

July 14, 2011

Dear FCC,

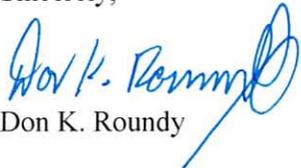

I use many GPS devices throughout the course of a day. I am a Professional Land Surveyor in the state of Utah. We have over \$200,000.00 invested in our GPS survey equipment in our office that would be useless if Lightsquared is allowed to broadcast on a frequency so close to the GPS frequency. I also have four handheld GPS's that I have purchased for my personal use as my family and I have developed a deep love for Geocaching. Geocaching is a treasure hunting game that has millions of members that use handheld GPS devices to locate hidden treasure boxes everywhere. It is a great activity for the whole family or anyone who is adventurous.

We also use GPS signals on a daily basis for navigation. I feel a lot more comfortable when my teenage daughter takes one of my Garmin GPS when she travels to an unfamiliar area.

I love my cell phone and everyone in my family has one but we as a family would prefer to give up our fast internet access on them and go back to having a phone be just a phone if that is what it takes to preserve our precious GPS signals.

PLEASE do not allow Lightsquared to destroy what has become such a great development for everyone.

Sincerely,

Don K. Roundy
