

As owners of a small Land Surveying firm in Georgia, and by small I mean my wife and I, we feel the potential damage to our business and therefore our personal livelihood will be damaged by operation of LightSquared if it is allowed to proceed. We have invested \$50K in precision surveying GPS equipment. We have been able to survive an economy that has all but crippled the surveying and engineering industry. Our precision GPS surveying currently makes up over 50% of our annual revenue. The loss of this revenue will destroy our business and place us personally on the road to financial ruin. Please do not allow LightSquared to utilize spectrum adjacent to GPS bandwidth. The risk to all GPS services is not worth the ability to access the internet in remote areas. Internet service is NOT a necessity, but GPS service is. Thank you, Kenneth S. Robbins, President, Robbins Land Surveying, Inc.
