WT 11-65: In the Matter of applications of AT&T Inc. and Deutsche Telekom AG for consent to assign or Transfer Control of licenses and Authorizations

Dear Chairman Genachowski and Commissioners:

I am writing in support of the proposed merger between T-Mobile and AT&T. We, at Glendale Healthy Kids, are committed to ensuring that children have access to health care and health education.

As chief executive officer of Glendale Healthy Kids, I know firsthand that parents and children need to have reliable resources to call their doctor, search health care options and increase their knowledge for healthy living. More than ever, people are turning to the Internet for answers to health questions. The most advanced mobile networks will give parents and children access to health information anywhere they need it. With this merger comes an extension of AT&T's 4G LTE service, which is the latest in the wireless industry.

The bottom line is that the proposed merger will mean better access to health care and educational opportunities for families in California. We hope that the FCC's review is done quickly. We encourage a prompt approval because I believe that this merger will improve our community, empower our residents, and transform our future.

Sincerely,

Camille Levee, Executive Director, Glendale Healthy Kids

WT 11-65: In the Matter of applications of AT&T Inc. and Deutsche Telekom AG for consent to assign or Transfer Control of licenses and Authorizations

Dear FCC Commissioners:

In my past years as a state representative in the Indiana House, I came to realize that many people and organizations would come to me for support. I looked carefully at their requests and determined in the end what was best for my constituents. I know you face much the same situation at the Federal Communications Commission.

I am writing you today on behalf of the Indiana Manufacturers Association to ask for your support of the AT&T merger with T-Mobile.

Unfortunately, economic recovery in light of the Great Recession is taking longer than many expected. Manufacturers and other businesses are careful to weigh the costs of any investments, whether it is in equipment, real estate or in creating new jobs. One of the considerations they face is what technology is currently available and how it will change their business or operations.

This merger has the promise of significantly improving the communications infrastructure of our country. AT&T has said that the merger result will bring next-generation wireless service to upwards of 97 percent of the country's population. This is a huge investment in infrastructure, and it is not contingent upon any public funding.

By offering people and businesses throughout the country the opportunity to shop, work, study and socialize online from wherever they are, this technology will help to spur the economy. It will provide the means to encourage manufacturers and other businesses to expand and create new jobs. As you know, this creates a cycle that feeds upon itself to the benefit of everyone.

That is why we as an organization representing manufacturers around Indiana support this acquisition. We believe it will be good for the economy and for job growth. We urge you to endorse this deal.

Sincerely,

Patrick J. Kiely
President

RE: In the Matter of applications of AT&T Inc. and Deutsche Telekom AG for consent to assign or Transfer Control of licenses and Authorizations; (WT Proceeding—No. 11-65).

Dear Commissioners:

I am the president and CEO of Community Health Works, which has the mission of regional integration of "whole-person healthcare" for the uninsured in middle Georgia. Through my years of experience in this field, I have come to appreciate how important it is to keep health care costs low while still providing the level of care that is needed. In many cases, that means engaging specialists, which is inconvenient for patients who are not in urban areas and may not even be able to afford the transportation to get there.

We can overcome this problem by connecting specialists with general practitioners in our area via video, voice and data connections. Not only can physicians and other health care professionals consult, but they can share test results and even video appointments with patients. The proposed merger between AT&T and T-Mobile will greatly help make these connections by delivering ultra-fast wireless access to all parts of our state.

People who have become accustomed to having high-speed Internet service may not be sensitive to the fact that it is not even available in some parts of Georgia. While it may not be economically viable for companies to connect every household through wired service, wireless provides anyone in reach of the signal the opportunity to access it. We are fortunate that AT&T is willing to make the investment needed to deliver next-generation service to a vast majority of the American population.

I hope you share with me the excitement about the possibilities that the next generation of high-speed wireless service and the impact that it can have on health care.

Sincerely,

Gregory J. Dent
President and CEO
