

GPS has become a highly valuable tool for me and everyone I know in getting around, finding businesses and unfamiliar locations; disabling it will cause a great deal of damage.

As an aviator with multiple licenses I rely on GPS for navigation, situational awareness and safety, and have invested significantly in multiple pieces of hardware that are dependent on the GPS.

While more broadband capacity may be important, seek solutions that do not disable a valuable system that is relied on by so many people. The proposal is unacceptable and stands to serve vendors not users. Find another avenue and/or frequency band for LightSquared to implement its ideas and operations without jeopardizing or damaging heavily-used existing systems of communication.
