

In the matter of FCC Petition for Rulemaking RM-11625, I hereby submit these comments in support of the petition:

1. The changes proposed by the ARRL will promote continued experimentation and advancement of technology in the amateur radio bands as stated in the FCC rules.
2. Band congestion will be alleviated by this change, making better use of existing spectrum.
3. The change will clarify what is apparently a gray area on the current rules and remove the read between the line judgments by some.
4. Allowing the proposed usage of this new digital technology in the Amateur bands will expand the market for this equipment hopefully in new amateur equipment, making it more affordable for all users of this equipment whether Amateur or Commercial.

Respectfully

Jody Cross, N7ERT
