

I have been in the Public Safety technology industry for nearly 25 years. Reliable GPS is critical to public and first responder safety and must be protected. Public Safety agencies use GPS to locate and dispatch first responders to emergencies, locate first responders in distress, locate cellular 911 callers and marine incidents, and synchronize the clocks of thousands of devices on many public safety related systems. Testing has shown conclusively that LightSquared interferes with GPS. If LightSquared is permitted to move forward with its plan to use the spectrum near the GPS band the lives first responders and the public will be endangered.

Sincerely,

Carla Murphy
