

The use of the GPS for landsurveying is critical to the nation's infrastructure and economic well-being. Implementing any practice that would jeopardize the integrity of GPS surveying would threaten our national security and first-world status.

As the City Engineer for Hurricane, Utah, I urge the FCC to not allow any broadcasting that would interfere with the band used for GPS surveying. Specifically, please be very vigilant and responsible in licensing LightSquared or any other company that would crowd the GPS surveying band.

If you wish for any clarification about my comments, please call or email.

Sincerely,

Arthur LeBaron
