

The airwaves belong to the people, not to the monopolistic corporations!

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

L. Bagley  
4749 Trumbull S.E.  
Albuquerque, NM 87108

It is essential for the public that the FCC maintain the requirement for public inspection files for broadcasters.

This is especially so when one considers the safety issues for the public regarding radio stations in Miami, certain Spanish-language stations that help foment violence against members of the community who have different views from the broadcasters.

Why make it harder for the people to have information regarding broadcasting? It is a right that should be maintained.

Gloria La Riva

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Furthermore, FCC commissioners should be barred from working for companies who have just benefited from recent rulings.

mark walker  
713 Classon Ave, suite 307  
Brooklyn NY, NY 11238

I believe FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to the public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to that information by requiring stations to make the contents of the files available via the internet. I believe this will serve to not only maintain transparency, but also to improve the process by allowing more of the public to have access, especially any disabled citizens.

Your earnest attention to this matter is appreciated.

John Fitzpatrick  
6128 Roxbury Avenue  
West Springfield, VA 22152

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance. It ight also prevent broadcasters from disseminating a hidden political agenda in the name of news.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Harry S. Nydick

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

Cable providers shouldn't force consumers to pay for expensive sports or Spanish language programming by "bundling" it with movie and educational channels. We should be allowed to buy the channels we want to see "ala carte".

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

TIMOTHY DE MARTIN  
165 N KINGS AVE  
LINDENHURST, NY 11757

The public owns the airwaves. In order for a station to use these public assets citizens need to know how stations are using them. The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

STEPHEN NEWMAN  
1050 E SAN JOSE AVE  
BURBANK, CA 91501

The airwaves still belong to the public and the FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. This file contains information about the stations' programming, ownership structure, and compliance with FCC rules and regulations that are critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public.

In this day and age of electronic information exchange, the FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, but should also require stations to make the contents of the files available via the internet.

Nick Kleissas  
806 Cornell Dr  
Burbank, CA 91504

We the people expect the FCC to be the caretakers of our public airwaves. Inasmuch so, it is critical that the FCC maintain the 'public inspection file' requirement. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file is the only mechanism we the people have to obtain important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC must not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet. This added feature would require minimal effort on the part of the broadcasters and unless the broadcaster(s) have something to hide, it will provide a much better public image that will improve station ratings.

Marv Bronstein  
1504 New Durham Rd  
South Plainfield, NJ 07080

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Special attention should be made to the PSA credits that stations receive. I work at one of the 4 major network. Shows like ABC's Good Morning America, NBC's Today and CBS's Early Show along with prime time network news shows on all networks place PSA's in breaks that local O&O's and Affiliate stations roll over, in essence they never see the light of day, however the networks get credit for airing these spots because they are on the network log. They should be made to air PSA's to fulfill their obligation to the FCC.

Robert Crump  
17600 Willard St  
Northridge, CA 91325

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

**PLUS THE FCC SHOULD RE-INSTATE THE FAIRNESS DOCTRINE - SHOULD RE-INSTATE OWNERSHIP LIMITATIONS.**

**LOOK WHAT IS HAPPENING TO LOCAL NEWS - THE PUBLIC INTEREST IS NO LONGER BEING SERVED.**

Jim Diavastes  
81 Albion Ave  
Amherst, NY 14226

The current requirements for broadcasters to maintain a local public inspection file are important, and there is no reason that those who own the station can't provide this service

In fact, station owners should put all of this information up on the web, for the owners of the public airways to see. The information in the file should be MORE, not less, available to the public.

Stations must be required to meet their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, we need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Libby Sayre  
44 Domingo Ave.  
Berkeley, CA 94705

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

All the above is true, and I would like to add that removing the requirements to maintain those files and not make them more readily available to the public, who owns the "airwaves", is yet another step on the road to complete fascism in the USA. It allows broadcasters, who, over the past decade or two have become huge multimedia conglomerates at the expense of small local broadcasters, to hide yet more information from those of us who might bring them to task when we see bias or unethical behavior on their part. That, along with the loss of jobs in an economy not yet whole, would be catastrophic.

Thank you for your consideration,

Scott Gorn  
852 Farmington Avenue  
New Britain, CT 06053-1350

Ladies and Gentlemen,

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

I work for a newspaper and I appreciate the value of the information public records provide for the everyday Joe Six Pack citizen.

Media ownership is becoming more and more concentrated and therefore, I believe, less diverse.

The argument that record keeping is a burden for a media company is a joke. Broadcast companies keep detailed logs for the advertisers they sell to down, to the second of what they ran and when so they can sell/tell Tide, Corn Flakes, et al., just how much bang they got for their advertising buck.

Keeping records for the public provides bang for the buck for the public and is just essential.

Mark Learman  
13502 Coliseum Dr.  
Chesterfield, MO 63017

Broadcasters do not own the air waves; the radio spectrum in the United States belongs to its citizens. The FCC acts as the public's agent that issues licensed use of the citizens air waves in the service of the public.

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Cookie Cameron  
29868 Mission Bl.  
25870 Westview Way  
Hayward, CA 94544

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

ROBERT KAHABKA  
8285 ERICSON DR  
BUFFALO, NY 14221

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

PAUL COLLINS  
1510 N 3RD  
SAINT CHARLES, MO 63301-2116

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Philip Sorsen  
1400 Carpentier St #402  
San Leandro, CA 94577

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Michael Doherty  
50-57 43rd Street  
Woodside, NY 11377

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Paul Mark  
219 Paquette Ave  
Manchester, NH 03104

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Chicago, IL 60607

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Jennifer Downing  
70 Glen Ave  
Stockholm, NJ 07460

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Eugene Hauptman  
72nd avenue  
forest hills, NY 11375

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Larry D'Alessandro  
5 Kew ct  
Huntington, NY 11743

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

MICHAEL VAN HEULE  
70 DEL RAY DR  
LANDER, WY 82520

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Raymond Nassr  
1 Horizon Rd Apt 627  
Fort Lee, NJ 07024

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

karen toledo

In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Michele McDermott  
21628 Liverpool St.  
Ashburn, VA 20852

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Ronald Johnson  
513 Froelich pl.  
Elmont, NY 11003

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Atilano Villar  
264 Spook Rock Rd.  
Montebello, NY 10901

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

Gene Maxwell  
32 Pennsylvania Avenue  
Yonkers, NY 10707-2309

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. Glen Sandberg  
2514 19th Avenue  
Gulfport, MS 39501-5150

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

LEONARD BRYANT  
4002 Brewster Lane  
Waldorf, MD 20601

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file. While this burden may have been unavoidable 20 years ago, it is no longer necessary or justifiable given the prevalence of the internet.

The FCC should not only keep the requirement for broadcasters to maintain a physical public inspection file and its contents, it should facilitate public access to the information by requiring stations to make the contents of the files available via the internet.

michael cullen  
70 eighth st.  
ridgefield park, NJ 07660

The FCC should maintain its current requirements for broadcasters to maintain a local public inspection file. The public inspection file contains information about stations' programming, ownership structure, and compliance with FCC rules and regulations that is critical to public and FCC oversight of broadcaster performance.

The FCC depends on viewers and listeners to provide information about whether stations are meeting their public interest obligations to local communities. In order for citizens to engage with their local stations or to file complaints with the FCC, they need access to information about broadcast stations' activities and practices.

The public file contains important information that is not always easily accessible to the public. Some may have to travel up to 100 miles to visit a local station's public file.
