

I am a pilot and reliable GPS signals are fundamental to safety of flight. GPS has been around for a long time now and Lightsquared business wants to interfere with it now. The operations are not compatible as has been demonstrated. Lightsquared should find their own frequencies to use as not to disrupt fundamental services as aviation, navigation, safety, emergency responders and many more uses for GPS signals. I understand the need of the wireless capacity but it should not come at the expense of already available services. Furthermore that band adjacent to GPS should be protected from future development as to prevent this issue again.
