Comments of Compusult Limited

Compusult Limited designs, manufactures, and supplies products for people with physical, vision, speech, and learning disabilities.

Please accept our support of the comments submitted by Jeffrey A. Dahlen, et al. We would like to reiterate the major points:

1. The FCC should consider the needs of people with speech and/or mobility impairments who use augmentative and alternative communication (AAC) devices and other assistive technology (AT) to speak and write. These individuals should have equal access to advanced communication devices.
2. A broad definition of third party devices used by persons with disabilities to achieve access should be applied in order to assure compatibility with AAC devices and other assistive technology.
3. The FCC should consider achievable technical standards by which AAC devices and other assistive technology would be able to connect to and control advanced communication devices.
4. Assistive technology experts, user groups, manufacturers, trade associations (such as the Assistive Technology Industry Association, ATIA) should be consulted as part of due diligence.

Respectfully submitted,

Paul Mitten, Vice-President
