Dear FCC Commison

i urge to block this deal because i give u the following

Make no mistake about it, we're firmly against this deal. AT&T's excuse is spectrum, which is baloney since their real pain point is outdated infrastructure gear. T-Mobile has already turned on 42 Mbps HSPA+ in many markets and they're able to provide the same sort of download speeds that Verizon offers with LTE. You're telling us that AT&T needs more airwaves to offer better service? Bullshit. What saddens us is that the FCC doesn't yet have a comprehensive database available to the public that lists who owns which spectrum blocks. That information would paint a picture of AT&T looking to squash smaller players by buying up invisible air and then deciding not to build.

so we can't take this for any caution this deal with harm consumers so we are against this deal i urge fcc and DOJ take a look closely to block this deal if this deal get approved it will control 80% market share so i urge to take this support to block it not good for conusmer it free market to have choice of US Market AT&T has unused specturm so i urge FCC and DOJ to block it  
thank you for support i will look forward to answer your question look our blog [www.intomobile.com](http://www.intomobile.com)

thanks for support
