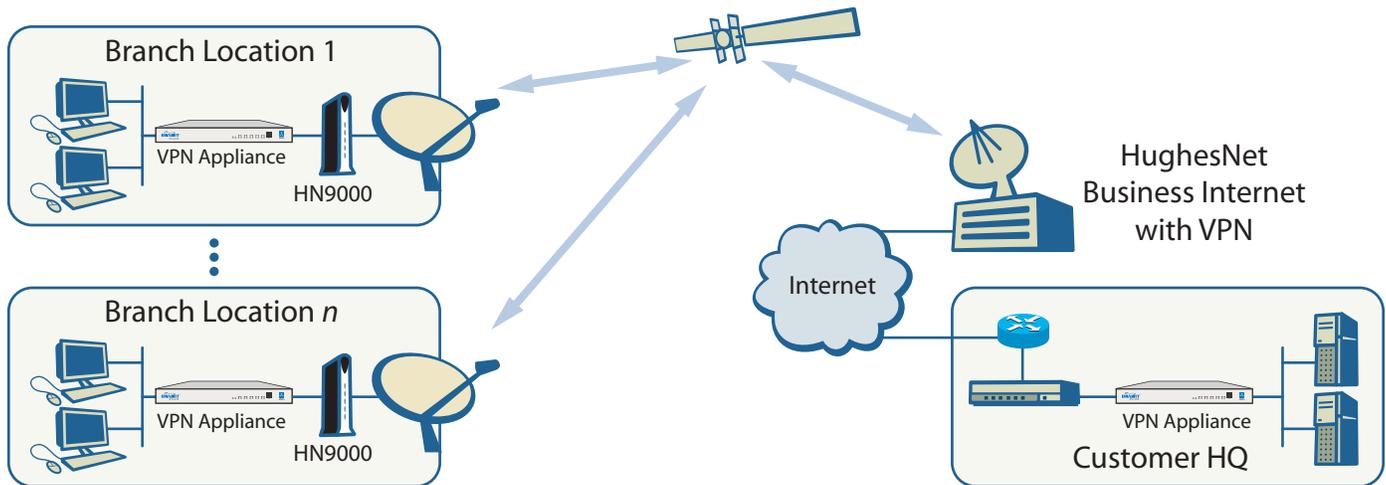

HughesNet encompasses all broadband solutions and managed services from HUGHES, for large enterprises, governments, small businesses, and consumers bridging the best of satellite and terrestrial technologies. HughesNet solutions and services are marketed directly by Hughes and its authorized resellers and distributors throughout North America, Europe, India, and Brazil. In all other regions of the world, Hughes products and services are available from a growing family of value-added providers and resellers. Hughes satellite products are based on global standards approved by the TIA, ETSI, and ITU standards organizations, including IPoS/DVB-S2, RSM-A, and GMR-1.

HughesNet service plans include speeds of up to 1 Mbps upstream and 3 Mbps downstream. Each remote branch location requires one of the HughesNet Business Internet plans (BI-100 to BI-600) with at least one static public IP address. The host location must have a broadband Internet connection with a public IP address and one HughesNet-certified VPN appliance. One VPN appliance at the host location can support up to 30 remote branch office VPN appliances. The host location can be deployed with any broadband connection (DSL, cable, or T1) from the broadband provider of your choice and does not require a HughesNet Business Internet satellite service plan.

For those branch office locations requiring satellite service, a HughesNet-certified installer will connect the HN9000 satellite modem to your remote LAN and connect it to a satellite dish (antenna) typically mounted on the roof of your commercial building. The satellite dish sends and receives information and delivers it to your computers almost instantly.

A HughesNet-certified VPN appliance will be installed at your headquarters location and at each branch office location. The VPN appliance originates and terminates the VPN connection between your headquarters and branch office locations. The VPN appliance not only establishes VPN connections, but is a fully functioning router and acts as a firewall for added security.

The HughesNet Business Solutions Suite

In addition to HughesNet Business Internet with VPN, Hughes has additional business solutions designed to meet the growing needs of your business. The HughesNet Business Solutions suite includes broadband Internet access to provide business-grade broadband access via satellite and a broadband backup solution to provide always-on connectivity for your locations in the event of landline failures.

With HughesNet, small businesses can now have secure, business-grade broadband Internet access at speeds comparable to DSL, cable, and T1 no matter where they are located. As long as you have a view of the southern sky, you have broadband—now with a secure VPN connection!

Find out why Hughes has deployed over a quarter of a million enterprise installations and how these businesses are enjoying the benefits of HughesNet. Put the power of broadband in your business.

For more information, contact Hughes at 1-877-337-3880 or visit business.hughesnet.com.

Private Networking via Broadband Satellite

HughesNet offers state-of-the-art private networking capabilities that are ideal for businesses and government agencies with multi-branch networks. Get the performance you need to support all your applications, from data, and voice to high-definition video—all with the security you need. Simply connect all of your locations via satellite for a secure, private network that doesn't touch the Internet.

With a small satellite dish and router at each of your locations, HughesNet can deliver a more cost-effective private network than terrestrial alternatives, such as MPLS and private line solutions. Connect all your locations nationwide with an affordable private network from HughesNet.

HughesNet Private Networks deliver enterprise-grade networking at a price that growing businesses can afford. Ideal for multi-branch networks in industries such as retail, restaurant, gas stations, finance, manufacturing, utilities, and agriculture.

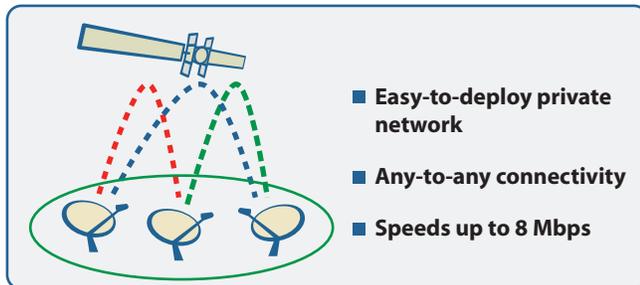

Unique Capabilities

Branch-to-Branch/Any-to-Any Connectivity

Hughes uses on-board satellite routing technology to enable branch-to-branch/dish-to-dish connectivity. Each location with its own small satellite terminal is *directly* connected to all other branches via a single satellite hop for superior performance. This “mesh” any-to-any connectivity eliminates the need for an expensive central hub or network operations infrastructure, as well as landline connections. HughesNet lets you build an easy-to-deploy private network that doesn’t touch the Internet.

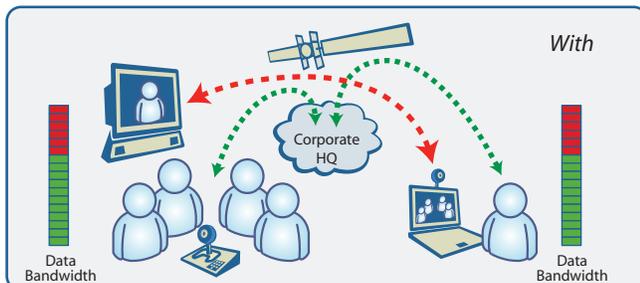

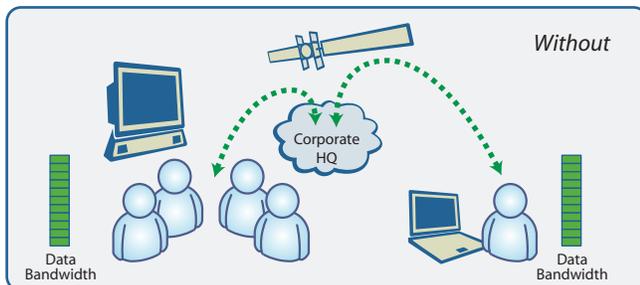

The Private Network and satellite sends data and allocates bandwidth when and where the business needs it.

Branch-to-Branch/Any-to-Any Connectivity

Bandwidth-on-Demand

Hughes provides a unique bandwidth-on-demand capability designed to support Constant Bit Rate (CBR) applications such as voice, video surveillance, and new high-definition telepresence applications for true “life-like” face-to-face meetings which eliminate expensive business travel. Pay only for the bandwidth you use, when and where you need it.

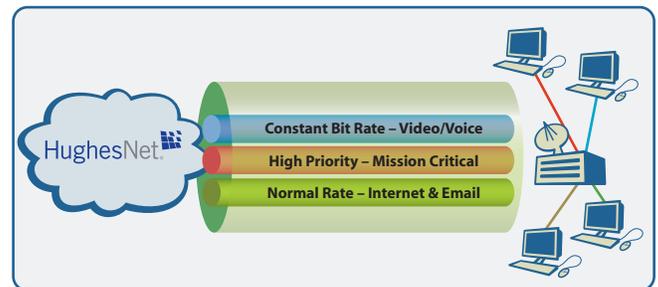

Bandwidth-on-Demand

Class of Service (CoS)

HughesNet provides multilevel prioritization so that your business applications are prioritized for the best performance possible, end-to-end, across the network.

HughesNet offers up to three levels of application priority.

- **Video and Voice applications**—HughesNet supports a CBR setting when jitter and dropped packets cannot be tolerated.
- **Mission-critical applications** are prioritized to ensure that they get through all the time, no matter what other traffic is present.
- **Internet access**—Typical Web surfing and Internet email can run at the normal priority, bandwidth-efficient setting.

Class of Service (CoS)

Private Network Plans

HughesNet Private Networks provide you the utmost in flexibility. You choose a service plan on a per-site basis, depending on the data needs of that site. Plans are designated by upstream speed and can either be provisioned as burstable or dedicated bandwidth. Burstable plans are ideal for branch locations where headquarters typically require dedicated bandwidth to support more traffic volume. All plans can receive downstream up to 8 Mbps.

With speeds up to 2 Mbps upstream and 8 Mbps downstream, your options are virtually unlimited. Be it transaction processing, SCADA, Internet, intranet, video, voice, or all of the above—you can have the plan to support it!

As your business grows, HughesNet can grow with you. Need more bandwidth? Just upgrade your plan. It's as simple as that.

Overlay Plans

Business Internet Service

Your branch locations may need access to the Internet, but you don't want the Internet traffic to clog up your private network. Hughes can provide separate access to the Internet in addition to the core private network service plans. No extra equipment is required. See sample diagram.

Now it is easy to add Business Internet (BI Plans) to any site that needs it without impacting your core private network. You size your corporate network accordingly; Hughes handles your Internet traffic. This improves performance and reduces your costs.

On-demand Constant Bit Rate Plans

Hughes has developed on-demand Constant Bit Rate (CBR) plans to support high-quality voice and video applications such as security video and telepresence applications. You pay only for the bandwidth where and when you need it!

The CBR plans deliver on-demand connection set to best meet your business requirements.

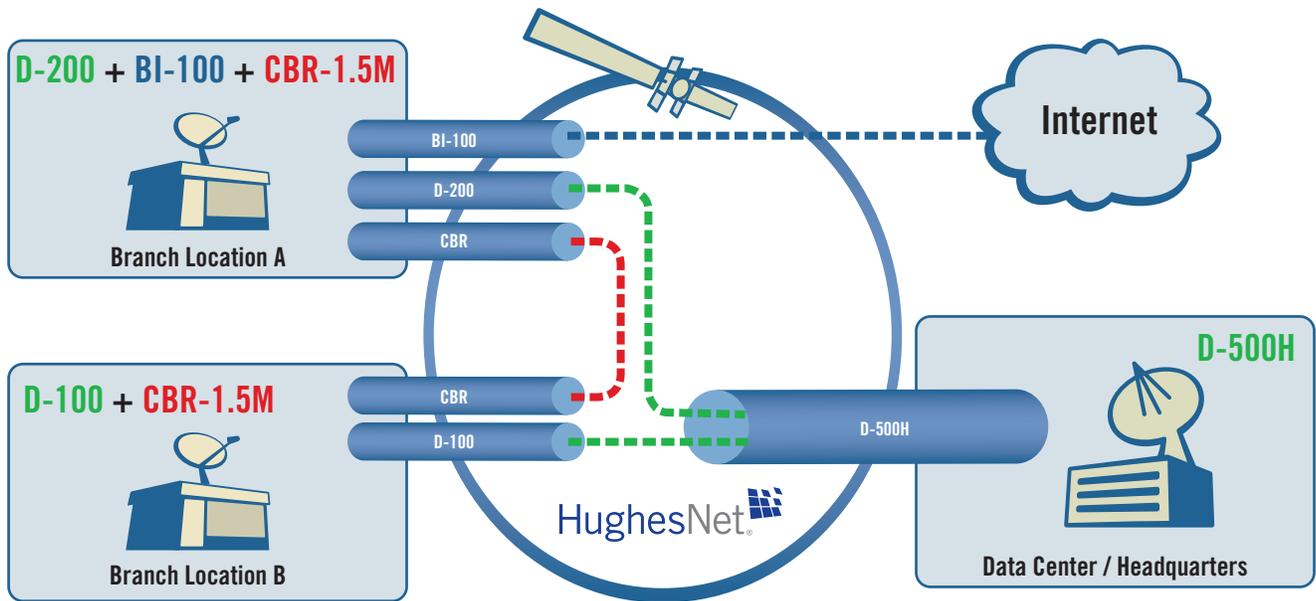

Just like the Business Internet service, on-demand Constant Bit Rate (CBR) plans overlay the existing core Private Network and add additional bandwidth on demand only for the time you need it—all on the same equipment that is already there.

Hughes' innovative approach to taking standard plans and customizing a solution for your business provides the flexibility you need to future-proof your network. HughesNet grows as your business grows.

PRIVATE NETWORK SERVICE PLANS			
	Plan	Upstream	Downstream
Burstable Plans (Ideal for branch locations)	D-50	64 kbps	Up to 8 Mbps
	D-100	128 kbps	
	D-200	256 kbps	
	D-300	512 kbps	
	D-400	1024 kbps	
Dedicated Plans (Ideal for head-quarters)	D-100H	128 kbps	Up to 8 Mbps
	D-200H	256 kbps	
	D-300H	512 kbps	
	D-400H	1024 kbps	
	D-500H	2048 kbps	
OVERLAY PLANS			
	Plan	Upstream	Downstream
Business Internet Access	BI-50*	128 kbps	1 Mbps
	BI-100	128 kbps	1 Mbps
	BI-200	200 kbps	1.2 Mbps
	BI-300	250 kbps	1.6 Mbps
	BI-400	300 kbps	2 Mbps
	BI-500	512 kbps	3 Mbps
	BI-600	1 Mbps	3 Mbps
	BI-700	1 Mbps	5 Mbps
On-demand Constant Bit Rate	Speeds	64 kbps up to 1.984 Mbps	

*Low volume plan

Service Plan Example Network

D Plan with Overlay Internet Access and Direct Connect Plan

In the above example, the following concurrent applications are supported through the network:

Branch Location A —

- Internet access at 128 kbps/1 Mbps (upstream/downstream)
- Private Network burstable connection to the Data Center; 256 kbps (upstream), up to 8 Mbps receive (downstream)
- VoIP/video connection to Branch Location B at 1.5 Mbps

Branch Location B —

- Private Network burstable connection to the Data Center; 256 kbps (upstream), up to 8 Mbps (downstream)
- VoIP/video connection to Branch Location A at 1.5 Mbps

Whether your business is large or small, whether you want to support data, voice, or high-definition video, HughesNet has you covered. HughesNet Private Networks provide broadband connectivity that is secure, reliable, and cost-effective anywhere you do business. HughesNet Private Networks, enabled by SPACEWAY® 3, will meet your application needs today and into tomorrow. Let Hughes manage your network so you can manage your business.

For more information, contact Hughes at 1-877-337-3880 or visit business.hughesnet.com.

Emergency Services

Emergency Business Internet Service

HUGHES delivers emergency business Internet solutions to businesses impacted by catastrophic disasters.

[▼ read more](#)

Do you need immediate network connectivity for your business? Get your mission-critical applications back online with HughesNet® Emergency Business Internet service! Hughes has you covered!

Hughes offers a rapid response program to provide emergency network connectivity to businesses impacted by catastrophic disasters. Our ordering process is simple. You'll get expedited installation, so your Internet access is up and running quickly. To give your business the flexibility it needs, HughesNet Emergency Business Internet is offered as a two month service commitment which then converts to a month-to-month service.

Emergency Business Internet service may be installed and activated within 1-3 days of your order, assuming the HughesNet installer is granted immediate site access and electricity is available.

With download speeds up to 5.0 Mbps¹ and upload speeds up to 1 Mbps¹, this service is perfect for getting your mission-critical applications back online—fast!

Key Benefits

How Does It Work?

- Immediate response- professional installation typically in 1-3 days
- Business continuity for your operations
- Secure broadband connectivity
- Flexible term commitment (month-to-month after initial 2-month commitment)

- 24/7 live technical support
- On-site Maintenance (next business day or same day)

¹ Stated speeds not guaranteed. Actual upload speed will likely be lower than speed indicated during peak hours. Download speeds may be temporarily slowed in cases when system usage exceeds the download threshold for an extended period of time. See the HughesNet Fair Access Policy for more information at legal.hughesnet.com.

Benefits

How Does It Work?

Each business location must be in the contiguous U.S. and have a clear view of the southern sky. A HughesNet certified installer will connect the satellite modem to your LAN to insure you have broadband connectivity. The satellite modem will link to a satellite dish (antenna) that's typically mounted on the roof of your commercial building.

Once the installer has verified the broadband connection, a 2-port (dual port) WAN router (customer supplied) will be required to facilitate the fail-over/backup to satellite when the landline connection fails. The router will also automatically return to your primary landline connection once it is restored. Your business is now protected, and you no longer have to rely only on your landline provider to keep your business online.

The world's leading provider of broadband satellite services, products, and network solutions.

Hughes Network Systems, LLC (HUGHES) is the global leader in providing broadband satellite networks, services, and products for large enterprises, service providers, governments, small businesses, and consumers. HughesNet® encompasses all broadband solutions and managed services from Hughes, bridging the best of satellite and terrestrial technologies.

Hughes owns and operates service businesses in the US, Europe, India, and Brazil, delivering continent-wide HughesNet broadband satellite connectivity along with an ever growing range of applications. Major enterprise customers include many Fortune 1,000 companies in virtually every vertical sector. HughesNet consumer/SMB subscribers now number over 500,000, making Hughes the largest provider of high-speed satellite Internet access in the U.S.

Hughes operates the Ka-band SPACEWAY® 3 satellite, the first communications satellite with on-board switching and routing and numerous other technology advances, which has the highest traffic carrying capacity of any commercial satellite in operation. Hughes offers the highest satellite speeds and service packages available to the consumer and SMB markets.

In the rest of the world, Hughes supplies a growing family of authorized service providers, government organizations, and businesses with advanced broadband systems and terminals. Hughes designed and manufactured products include satellite Network Operations Centers (NOCs) and gateways; two-way broadband satellite routers; mobile satellite handhelds and high-speed IP data terminals; and broadband wireless systems.

Hughes has manufactured and shipped more than 2.2 million terminals to customers in over 100 countries, and has consistently maintained a global market share of over 50 percent.

Headquartered outside Washington, DC, in Germantown, Maryland, USA, Hughes maintains sales and support offices worldwide. Hughes is a wholly owned subsidiary of Hughes Communications, Inc. (NASDAQ:HUGH).

Customer Support and Service

Hughes offers complete turnkey solutions, including program management, installation, training, maintenance and support—for professional and rapid deployment anywhere, worldwide. At our Network Operations Centers, experienced engineers monitor customer networks 24 hours a day, 7 days a week, 365 days a year. And this is backed by an extensive field operations organization that provides reliable, responsive service to all our customers.

Shared hubs that give businesses more options

Besides supplying dedicated networks to customers and service providers worldwide, Hughes owns and operates a global base of HughesNet shared hub services throughout the United States, Brazil, Europe, and India. Customers of HughesNet shared hub services can realize the many benefits of broadband by satellite—without having to build and operate their own dedicated hubs.

Quality Policy

The Quality Policy of Hughes is:

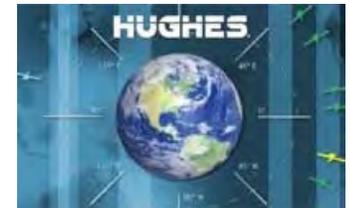

- To set the standard for excellence in our industry
- Earn the respect of our customers and suppliers throughout the world
- Satisfy customers by meeting their needs and exceeding their expectations
- Deliver error-free, competitive products on time and services second to none
- Ensure that every job is done right the first time, every time

Getting Connected

Getting Connected with Satellite Internet Service

The importance of high-speed Internet service for business can't be overstated. It boosts efficiency and profitability. Allows for more responsive customer service. Opens up new revenue possibilities. But, if cable Internet or DSL is not available, just getting affordable broadband network can seem out of reach. Leased-line T1 can be expensive, and high operational costs don't exactly contribute to your success. If you have more than one location, it gets even more challenging trying to find a simple, affordable, reliable way to connect your entire business.

How can HughesNet Business Internet help?

HughesNet® Business Internet gives you the high-speed, always-on broadband connection you need to get the job done—wherever you do business. It doesn't matter if you're just outside a big city, in a small town, or out in even the most rural area. All you need is a view of the southern sky, and you can put broadband to work for your business!

Or, choose [HughesNet Private Networks](#) for a secure broadband Internet connection for all of your locations—no matter where they are. You get the high-speed and performance, secure private networking you need, at a price that's affordable for your business.

HughesNet Business Internet and Private Networks bring you all these benefits:

- Broadband connectivity for all your locations
- Simple and fast deployment
- A suite of service plans to meet your business needs, whether you have one site or many
- 24/7 customer care
- A broadband network solution that can grow as your business does
- And, of course, satellite broadband won't tie up your phone line!

For more information about HughesNet Business Internet, HughesNet Private Networks, and other broadband satellite solutions that can help you meet your challenges, check out our list of resources on the right.

[Solve Your Challenges](#)[Select Your Industry](#)[Get Broadband Services](#)[About Hughes](#)[Contact Us](#)[Home](#) » [Solve Your Challenges](#) » [Creating a Private Network](#)

Creating a Private Network

Creating a Private Network

If your business has multiple locations, fast, easy collaboration among all your sites is vital to your success. So is being able to add new locations as your company grows. But, how can you connect all your sites simply and affordably? Cable and DSL don't reach everywhere. T1 can be expensive, and you may need multiple vendors. That means more time spent managing your network, which drains time and energy away from what's really important: continuing to grow your business. You need a reliable broadband satellite network solution for your private network.

How can HughesNet help?

[Choose a Virtual Private Network from Hughes](#)

We have the broadband solutions you need to fully connect your business. Our HughesNet® Business Internet with VPN gives you a simple, affordable way to fill in the gaps in your coverage, connecting locations you weren't able to reach before, with fast, secure access via the Internet to your existing network.

[Or Choose a Private Network Solution](#)

HughesNet Private Networks offers a single turnkey solution that connects all your locations, wherever they are, with a cost-effective, high-performance secure private network.

HughesNet broadband solutions deliver all these advantages:

- Nationwide broadband coverage, even in remote locations not served by DSL or cable Internet
- Speeds as fast as 8 Mbps
- End-to-end security for your data
- Business-class service, equipment, installation, and support
- Instant customer care any time, day or night

For more information about HughesNet Business Internet with VPN, HughesNet Private Networks, and other broadband satellite business solutions that can help you meet your challenges, check out our list of resources on the right.

[Solve Your Challenges](#)[Select Your Industry](#)[Get Broadband Services](#)[About Hughes](#)[Contact Us](#)[Home](#) » [Select Your Industry](#) » [Agriculture Solutions](#)

Agriculture Solutions

Satellite Broadband Rural Internet

Even in the most remote areas in the country, farmers and other agricultural businesses can enjoy rural high-speed Internet. Internet that delivers instant access to critical online resources.

Fast, easy Internet access brings so many benefits to your farm. With rural high-speed Internet, you can order seeds and other supplies online. Get fast-breaking weather information. Access USDA sites. Join social networks. Connect with customers.

Just getting broadband, though, can be a challenge. DSL and cable Internet aren't available everywhere, and leased-line T1 can be way too expensive. Dial up doesn't give you the fast access you need, and with limited time to spend online, you can't afford to wait around for busy signals and slow downloads.

With HughesNet, you get rural high-speed Internet with always-on connectivity for your farm—up to 50 times faster than dial up Internet service. And it doesn't matter where you're located. All you need is a view of the southern sky, and you can enjoy the same advanced, enterprise-class satellite technology that powers Fortune 500 companies, with a choice of service plans to meet your specific high-speed business Internet needs.

HughesNet takes the challenge out of deploying rural high-speed Internet access to multiple sites, as well. No matter how widespread or rural your agricultural network may be, our satellite solution can connect all your locations with a single platform. So it's easy to manage. Choose HughesNet, and you'll get the ideal solution for putting satellite broadband to work for your business.

Utilities Broadband Solutions

Rural Internet Solutions for Utilities Providers

HughesNet delivers the reliable, secure broadband communications your utility needs to help you meet compliance standards—all with the ease of a managed solution.

▼ read more

Nothing is more important to national security than protecting the country's infrastructure. At the same time, the environment is also a crucial concern, and utilities are looking for ways to improve efficiency, decrease greenhouse gas emissions and reduce reliance on foreign oil. Utilities need smart solutions, including network security, broadband backup and broadband connectivity to create the smart grids that will power the 21st century.

The North American Electric Reliability Corporation (NERC) has mandated a set of requirements to ensure the security of data to and from utility generation stations and substations. This has left many utilities with the need to upgrade to more secure and reliable broadband solutions. HughesNet Managed Network Services turns this necessity from a challenge to an opportunity.

Our fully managed broadband offering is IP open standards based and uses best-of-breed terrestrial and satellite technology to deliver the most efficient and cost-effective solution. Your utility gets uniform, secure and highly reliable broadband service at each location, with round-the-clock network management.

Hughes Utilities Solutions not only helps you meet current compliance requirements. It's highly scalable, so you're ready for the future as well, as smart grid technology continues to evolve.

Six ways HughesNet broadband solutions gives you the advantage:

Gas Station Network Solutions

Gas Station Broadband Connecting Solutions

Your customers just want to gas up, grab some coffee, and go. They don't think about the network that keeps operations running behind the scenes—from credit and debit card authorizations, to tank-level monitoring, to inventory management. But, you know how crucial reliable network connectivity is for your business. If you have multiple locations, you also know how hard it can be to find a single solution that connects all your sites.

At HUGHES[®], we understand small business networking challenges, and we have the solutions to help you meet them. In fact, major corporations such as BP, Exxon, and Shell rely on HughesNet broadband services to securely and reliably connect their branch gas stations and convenience stores to their corporate headquarters and transaction processors, helping them speed millions of customers on their way.

We bring this depth of expertise to creating affordable, effective small business networking solutions for your convenience store or gas station business, whether you have one location or many.

Speed Up Transactions

The faster the service, the happier your customers. Keep them coming back by increasing speed and reliability for all of your cashless transactions including credit, debit and gift cards. Improve your bottom line by reducing transaction processing fees and replacing multiple dial-up lines.

Secure Company and Customer Data

Safeguarding confidential information is crucial to your business's success. Get small business networking that meets stringent PCI security guidelines to protect your payment transactions, as well as state-of-the-art broadband backup for all your other critical data.

Manage Inventory Loss

Reduce shrinkage through innovative security applications like video surveillance that can run over HughesNet, improving store operational efficiency.

Increase Sales

Faster transactions and better information sharing between branch locations and headquarters help increase customer satisfaction and drive sales.

Guard Against Disaster with HughesNet Broadband Backup

Real-Time Tank Monitoring

If you're out of gas, you're out of business. With your HughesNet broadband connection, you can optimize fuel inventories across all your stores using real-time fuel monitoring applications.

The last thing you want to do is turn customers away. Keep your gas stations and convenience stores up and running, even when disaster strikes and your landline goes down—with HughesNet Broadband Backup. This solution enables you to automatically stay connected via satellite and protects you from costly network outages.

Restaurant Broadband Solutions

Restaurant Business Broadband Solutions

At HUGHES, we've helped some of the largest restaurant operators—companies like Captain D's, Pizza Hut and Denny's—to achieve their goals. We can do the same for you through our business broadband solutions.

Your restaurant faces a variety of challenges. How to grow market share. The need to continually improve customer service. Finding ways to upgrade performance. At HUGHES, we've helped some of the largest restaurant operators to achieve their goals. We can do the same for you, with a broadband solution that's tailored for the size of your business.

HughesNet® gives you a reliable, affordable network connectivity that can support all your current applications like electronic payments, back office, and e-mail. If you have multiple sites, it can connect them all with a single solution, no matter where they are. And, HughesNet is flexible, enabling you to easily add new applications, as well as new locations, so your network can keep pace with your growing business.

Speed Up Transactions with Broadband Connectivity

With HughesNet business broadband, you will keep customers coming back by increasing speed and reliability for all of your cashless transactions including credit, debit and gift cards. Enjoy faster table turnovers and counter checkout. Improve your bottom line by reducing transaction processing fees and replacing multiple dial-up

Monitor Restaurant Inventory with HughesNet Broadband Connectivity

Optimize restaurant pricing by monitoring your inventory in real-time through RFID and other innovative technologies at the store level with your HughesNet broadband connection.

Increase Sales with High-Speed Networking

Faster transactions and better information sharing between branch locations and headquarters help improve customer satisfaction and drive sales.

Guard Against Disaster with Broadband Backup

The last thing you want is to turn customers away. Make sure your restaurants stay open for business, even when disaster strikes and your landline goes down—with HughesNet Broadband Backup. This solution enables you to automatically stay connected via satellite and protects you from costly network outages.

Our Customers

HughesNet[®] Managed Network Services frees enterprises and government agencies to focus on running their operations while Hughes manages their networks. Our team can offer the most comprehensive range of network design, program management, implementation, and operational capabilities to meet the most complex and demanding communications requirements.

Retail

Blockbuster

Blockbuster is the world's leading renter of videos, DVDs and video games, with thousands of retail locations across the U.S. Blockbuster uses Hughes' Optimized VPN services to enable key applications like high-speed, always-on credit card verification, store-polling, and browser-based business applications.

TJX Companies / TJ Maxx

TJX Companies Inc., the world's largest apparel and home fashion off-price retailer, employs a Hughes' High-Availability VPN service to deliver the highest availability to their retail outlets across the US.

Restaurants

Denny's

Menu updating is just one of the challenges a Denny's franchise owner eliminated when using Hughes' Optimized VPN service. Through the Denny's program, franchise owners can benefit from improved communications, operational efficiencies and transaction speeds.

Jack In The Box

Jack In The Box is a leading quick-service restaurant in the U.S. that serves burgers, fries, soft drinks, salads and tacos, as well as breakfast items. Jack In The Box relies on Hughes' Optimized VPN service to quickly and securely process their customers' POS/credit card transactions at many of their company owned and franchise locations.

Retail Petroleum

BP

BP Products uses the Hughes' Optimized VPN service to get millions of customers on their way fast at over tens of thousands of stations throughout the U.S. and Europe. With Hughes, BP retailers can not only run standard POS/credit card transactions, but also support back-office applications like e-mail, inventory management, and tank-level monitoring, and add new revenue-generating applications like video to the pump advertising.

ExxonMobil

ExxonMobil, the largest integrated oil company, uses Hughes' Optimized VPN service at tens of thousands of its gas stations throughout North America. With Hughes, ExxonMobil can provide their customers streamlined POS/credit card transactions at the pump and leverage the network for back-office applications like e-mail, inventory management, and tank-level monitoring.

Hospitality

Wyndham

Wyndham Hotels and Resorts is one of the world's largest hospitality companies, with properties in over one hundred countries. Wyndham recently updated their network with Hughes' Optimized VPN service, ensuring core applications run smoothly and provide the flexibility to scale future operations. Wyndham was so pleased with the results, they presented Hughes with an Outstanding Service Award in appreciation.

Best Western

Best Western has thousands of independently owned and operated hotels around the globe, making it the world's largest hotel brand by number of rooms. In the U.S., Best Western relies on Hughes to provide secure managed broadband network connectivity to each of its hotel properties using Hughes' Optimized VPN service. Best Western uses the service for hotel reservations and other back office applications in order to deliver the utmost in customer service.

Grocery

Safeway

One of North America's largest food retailers, Safeway relies on Hughes' Digital Signage offering to provide live and on-demand video training to its store employees. With the solution, Safeway can ensure employees have taken required training for improved operational efficiency and customer satisfaction.

Smart & Final

Smart & Final is a non-membership grocery food distributor and food service supplier that provides product in bulk size quantities to customers. Smart & Final has deployed the Hughes' High-Availability service to help increase productivity, streamline operations and deliver ultra-high-reliability for their mission-critical applications.

Oil & Gas Exploration

M/D Totco

M/D Totco, the 80-year-old instrumentation division of National Oilwell Varco, turned to Hughes when it needed to update their existing network. The Hughes broadband network receives real-time data at any given rig site, and the information can then be viewed, printed, and distributed in

order to examine and adjust key processes, all with little to no oversight on M/D Totco's part.

Utilities

American Electric Power

American Electric Power (AEP) is one of the largest power generators and distributors in the U.S., serving millions of customers throughout middle America. AEP owns the nation's largest electricity transmission system and uses Hughes' satellite technology to monitor a number of remote substations for Supervisory Control And Data Acquisition (SCADA) communications.

Spectra Energy Corporation

One of North America's leading providers of natural gas infrastructure, Spectra Energy has thousands of miles of pipeline to monitor to ensure efficient operation and safety. Spectra Energy uses Hughes broadband satellite technology to monitor a number of their remote pipelines for Supervisory Control And Data Acquisition (SCADA) communications.

Financial

AIG (American General Finance)

As one of the country's premier financial services companies, American General Finance relies on Hughes' Optimized VPN for reliable, fast back-office communications between its headquarters and thousands of financial branch offices.

Heartland Payment Systems

Heartland Payment Systems provides credit card, debit card, and payroll processing services to hundreds of thousands of small and mid-sized merchants in the U.S. and Canada, including retailers, hotels, and restaurants. Heartland relies on Hughes' Optimized VPN service to provide secure communications to their payment processing center for customers that do not have access to cost-effective wireline broadband connectivity.

Media/Entertainment

USA Today

USA Today, the number two daily newspaper in the U.S., partnered with Hughes to digitally deliver the content for multiple newspaper editions via broadband satellite to each of their distributed printer plants throughout the U.S. Using Hughes' Content Delivery service, USA can quickly and cost-effectively deliver the digital content for easy insertion of local advertising and content specific to the region.

National CineMedia

National CineMedia, the sales and marketing arm for the three largest theater companies in the U.S., delivers digital content to theaters throughout the U.S. via broadband satellite using Hughes' Content Delivery service. This digital content includes pre-show advertising, and High Definition broadcasts of both live and pre-recorded special events such as concerts, sporting events, and business conferences and seminars.

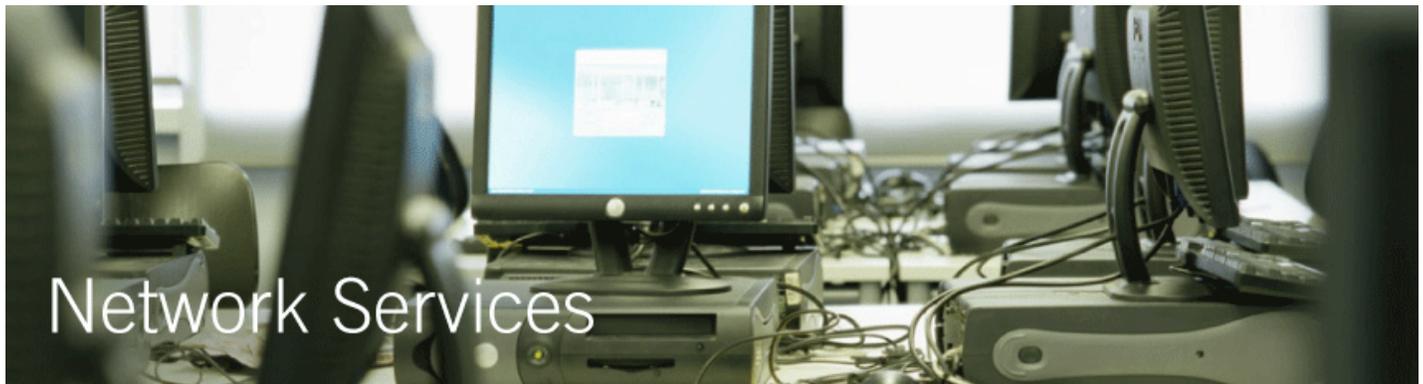

Automotive

Automotive Broadcasting Network

The Automotive Broadcasting Network (ABN), a private auto retailing television network, uses Hughes' Digital Media service to distribute video content to automotive dealerships across the U.S. Hughes takes the network management burden off ABN, enabling the company to focus on its core business.

General Motors Corp.

The world's largest automaker has to train auto technicians, sales people and staff at thousands of locations with the most up-to-date information possible. General Motors partnered with Helius—A Hughes Company, to deploy a state-of-the-art corporate training solution using Helius-developed technology to provide training videos both live and on-demand.

The performance you need. All from one place.

Our vast array of managed Network Services keeps you connected, up-to-speed, and in control. Whatever your business or technological objectives, Hughes offers a turnkey solution that's right for you.

Broadband Connectivity

Leverage wireline, wireless and satellite technologies to deliver secure, reliable broadband connectivity to all remote locations.

Broadband Connectivity

One-Stop Managed Networking for All Your Branch Locations

To keep your business thriving, you need secure, affordable broadband connectivity at all your branch sites, regardless of their location. T1 lines can be prohibitively expensive, and DSL and cable are not available everywhere. You may have considered a mix of broadband services, but who has the time and budget to manage multiple network providers?

The ideal solution is HughesNet® Optimized VPN, a managed network service that leverages both wireline and wireless technologies to deliver secure and reliable broadband connectivity optimized for each of your locations.

[▼ read more](#)

HughesNet Optimized VPN delivers the most cost-effective service to each location—resulting in improved application performance, higher employee productivity and greater customer satisfaction.

Wherever your location, HughesNet Optimized VPN keeps you connected

- The optimal wireline or wireless technology for each location
- Chose DSL, cable, 3G/wireless, T1 or broadband satellite

- Nationwide broadband coverage
- Fully managed service from a single provider
- Secure, end-to-end network, designed from standards-based technologies
- HUGHES Customer Gateway portal to track network activity via a single, Web-based utility

Emergency Services

Resilient Emergency Communications—Ready at a Moment's Notice

There's no telling when an emergency situation might occur—or how severely mission-critical applications may be affected. As recent natural and man-made disasters have demonstrated, businesses, government agencies, relief organizations, and small businesses must sustain vital communications, even in the event of a large-scale disaster.

[▼ read more](#)

But how successfully organizations can recover connectivity after a disaster depends largely on how well they prepare in advance. Enter Hughes Emergency Solutions—a suite of tools built to handle virtually every business and government emergency communications need.

How Hughes Emergency Solutions Work

- Pre-disaster planning and setup
- Permanent networks with built-in emergency preparedness
- Temporary post-event infrastructure

Who Can Benefit from Hughes Emergency Solutions

- Large, distributed enterprises with network continuity requirements or sites in disaster-prone areas
- Federal, state, and local government agencies
- Rescue and relief organizations
- Small and medium businesses

[Network Restoral](#)

[Built-in Preparedness](#)

[Rapid Post-Event Response](#)

Hughes Emergency Network Restoral (ENR)

is a satellite-based backup solution that blends pre-disaster planning and setup with rapid post-event deployment. It offers a completely diverse, VPN backup service for locations connected by wide area networks (WANs) such as frame relay, MPLS, or IP VPNs.

Hughes ENR includes a planning phase that covers every aspect of business or government operations. Hughes designs, pilots, configures, and integrates a private satellite network with the WAN. And by deferring deployment until disaster actually strikes, Hughes ENR provides the flexibility to move resources as and where needed.

Hughes ENR ensures essential business continuity:

- Broadband support of mission-critical applications
- Secure IP connections integrated into customer VPN
- National coverage in the U.S. and parts of Canada

Once the terrestrial service is restored, Hughes ENR service can be converted to a Hughes Access Continuity or High Availability VPN service to provide permanent backup connectivity to affected locations.

Retail

Delivering A Competitive Edge

Hughes Enterprise Solutions enable better network performance, lower operational costs, and happier customers—all from a leading managed service company. Hughes has more than 20 years experience in retail with tens of thousands of retail sites deployed. HUGHES has the privilege of servicing leading retailers like TJ Maxx, Blockbuster and CVS.

Discover how Hughes can deliver the competitive edge to your retail network by providing a cost-effective managed solution that provides:

- Faster customer transaction times
- A secure, PCI compliant network architecture
- Near 100% branch network uptime
- A single invoice to simplify operations
- Digital signage for targeted customer communications
- Effective employee training

Make sure your store network is running smoothly, your customers are happy, and your employees are satisfied, and all with a fully managed solution from Hughes.

A Suite of Services

Hughes offers a suite of managed network services that can accelerate your retail network. For instance:

- HughesNet High-Availability VPN saves as much as 30 percent (or more) over competitor T1 solutions, while achieving 99.99% broadband availability
- HughesNet Optimized VPN delivers the most appropriate broadband technology to each store whether the requirement is based on bandwidth, price, security, or performance
- HughesNet Access Continuity keeps your stores online even when your primary network fails
- HughesNet Digital Media solutions allow you to communicate with your customers and employees more efficiently and cost effectively

Restaurants

A Faster, Better Network... Coming Right Up!

In the restaurant business, whether your business is casual dining, quick service, or a more formal dining experience, a happy customer is a repeat customer. Running a highly efficient operation can lead to faster table turns, increased transactions and faster checkouts at the counter. Keep them moving, and you'll keep them coming back for more.

A fully managed network from Hughes can support all your applications, from electronic payments, to digital menu boards, to WiFi guest access, all while providing a clear, seamless growth path to new application delivery. Speaking of applications, Hughes offers effective, low-cost on-line training solutions to help your employees learn food safety, how to operate the POS and proper cleaning—an invaluable tool in reducing employee churn. Speed, security, efficiency, and reliability—the secret ingredients to customer satisfaction.

Move your company in the right direction with a fully managed network service from Hughes.

A Network That Really Cooks

- Faster customer transaction times
- Secure transactions—PCI compliance
- Superior network availability—near 100 percent uptime
- Digital Menu boards for efficient restaurant operations
- Effective employee training reduces churn

A Suite of Services

Hughes offers a suite of managed network services that can really make your restaurant network cook and your customers coming back for more. For instance:

- HughesNet High-Availability VPN saves as much as 30 percent (or more) over competitor T1 solutions, while achieving 99.99% broadband availability
- HughesNet Optimized VPN delivers the most appropriate broadband technology to each store whether the requirement is based on bandwidth, price, security, or performance
- HughesNet Access Continuity keeps your stores online even when your primary network fails
- HughesNet Digital Media solutions allow you to promote your loyalty program and food specials
- HughesNet Franchise Network services ensure both company owned and franchisee network operations

Retail Petroleum

A More Convenient Convenience Store

Your customers want fast, easy, reliable service. You want secure transactions and a dependable way to connect your branch locations with corporate headquarters. Major companies like BP Retail, Exxon and Shell rely on Hughes to provide fully managed solutions to these challenges. Shouldn't you?

When customers are in a rush, the last thing they want to do is fumble for cash or be forced to pay inside when filling up at the pump. They want cashless transactions, and they want them executed quickly and securely. As a store owner, you need to drive loyalty programs and increase your profits by selling more car washes, oil changes, ATM services and lottery tickets. To earn your customer's loyalty, you need to deliver these services efficiently at a competitive price.

Fill up with HughesNet Managed Services, and keep your customers coming back for more.

Increase Loyalty. Increase Revenue.

- Faster transactions improve efficiency and the customer experience
- Real-time tank monitoring helps optimize fuel inventory over multiple locations
- PCI-compliant network architecture ensures your customer's data is secure—including rogue Wi-Fi scanning
- Highly targeted video advertising at the pump helps to increase in-store sales
- On-line employee training on how to properly sell products such as cigarettes

A Suite of Services

Hughes offers a suite of managed network services that can pump up your sales over your retail petroleum network and earn the loyalty of your customers. For instance:

- HughesNet Franchise Network services ensure both company owned and franchisee network operations provide a uniform customer experience
- HughesNet Digital Media solutions allow you to promote your loyalty programs and food specials as well as to train employees to help reduce churn
- HughesNet High-Availability VPN saves as much as 30 percent (or more) over competitor T1 solutions, while achieving 99.99% broadband availability
- HughesNet Optimized VPN delivers the most appropriate broadband technology to each store whether the requirement is based on bandwidth, price, security, or performance

Hospitality

Give Your Guests More

The hospitality business has always hinged on customer satisfaction, and today your customers expect more than ever before. Providing convenient and effective services is one of the keys to driving occupancy rates and improving your bottom line.

A fully managed Hughes network solution will help you do just that by turning communications technology to your advantage and enticing your guests to keep coming back.

Whether you're running a hotel, a convention center, or a resort destination, you can rely on HUGHES to deliver the information services your customers expect.

A fully managed network solution from Hughes is the first step toward creating an unforgettable experience for your guests and customers.

Five Star Network Services

- Fast online reservations help build brand image and operational efficiency
- Internet services let guests work at your location, and attract corporate conferences
- Wi-Fi access allows customers to stay in touch and feel at home
- Digital signage in hotel lobbies and convention centers inform your customers
- Increase efficiency via online employee training

Oil & Gas Exploration

Pump Up Your Network

In today's highly sophisticated oil and gas exploration industries, the importance of network reliability cannot be overstated. Modern rigs function as much as complex data collection hubs as they do drilling devices. Pipelines need to be monitored 24/7 to ensure environmental safety and ensure there are not service disruptions.

With a constant stream of vital information—from weight on drill bit, to pump pressure, to rate of penetration—to be collected, relayed, and analyzed, a fast, secure, and accurate network is the only way to manage costs and keep the oil and gas flowing.

Now, thanks to HughesNet® Optimized VPN, you can have the perfect IP enabled backbone for your pipeline or rig, leveraging either wireline or wireless technologies to deliver secure and reliable broadband connectivity so that you can monitor all your locations—no matter where they are. With real-time data delivery for key applications like SCADA, our fully managed broadband solution can help you effortlessly monitor your entire network.

Fast, Reliable, and Secure

- Send and retrieve data from geographically remote drill sites or pipelines
- Move data quickly regardless of originating location
- Superior speed and security
- Reliable, flexible, and fully customizable
- Minimal oversight required
- Fully managed network service from a single provider
- Support mission-critical VoIP communications
- Ideal for SCADA applications to remote areas

HughesNet delivers the reliable, secure broadband communications you'll need to help you explore for vital oil and gas reserves well in to the 21st century.

Utilities

Smarter Grids and Smart Metering for a Smarter Tomorrow

While the new Smart Grid and Smart Metering initiatives are positive for the country, they present a complex set of challenges if you're in charge of the network. From advanced metering infrastructure systems to substation monitoring and communications, you need to reliably monitor all your critical network assets, no matter where they are located.

Hughes Utility Solutions can help you comply with current government requirements and get you ready for the future. Our broadband solutions provide reliable and cost-effective communications to the substation and distribution systems you need to monitor. Whether backing up your primary wireline, supporting your M2M SCADA applications, or providing a backhaul for your AMI needs—Hughes has a solution.

Re-Energize Your Network

- Turnkey private networks help meet NERC-CIP requirements and provide maximum security
- Affordable high availability connectivity solutions provide near 100% uptime
- Easily monitor hard to reach infrastructure assets for key SCADA applications
- Private network backhaul communications to enable Advanced Metering Infrastructure (AMI)
- Improve maintenance crew efficiency through a rig mounted mobile broadband solution
- Keep remote crews connected even when out of range of satellite or radio coverage.

Automotive

Increase Efficiency and Rev Up Sales

These are tough times in the car business. Customers are looking for a little bit extra from the dealership. They expect a smooth experience from the show room to the service department.

In the extremely competitive world of auto sales, many of today's auto dealerships are providing creature comforts and amenities to entice customers in to their showrooms. Including ways to inform and entertain their customers as they wait for service or peruse the showroom. A number of dealers have turned to Hughes' Digital Media Solutions for digital signage in showrooms and in the service waiting areas. As well as a means to better train their technicians and sales associates.

Get the Competitive Edge

- Showroom signage informs customers as they look at vehicles
- Service department signage informs customers of new services as they wait
- Improves advertising retention
- Enables effective branding control and call-to-action messaging
- Provides dynamic training to technicians and sales personnel

In addition to the automotive uses of digital signage, Hughes' other managed network services, can help the automotive industry address cost, speed, and security issues in a fully integrated, highly efficient manner. For instance:

- HughesNet High-Availability VPN saves as much as 30 percent over competitors' solutions
- HughesNet Optimized VPN delivers the best, most cost-effective broadband technology to each dealership
- HughesNet Access Continuity keeps your dealers open even when your landline network fails

Make sure your dealerships are running smoothly, your customers are happy and your employees are satisfied, all with a fully managed solution from Hughes.

Rich Media Delivery

Today's technology has led to some truly amazing developments. It has also contributed to higher customer expectations—especially in the entertainment industry. Your customers and employees live in a world of high-impact, highly engaging rich media. To communicate effectively with them via high-quality video, your dynamic messaging must be first-rate yet cost-effective. HUGHES can help you deliver this content cost-effectively and error free.

Ranging from digital signage, to training and learning solutions, to corporate communications solutions, to digital cinema, HughesNet® Digital Media Services deliver high-impact digital media applications at the right price.

Inform, entertain and educate captive audience viewers with compelling screen displays that include video, news, and weather and entertainment information. Enable interactive distance learning, on-demand video and other web-based training options. Deliver rapidly changing benefits information and strengthen critical employee relations.

Improve your ability to communicate with media-savvy customers and employees, and you'll improve profitability as a result.

Benefits of Hughes' Content Delivery System

- Centralized, Web-based digital signage management system
- Dynamic content for multiple screens in multiple locations
- Easily insert local advertising Supports IP unicast and multicast
- Rapid delivery of constantly changing content with delivery confirmation
- Viewership status reports
- Less demand on human resources
- Eliminates need and expense of producing and shipping DVDs or films
- Lower employee costs for staff transactions

Hughes Helps Government Serve its Citizens

From emergency preparedness and continuity of operations, to telework and distance learning, whatever their applications, government agencies can count on Hughes to deliver the most advanced technologies and highest standard of communications solutions to support the many missions of government.

The Hughes Government Solutions Group has a strong history of supporting the broadband needs of U.S. federal, state, and local governments of every size and mission.

- Hughes is the world's leading provider of broadband satellite networks and services, with over 2.2 million systems shipped to customers in more than 100 countries.
- The company's core expertise ranges from design of advanced components, terminals, and broadband systems, to the development and turnkey operational management of complex communications networks.
- Owner and operator of SPACEWAY® 3, North America's highest-capacity commercial satellite and the first with onboard switching and routing, Hughes stands alone as both a leading broadband technology and systems supplier and fully integrated broadband service provider.

The Unique Needs of Government

The Hughes Government Solutions Group is dedicated to supplying a broad range of solutions to address unique government applications, including path-diverse communications that enable continuity of operations (COOP), for the critical times when citizens depend on their government to keep working during emergencies.

From distance learning solutions for training when and where it's needed, to telework connectivity for field offices and remote sites, to emergency communications solutions for emergency preparedness and response, Hughes has a track record of delivering high-performance network solutions to help

In addition, Hughes is helping to keep over 1,000 small rural towns and local governments across the U.S. connected with Hughes broadband satellite service. Available continent-wide, and offering a range of high-speed, affordable plans, Hughes is the ideal way for small government offices to access the Internet and their national agency networks, no matter where they're located.

Inter-Government Crisis Network (IGCN)

In times of crisis, reliable and resilient communications networks are essential for rapid sharing of critical information and coordinated decision-making among national, regional, and local agencies. The Hughes Inter-Government Crisis Network (IGCN) is a private "network of networks" that is instantly deployable and interoperable among any number of agencies and levels of government. Providing secure, alternate path communications and advanced private networking that doesn't touch the Internet, IGCN enables maximum preparedness and rapid response to any emergency—for a true "Plan-B" national emergency communications plan.

Easy and Convenient Purchasing

Hughes makes it easy to order through a variety of contract vehicles for all levels of government, including the GSA Schedule, GSA SATCOM II, GSANetworx, and contracts with a number of states across the country.

government agencies perform more efficiently and cost-effectively.
