

LightSquared is telling half truths. * When they say the Surveying/GPS community did not disapprove of this plan they lie. The original plan that the GPS community did not disapprove of was a satellite system which morphed into this terrestrial tower system much later. * When they say they have a plan that addresses most of the problem they don't say that the part they don't fix is the interference with all our high precision receivers. ***They should not be allowed to wreck an entire industry without compensation to those they impact. Will Nash, LS. (VA 1966
